 Narrative research is frequently described as a diverse enterprise, yet the kinds of narrative data that it bases itself on present a striking consensus: they tend to be autobiographical and

elicited in interviews. This book sets out to carve out a space alongside this narrative canon for stories that have not made it to the mainstream of narrative and identity analysis, yet they abound as well as being crucial sites of subjectivity in everyday interactional contexts. By labelling those stories as 'small', the book emphasizes their distinctiveness, both interactionally

and as an antidote to the tradition of 'grand' narratives research. Drawing primarily on the audio-recorded small stories of a group of female adolescents that was studied ethnographically in a town in Greece, the book follows a language-focused and practice-based approach in order to provide fresh answers and perspectives on some of the perennial questions of narrative

analysis: How can we (re)conceptualize the mainstay concepts of tellership, structure and evaluation in small stories? How do the participants' telling identities connect with their larger social identities? Finally, what does the project of storying self (and other) mean in small stories and how can it be best explored? *Clinical Dermatology* Edward Elgar Publishing Ultrasound

technology is enabling anesthesiologists to perform regional anesthetic procedures with greater confidence in accuracy and precision. With improvements in visualizing neural anatomy and needle movement, ultrasound guidance improves patient safety and operating room efficiency. This book offers a detailed, stepwise approach to this technique,

identifying pearls and pitfalls to ensure success. Topics are organized into four chapters. The first chapter provides the basic principles behind ultrasound guided regional anesthesia, setting a strong context for the rest of the book. The last three cover the nerve blocks: upper extremity, lower extremity, and chest, trunk and spine. Each nerve

block is comprehensively explained, divided up by introduction, anatomy, clinical applications, technique, alternate techniques, complications, and pearls. This new edition includes discussions of 6 new blocks: the suprascapular block, axillary nerve block for shoulder surgery, fascia iliaca block, lateral femoral cutaneous block, and the adductor canal block. This edition also contains

over 40 new procedural and imaging figures, an appendix on what blocks to perform for specific surgeries, and new information on choice of local anesthetic agent, types of catheters and practical ultrasound physics to help improve scanning. Ultrasound Guided Regional Anesthesia provides authoritative, in-depth coverage of ultrasound guided regional anesthesia for

the anesthesiologist beginning to use ultrasound and makes a great reference for the more seasoned physician. **Donne affette da endometriosis. This book describes and discusses

latest findings concerning the advantages as well as hazard and risk factors of contraception. The clinical impact of oral contraceptives on metabolism is particularly highlighted. In addition, behavioral methods, intrauterine devices, implants and modern approaches in animal and clinical research in the field of immunization against pregnancy are considered. Last, but not

least, the book summarizes the complex ethical, religious and political aspects of family planning and contraception. Ginecologia ambulatoriale Springer We live in a textually-mediated world where writing is central to society, its cultural practices and institutions. Writing has been the subject of much research but it is usually highly visible and valued

texts that are studied -- the work of novelists, poets and scholars. The studies included in this book examine every day acts of writing and their significance. Ordinary quotidian writing may be viewed as mundane and routine, but it is central to how societies operate and the ways individuals relate to each other and to institutions. Examples discussed in the book including

writing in areas such as farming, photo-sharing, childcare work and health care. The chapters are united in their approach to examining this writing as cultural practice. The book also brings together two important traditions of this type of study: the Anglophone and Francophone. The work of French scholars in this field is made accessible for the first time to the

Anglophone world. The insights and research in this collection will appeal to all linguists, anthropologists, sociolinguists and cultural theorists.

* What

explanations have been advanced for pain and what are their shortcomings?

* How do theoretical models account for apparent anomalies in the experience of pain? * What are the implications for clinical practice and how has practice guided theory?

Psychology has made an enormous contribution to the understanding of pain and its phenomena, mechanisms,

and treatments. This book explores and integrates current research in key areas of pain and pain management from a psychological perspective, and places recent developments in an historical context. The experience of pain cannot be captured in physiological terms, and treatments based on physical models are often inadequate. This book explores the multidimensio

nal nature of pain mechanisms, including the roles of past experience, culture and personality, and considers the implications for research and treatment. The approach is primarily theoretical, but with a significant emphasis on clinical practice and application. This balance is often lacking in comparable texts, and is enhanced by the professional and research background of

the authors. This clear and approachable text includes self-contained chapters that can be regarded as units of study and a unified glossary of terms completes the package. It is designed to provide a key resource for advanced undergraduate and postgraduate courses in health psychology, clinical psychology and social psychology as well as students and practitioners in health and

social welfare. Transferring Human Impedance Regulation Skills to Robots Springer This book explores the trials of Spanish democracy, focusing on the generation that came of age in the 1960s, assumed political power, and formed the first Socialist government in 1982. Starting in 1993, however, this popular government came under siege when scandals

shook the country's confidence in its legal and political institutions. **Cultural Mobility** Edizioni Mediterranee Donne affette da endometriosi. tradizionale cinese, da sola o associata alla più moderna tecnologia riproduttiva dell'Occidente. La cura dell'infertilità offre un metodo naturale per sostenere le donne nel concepimento. Usando tecniche semplici da seguire e rimedi che implicano l'alimentazione e l'uso delle erbe e della digitopressione, la dottoressa Randine Lewis mostra come migliorare la salute e il

benessere generali, rafforzare gli organi femminili e i sistemi vitali per la riproduzione, curare disturbi specifici che possono influire sulla fertilità, e perfino aiutare le più moderne tecnologie riproduttive utilizzate in Occidente come la fecondazione in vitro (FIVET) e la terapia ormonale. Con questo libro la dottoressa Lewis apre la porta a nuove idee sulla cura dell'infertilità che daranno

alle donne non solo la speranza, ma ciò che più desiderano: un figlio sano. A differenza dei tanti altri libri che difendono la causa di questo o quel regime alimentare, La cura dell'infertilità combina una grande varietà di terapie alternative: erbe, agopuntura, cambiamenti nell'alimentazione e lavoro sul corpo e sulla mente. Canto XXXV- Inferno Did food poisoning cause the Black Plague, the Salem witch-hunts, and other significant events in human history? In this pathbreaking book, historian Mary Kilbourne Matossian argues that epidemics, sporadic outbreaks of bizarre behavior, and low fertility and high death rates from the fourteenth to the eighteenth centuries may have been

caused by food poisoning from microfungi in bread, the staple food in Europe and America during this period. "A bold book with a stimulating thesis.

Matossian's claims for the role of food poisoning will need to be incorporated into any satisfactory account of past demographic trends."--John Walter, Nature "Matossian's work is innovative and original, modest and reasoned, and
