The #1 New York Times bestseller. Over 15 million copies sold! *Tiny Changes, Remarkable Results* No matter your goals, *Atomic Habits* offers a proven framework for improving--every day. James Clear, one of the world's leading experts on habit formation, reveals

practical strategies that will teach you exactly how to form good habits, break bad ones, and master the tiny behaviors that lead to remarkable results. If you're having trouble changing your habits, the problem isn't you. The problem is your system. Bad habits repeat themselves again and again not because you don't want to change, but because you have the wrong system for change. You do not rise to the level of your goals. You fall to the level of your systems. Here, you'll get a proven system that can take you to new heights. Clear is known for his ability to distill complex topics into simple behaviors that can be easily applied to daily life and work. Here, he draws on the most proven ideas from biology, psychology, and neuroscience to create an easy-to-understand guide for

making good habits inevitable and bad habits impossible. Along the way, readers will be inspired and entertained with true stories from Olympic gold medalists, award-winning artists, business leaders, life-saving physicians, and star comedians who have used the science of small habits to master their craft and vault to the top of their field. Learn how to: make time for new habits (even when life gets crazy); overcome a lack of motivation and willpower; design your environment to make success easier; get back on track when you fall off course; ...and much more. Atomic Habits will reshape the way you think about progress and success, and give you the tools and strategies you need to transform your habits--whether you are a team looking to win a championship, an

organization hoping to redefine an industry, or simply an individual who wishes to quit smoking, lose weight, reduce stress, or achieve any other goal. *Crossing the Quality Chasm* Univ of California Press

The Literature Review SAGE

Description: The Association of Theological Schools states, The purpose of the Doctor of Ministry degree is to enhance the practice of ministry for persons who hold the MDiv degree and have engaged in ministerial leadership. The goals an institution adopts for the DMin should include an advanced understanding of the nature and

purposes of ministry, enhanced competencies in pastoral analysis and ministerial skills, the integration of these dimensions into the theologically reflective practice of ministry, new knowledge about the practice of ministry, and continued growth in spiritual maturity . . . The program shall include the design and completion of a written doctoral-level project that addresses both the nature and the practice of ministry. The project should be of sufficient quality that it contributes to the practice of ministry as judged by professional standards and has the potential for application in other contexts of ministry. Doctor of Ministry projects are a type of participatory action research that introduces an intervention in order to provide

ministerial leadership for the transformation of the organization. The intent of *Qualitative Research: A Multi-Methods Approach for Doctor of Ministry Projects* is to provide the fundamentals of qualitative research so that significant projects and theses emerge.

Endorsements: "Finally! A much-needed resource for Doctor of Ministry programs, this comprehensive text offers a detailed account of the components and purpose of Doctor of Ministry projects . . . His attention to forming mature theological thinkers and critically reflexive researcher-practitioners has the power to enhance the quality and credibility of Doctor of Ministry research projects. Sensing's clarity of thought, purpose, and writing style make this text an excellent resource for both students and

faculty." --Lorraine Ste-Marie Assistant Professor on the Faculty of Human Sciences Saint Paul University, Ottawa, Ontario "In this volume Dr. Sensing clearly and thoughtfully lays out the process for developing and writing a Doctor of Ministry project thesis. The book focuses primarily on various qualitative research methodologies describing them and giving specific examples of their use. The multi-methods approach he takes allows for both the flexibility and the rigor necessary to produce a quality thesis. Sensing is committed to projects that are grounded in solid theological foundations and implemented in local ministry contexts. This is a must read book for DMin students and advisers." -- Dave Bland Professor of Homiletics

Harding University School of Theology
"Tim Sensing has written a major textbook for every seminary's Doctor of Ministry program. Appreciating the strengths and limitations of these programs, Sensing offers a guide and sourcebook for students in designing and writing their project theses. Equally important is his approach to the degree and project in which the student is a practical theologian engaging theology as a communal, formative, critical, and public activity. The church desperately needs quality doctoral work producing rigorous research that contributes to the practice of ministry. Those who share this goal have a valuable new resource." --Lovett H. Weems Jr.
Distinguished Professor of Church Leadership Wesley Theological

Seminary, Washington DC About the Contributor(s): Tim Sensing (DMin, PhD) is the Director of Academic Services and Professor of Homiletics at the Graduate School of Theology located on the campus of Abilene Christian University. Tim has taught research methodologies for the Doctor of Ministry program since 1999.

Interfaith Family Journal University of Chicago Press

This book offers a highly revealing and troubling view of today's high school students and the ways they pursue high grades and success. Denise Pope, veteran teacher and curriculum expert, follows five motivated and successful students through a school year, closely shadowing them and engaging them in lengthy reflections on their school

experiences. What emerges is a double-sided picture of school success. On the one hand, these students work hard in school, participate in extracurricular activities, serve their communities, earn awards and honours, and appear to uphold school values. But on the other hand, they feel that in order to get ahead they must compromise their values and manipulate the system by scheming, lying, and cheating. In short, they do school, that is, they are not really engaged with learning nor can they commit to such values as integrity and community. The words and actions of these five students - two boys and three girls from diverse ethnic and socioeconomic backgrounds - underscore the frustrations of being caught in a grade trap that pins future

success to high grades and test scores. Their stories raise critical questions that are too important for parents, educators, and community leaders to ignore. Are schools cultivating an environment that promotes intellectual curiosity, cooperation, and integrity? Or are they fostering anxiety, deception, and hostility? Do today's schools inadvertently impede the very values they claim to embrace? Is the success that current assessment practices measure the kind of success we want for our children?

Calling Bullshit Ashgate Publishing, Ltd.

Bullshit isn't what it used to be. Now, two science professors give us the tools to dismantle misinformation and think clearly in a world of fake news and bad data. "A modern classic . . . a straight-talking survival guide to the mean streets of a dying democracy and a global pandemic."—Wired
Misinformation, disinformation, and fake news abound and it's increasingly

difficult to know what's true. Our media environment has become hyperpartisan. Science is conducted by press release. Startup culture elevates bullshit to high art. We are fairly well equipped to spot the sort of old-school bullshit that is based in fancy rhetoric and weasel words, but most of us don't feel qualified to challenge the avalanche of new-school bullshit presented in the language of math, science, or statistics. In *Calling Bullshit*, Professors Carl Bergstrom and Jevin West give us a set of powerful tools to cut through the most intimidating data. You don't need a lot of technical expertise to call out problems with data. Are the numbers or results too good or too dramatic to be true? Is the claim comparing like with like? Is it confirming your personal bias? Drawing on a deep

well of expertise in statistics and computational biology, Bergstrom and West exuberantly unpack examples of selection bias and muddled data visualization, distinguish between correlation and causation, and examine the susceptibility of science to modern bullshit. We have always needed people who call bullshit when necessary, whether within a circle of friends, a community of scholars, or the citizenry of a nation. Now that bullshit has evolved, we need to relearn the art of skepticism.

This publication;the latest report from AAC&U;s Liberal Education and America;s Promise (LEAP) initiative;defines a set of educational practices that research has

demonstrated have a significant impact on student success. Author George Kuh presents data from the National Survey of Student Engagement about these practices and explains why they benefit all students, but also seem to benefit underserved students even more than their more advantaged peers. The report also presents data that show definitively that underserved students are the least likely students, on average, to have access to these practices.
