Competency Management for the Emergency Department Springer

Dr. Goldsworthy has created a state-of-the-art issue that emphasizes the nurse's role in mechanical ventilation. Pertinent clinical topics include the following: basics of mechanical ventilation for nurses; current modes for mechanical ventilation; best practices for managing pain, sedation, and delirium in the mechanically ventilated patient; mobilization of and optimal

oxygenation for the mechanically ventilated patient; managing complications; and effective weaning strategies. Authors also address mechanical ventilation in both children and neonates.

The current content in this issue will leave nurses with the clinical information they need to effectively manage mechanically ventilated patients.

Advanced Skills and Competency Assessment for Caregivers F.A. Davis

Clinical Skills for Healthcare Assistants is an accessible, easy to read guide, outlining the fundamental and core skills integral to clinical practice. Divided into three sections, the first looks at fundamental skills applicable to all staff, such as accountability, communication and record keeping. Section two explores core clinical skills for example respiratory care, pulse, blood glucose management, catheter care, and fluid balance. Section three outlines complex clinical skills that require more in-depth training and may be restricted to specialist areas of practice, such as medication, and intravenous cannulation. Each chapter follows the same easy to use structure, starting with the aims and objectives of the chapter, followed by the explanation of why the skill is performed, relevant anatomy and physiology, related aspects and terminology, how to perform the

skill and common problems. Aimed primarily at healthcare assistants, this will also be a useful resource for newly qualified practitioners and students in health and social care.

As the field of pulmonary rehabilitation has continued to advance and evolve, standards for patient care and for programs have become increasingly important. Guidelines for Pulmonary Rehabilitation Programs, Fifth Edition With Web Resource, offers the best practices for patient care and serves as the must-have resource for programs to prepare for the American Association of Cardiovascular and Pulmonary Rehabilitation (AACVPR) pulmonary rehabilitation program certification. Readers will learn to tailor individualized care for respiratory patients as well as to improve new programs or update existing programs. For this revised fifth edition, AACVPR has assembled an expert team of nationally and internationally recognized authors. Together, they present the individualized and interrelated components of pulmonary rehabilitation, including initial and ongoing assessment, collaborative self-management education, exercise training, psychosocial support, and outcome measurement. Highlighted guidelines have been included

throughout the book, giving readers easy-to-find guidance for implementing treatment programs and helping patients stay on track. Guidelines for Pulmonary Rehabilitation Programs, Fifth Edition With Web Resource, offers an evidence-based review in several areas based on the rapid expansion of high-quality scientific evidence since the last edition. To learn best practices for care and program development, readers will find contributions from expert pulmonary rehabilitation professionals in nursing, medicine, physical therapy, respiratory therapy, and exercise physiology. This text provides a scientific, practical framework to help aspiring and current practitioners do the following: Understand the current requirements for accrediting pulmonary-based facilities Design, implement, or update accredited pulmonary rehabilitation programs Deliver optimal care to patients with symptomatic respiratory needs Address program issues in exercise, outcomes, and management of pulmonary-based programs New to this edition, a web resource provides easy access to practical checklists from the book and offers biannual updates to keep programs current with key changes in the field. The reorganized content provides a more logical flow of information consistent with pulmonary rehabilitation development. A new chapter on nutrition helps readers to understand its importance in the rehab process and to provide rehab patients with the best opportunity for success. In the updated appendixes, readers will find a comprehensive set of forms, questionnaires, and assessment tools. With continued advancements in the science, application, and credentialing of pulmonary rehabilitation programs, the fifth edition of Guidelines for Pulmonary Rehabilitation Programs will assist respiratory practitioners in remaining up to date on the best practices in the field. This edition supports practitioners in understanding the components of pulmonary rehabilitation and applying best practices as well as updating and improving their programs to meet AACVPR certification requirements.

This is the first book exploring the unique dynamics created by a multidisciplinary trauma team and how crisis management strategies can improve teamwork and communication and, potentially, improve patient resuscitation outcomes. Crisis resource management (CRM) is integral to the way that we manage ourselves, team members, and patients during emergency situations.

It is essentially the ability to translate knowledge of what needs to be done into effective actions during a crisis situation. Building on the revolutionary American College of Surgeons Advanced Trauma Life Support (ATLS®) course, Trauma Team Dynamics illustrates the integration of the principles of CRM to team dynamics throughout the resuscitation —from the scene, through pre-hospital care and transport, to the trauma bay, and finally to definitive care and beyond. The editors and contributors are international experts in trauma, critical care, emergency medicine, nursing, respiratory therapy, and pre-hospital care and include NASA- and United States military-affiliated experts. Trauma Team Dynamics is intended for use as both a day-to-day clinical resource and a reference text, and includes self-assessment questions as well as guidance on CRM curriculum design and implementation.

Professional Nursing Concepts: Competencies for Quality Leadership takes a patient-centered, traditional approach to the topic of nursing education and professional development. This dynamic text engages students in recognizing the critical role that nurses play in healthcare delivery. Divided into four sections, this text has a unique framework and exclusively covers the Institute of Medicine's (IOM) five core competencies on quality and healthcare for all healthcare professionals. The first section introduces students to the history of the nursing profession, and covers such topics as nursing education, regulation, and accreditation. Section two explores the healthcare context in which nursing is practiced including continuum of care, health promotion, disease prevention, and illness, nursing ethics, and the nurse's role in health policy. The third section focuses on each of the five core competencies set forth by the IOM, and the final section focuses on the practice of nursing today and in the future particularly exploring the critical issue of the nursing shortage and the transformation of nursing practice.
