Ongoing Crisis Communication

McGraw-Hill Science/Engineering/Math
 Thirteen years have passed since the seminal book on knapsack problems by Martello and Toth appeared. On this occasion a former colleague exclaimed back in 1990: "How can you write 250 pages on the knapsack problem?" Indeed, the definition of the knapsack problem is

easily understood even by a non-expert who will not suspect the presence of challenging research topics in this area at the first glance. However, in the last decade a large number of research publications contributed new results for the knapsack problem in all areas of interest such as exact algorithms, heuristics and approximation schemes. Moreover, the extension of the knapsack problem to higher dimensions both in the number of constraints and in the number of knapsacks, as well as the modification of the problem structure concerning the available item set and the objective function, leads to a number of interesting variations of practical relevance which were the subject of intensive research during the last few years. Hence, two years ago the idea arose to produce a new monograph covering not only the most

recent developments of the standard knapsack problem, but also giving a comprehensive treatment of the whole knapsack family including the siblings such as the subset sum problem and the bounded and unbounded knapsack problem, and also more distant relatives such as multidimensional, multiple, multiple-choice and quadratic knapsack problems in dedicated chapters. *Industrial Engineering* Springer Science & Business Media
 This book contains a selection of refereed papers presented at the "International Conference on Operations Research (OR 2014)", which took place at RWTH Aachen University, Germany, September 2-5, 2014. More than 800 scientists and students from 47 countries attended OR 2014 and presented more than 500 papers in parallel topical streams, as well as

special award sessions. The theme of the conference and its proceedings is "Business Analytics and Optimization".

Hand and Wrist Arthroscopy, An Issue of Hand Clinics Springer Nature

Global Logistics Management focuses on the evolution of logistics in the last two decades, and highlights recent developments from a worldwide perspective. The book details a wide range of application-oriented studies, from metropolitan bus routing problems to relief logistics, and introduces the state of the art on some classical applications. The book addresses typical logistic problems, most specifically the vehicle routing problem (VRP), followed by a series of analyses and discussions on various logistics problems plaguing airline and marine systems. The text addresses problems encountered in continuous space, and discusses the issue of consolidation, scheduling, and replenishment decisions together with routing. It proposes a methodology that supports decision making at a tactical and operational level associated with daily inventory management, and also examines the three-echelon logistic network. This material provides numerous examples and additional topics that include: An analysis for the airline industry and a novel approach for airline logistics including fare pricing and seat inventory control The berth-crane allocation problem in container terminals A marine system logistics application Ice navigation problems and factors that affect ice navigation Pharmaceutical warehouse route design problems An application in healthcare logistics in which medical suppliers are evaluated through a fuzzy linguistic representation model A real data-driven simulation model that outputs a new shuttle system A model that integrates routing and batching problems Joint replenishment and transportation problems Global Logistics Management clearly illustrates logistic problems encountered in many different application areas, and provides you with the latest advances in classical applications.

Facilities Design Springer Nature

This volume contains the proceedings of the fifth International Workshop on Distributed Algorithms (WDAG '91) held in Delphi, Greece, in October 1991. The workshop provided a forum for researchers and others interested in distributed algorithms, communication networks, and decentralized systems. The aim was to present recent research results, explore directions for future research, and identify common fundamental techniques that serve as

building blocks in many distributed algorithms. The volume contains 23 papers selected by the Program Committee from about fifty extended abstracts on the basis of perceived originality and quality and on thematic appropriateness and topical balance. The workshop was organized by the Computer Technology Institute of Patras University, Greece.

Performance Analysis of Manufacturing Systems McGraw-Hill Science, Engineering & Mathematics

The first edition of this book was the first text to be written on the Arena software, which is a very popular simulation modeling software. What makes this text the authoritative source on Arena is that it was written by the creators of Arena themselves. The new third edition follows in the tradition of the successful first and second editions in its tutorial style (via a sequence of carefully crafted examples) and an accessible writing style. The updates include thorough coverage of the new version of the Arena software (Arena 7.01), enhanced support for Excel and Access, and updated examples to reflect the new version of software. The CD-ROM that accompanies the book contains the Academic version of the Arena software. The software features new capabilities such as model documentation, enhanced plots, file reading and writing, printing and animation symbols.

Tool and Manufacturing Engineers Handbook: Material and Part Handling in Manufacturing Springer

This issue of *Hand Clinics*, edited by Drs. Clara Wong and Pak-Cheong Ho, will cover *Hand and Wrist Arthroscopy*. Topics discussed in the volume include, but are not limited to: Diagnostic Wrist Arthroscopy; Arthroscopic Management of Perilunate Injuries; Arthroscopic SL Ligament Reconstruction; Arthroscopic Management of TFCC Foveal Injury; TFCC Repair; Arthroscopy in Kienbock's Disease; Arthroscopic Synovectomy in Rheumatoid Arthritis; Arthroscopic Limited Carpal Fusion; Arthroscopic Management of STTJ Arthritis; Role of Finger Joint Arthroscopy; and Complication of Wrist and Hand Arthroscopy, among others.

Research Methods and Solutions to Current Transport Problems Springer Nature

The impact of extraterrestrial material on Earth can lead to effects traceable in both the geological and biological record. This study describes meteorite flux with time, covering small and large bodies capable of producing craters. The effects of impacts on the environment is also covered focusing specifically on the Cretaceous-

Tertiary mass extinction event.

Knapsack Problems Society of Manufacturing Engineers

Manufacturing industries are devoted to producing high-quality products in the most economical and timely manner. Quality, economics, and time not only indicate the customer-satisfaction level, but also measure the manufacturing performance of a company. Today's manufacturing environments are becoming more and more complex, flexible, and information-intensive. Companies invest into the information technologies such as computers, communication networks, sensors, actuators, and other equipment that give them an abundance of information about their materials and resources. In the face of global competition, a manufacturing company's survival is becoming more dependent on how best this influx of information is utilized. Consequently, there evolves a great need for sophisticated tools of performance analysis that use this information to help decision makers in choosing the right course of action. These tools will have the capability of data analysis, modeling, computer simulation, and optimization for use in designing products and processes. International competition also has had its impact on manufacturing education and the government's support of it in the US. We see more courses offered in this area in industrial engineering and manufacturing systems engineering departments, operations research programs, and business schools. In fact, we see an increasing number of manufacturing systems engineering departments and manufacturing research centers in universities not only in the US but also in Europe, Japan, and many developing countries.

Handbook of Simulation Springer Science & Business Media

The book is dedicated as an auxiliary literature for academic staff of universities, research institutes, as well as for students of transport teaching. The aim of the conference was to present the achievements of national and foreign research and scientific centers dealing with the issues of rail, road, air and sea transport in technical and technological aspects, as well as organization and integration of the environment conducting research and education in the discipline of civil engineering and transport.

International Scientific Conference Transport of the 21st Century was held in Ryn, Poland, in the 9th-12th of June 2019. The research areas of the conference were as follows: • transport infrastructure and

communication engineering, • construction and operation of means of transport, • logistics engineering and transport technology, • organization and planning of transport, including public transport, • traffic control systems in transport, • transport telematics and intelligent transportation systems, • smart city and electromobility, • safety engineering and ecology in transport, • automation of means of transport. It also used by specialists from central and local government authorities in the area of deepening knowledge of modern technologies and solutions used for planning, managing and operating transport.

largenumberofhumanandeconomicactivitie
s. Inthisbook,authorstryto illustrate some
advanced logistics and supply chain
management topics, recently mentioned
by academic and industrial personnel. This
book has been organized in 12 chapters
such that the reader can study each
chapter not only independently as shown
in Fig. 1; but also as part of a whole. If
someone wants to study the book more
deeply, the suggested approach for this
study is shown in Fig. 2. So the readers of
this book may be divided into at least two
groups: (1) students in Master's courses or
higher, who can use this book in their
courses as a whole, and (2) experts who
want to learn more about a new topic in
logistics and supply chain management;
this group may want to read a chapter
about a special topic that is found in this
book. In the context of global competition,
the more latent topics in logistics supply
chain management are fast growing. This
book falls within this perspective and
presents 12 chapters that well illustrate
the variety and complexity of these topics.
This book is organized as follows: Chapter
1 introduces logistics and supply chain
management and contains some primal
de?nitions about these two concepts;
some obstacles, prerequisites and
infrastructures of modernized logistics and
supply chain management and global
supply chain management are illustrated.

**Integer Programming and
Combinatorial Optimization** CRC Press
Delineating the proper design, layout, and
location of facilities, this book strikes a
healthy balance between theory and
practice. It provides an understanding of
the practical aspects of implementing
preliminary designs development through
analytical models. The third edition of a

bestseller, it features updated multimedia
tools, new software, an
Logistics of Production and Inventory
Springer Science & Business Media
This book focuses on guidelines for
reducing the energy consumption in
warehousing processes. It presents a
model of formal assessment for energy
consumption in the context of storage-
system logistics, as well as a
computational model consisting of three
sub-models: energy consumption models
for forklifts and stacker cranes,
respectively, and an energy intensity
model for roller conveyors. The concept
model is based on the assumption that the
unit load is received at a zero-energy
warehouse. Subsequent handling,
transport and storage processes, in which
the unit load is moved vertically and
horizontally through the system, equate to
changes in energy intensity within the
logistics warehouse management system.
Energy recovery based on the handling
equipment used can be collected in
batteries. The evaluation method takes
into account the intensity of the energy
supplied to the logistics system and
reduces the storage of the recovered
energy - this figure represents the energy
needed to pass through the logistics unit
load storage system, and can be
expressed in an energy intensity map.
Ant Colony Optimization Springer
Handbook

Global Logistics Management John
Wiley & Sons

Combinatorial Engineering of
Decomposable Systems presents a
morphological approach to the
combinatorial design/synthesis of
decomposable systems. Applications
involve the following: design (e.g.,
information systems; user's interfaces;
educational courses); planning (e.g.,
problem-solving strategies; product life
cycles; investment); metaheuristics for
combinatorial optimization; information
retrieval; etc.

Evolutionary Computation in Combinatorial
Optimization Springer Science & Business
Media

The book is devoted to the problem of
manufacturing scheduling, which is the
efficient allocation of jobs (orders) over
machines (resources) in a manufacturing
facility. It offers a comprehensive and
integrated perspective on the different
aspects required to design and implement
systems to efficiently and effectively
support manufacturing scheduling
decisions. Obtaining economic and reliable
schedules constitutes the core of
excellence in customer service and
efficiency in manufacturing operations.

Therefore, scheduling forms an area of
vital importance for competition in
manufacturing companies. However, only
a fraction of scheduling research has been
translated into practice, due to several
reasons. First, the inherent complexity of
scheduling has led to an excessively
fragmented field in which different sub
problems and issues are treated in an
independent manner as goals themselves,
therefore lacking a unifying view of the
scheduling problem. Furthermore,
mathematical brilliance and elegance has
sometimes taken preference over
practical, general purpose, hands-on
approaches when dealing with these
problems. Moreover, the paucity of
research on implementation issues in
scheduling has restricted translation of
valuable research insights into industry.
"Manufacturing Scheduling Systems: An
Integrated View on Models, Methods and
Tools" presents the different elements
constituting a scheduling system, along
with an analysis the manufacturing
context in which the scheduling system is
to be developed. Examples and case
studies from real implementations of
scheduling systems are presented in order
to drive the presentation of the theoretical
insights. The book is intended for an
ample readership including industrial
engineering/operations post-graduate
students and researchers, business
managers, and readers seeking an
introduction to the field.

Artificial Intelligence in Design SAGE

Get the expert advise you need to shrink
handling costs, reduce downtime and
improve efficiency in plant operations!
You'll use this comprehensive handbook
during post design, process selection and
planning, for establishing quality controls,
tests, and measurements, to streamline
production, and for managerial decision-
making on capital investments and new
automated systems.

Semiannual, with semiannual and annual
indexes. References to all scientific and
technical literature coming from DOE, its
laboratories, energy centers, and
contractors. Includes all works deriving
from DOE, other related government-
sponsored information, and foreign
nonnuclear information. Arranged under
39 categories, e.g., Biomedical sciences,
basic studies; Biomedical sciences, applied
studies; Health and safety; and Fusion
energy. Entry gives bibliographical
information and abstract. Corporate,
author, subject, report number indexes.

TRIZ - The Theory of Inventive

Problem Solving Springer Science & Business Media

Since the publication of the first edition in 1982, the goal of *Simulation Modeling and Analysis* has always been to provide a comprehensive, state-of-the-art, and technically correct treatment of all important aspects of a simulation study. The book strives to make this material understandable by the use of intuition and numerous figures, examples, and problems. It is equally well suited for use in university courses, simulation practice, and self study. The book is widely regarded as the "bible" of simulation and now has more than 100,000 copies in print. The book can serve as the primary text for a variety of courses; for example:

- A first course in simulation at the junior, senior, or beginning-graduate-student level in engineering, manufacturing, business, or computer science (Chaps. 1 through 4, and parts of Chaps. 5 through 9). At the end of such a course, the students will be prepared to carry out

complete and effective simulation studies, and to take advanced simulation courses.

- A second course in simulation for graduate students in any of the above disciplines (most of Chaps. 5 through 12). After completing this course, the student should be familiar with the more advanced methodological issues involved in a simulation study, and should be prepared to understand and conduct simulation research.
- An introduction to simulation as part of a general course in operations research or management science (part of Chaps. 1, 3, 5, 6, and 9).

Government Reports Announcements & Index Springer

This volume contains the papers selected for presentation at IPCO 2002, the Ninth International Conference on Integer Programming and Combinatorial Optimization, Cambridge, MA (USA), May 27-29, 2002. The IPCO series of conferences highlights recent developments in theory, computation, and application of integer programming and combinatorial

optimization. IPCO was established in 1988 when the first IPCO program committee was formed. IPCO is held every year in which no International Symposium on Mathematical Programming (ISMP) takes place. The ISMP is triennial, so IPCO conferences are held twice in every three-year period. The eight previous IPCO conferences were held in Waterloo (Canada) 1990, Pittsburgh (USA) 1992, Erice (Italy) 1993, Copenhagen (Denmark) 1995, Vancouver (Canada) 1996, Houston (USA) 1998, Graz (Austria) 1999, and Utrecht (The Netherlands) 2001. In response to the call for papers for IPCO 2002, the program committee received 110 submissions, a record number for IPCO. The program committee met on January 7 and 8, 2002, in Aussois (France), and selected 33 papers for inclusion in the scientific program of IPCO 2002. The selection was based on originality and quality, and reflects many of the current directions in integer programming and combinatorial optimization research.
