The Future of Nursing Mosby

"Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need to know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)." - online AHRQ blurb, <http://www.ahrq.gov/qual/nursesfdbk/>

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles-including limits on nurses' scope of practice-should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Over the past 20 years, nursing has begun to rediscover some of its basic 'truths' which have become obscured because of the rise in technology and medical knowledge this century. One of these basic 'truths' is the concern of this book - that intelligent, sensitive nursing does make a difference to the consumers of health care. Like most essential truths, this seems almost too obvious to be stated. Nevertheless, many nurses have become increasingly aware of a commonly held view that 'getting better' or staying healthy is largely dependent upon the intervention of or monitoring by medical practitioners and paramedical therapists together with the technology they use and that nurses merely carry out the orders of such workers and keep things in order. An apt analogy, frequently used, is that of the air journey. The point of the journey is to get from A to B and is largely dependent upon the aeroplane (i.e. the technology in health care) and the crew in the cockpit (i.e.
