What happens to a successful woman when her world falls apart and she is faced with betrayal, breast cancer, and prison? What happens when her pain is unimaginable and her choices look bleak. When all this happened to Sue Ellen Allen, she chose to turn her pain into power. The death of Gina, her young roommate, coupled with an atmosphere of darkness and negativity, led her to find her passion and purpose behind the bars. Her experience of cancer, prison, and Gina's death is an inspirational story of courage, wisdom, and choices.

This comprehensive book is devoted to revision total joint arthroplasty and provides state-of-the-art guidance in a field where level-I evidence is difficult to produce. In the book's respective sections, each of which focuses on a specific joint - the knee, hip, shoulder, elbow, or ankle - readers will learn how to manage these complex surgical techniques. Each section thoroughly describes the epidemiology, causes and surgical techniques, as well as clinical results and complications. Filling an important gap in a rapidly evolving field, this book will appeal to all healthcare workers involved in the care of affected patients, including orthopedic surgeons and fellows, rehabilitation specialists, pain physicians, podiatrists and nurses.

The desire to expose the spine for surgery by anterior approaches at any level between the head and the sacrum is not new. Spinal pathology is often located anterior to the spinal cord and nerve roots in the cervical and thoracic spine, and anterior to the peripheral nerves that emerge from the lumbosacral spine below the first lumbar vertebra. To treat such pathology one prefers to expose the front of the spine directly and widely enough to eradicate the pathology and to have full control of bleeding throughout the procedure. The posterior elements of the spine are important for mechanical stability of the spine, and therefore for the protection of the neural and vascular structures in the spine that would be threatened by instability. Extensive eradication of pathology posterior to the spinal canal and the intervertebral foraminae, including the transverse processes, may leave no adequate bony bed for the surgical creation of a stabilizing osseous fusion. In such a situation, an anterior fusion procedure is the only viable alternative to a posterior or posterolateral fusion. In situations where it is critically important to obtain a stable fusion, as in tuberculosis of the spine, both an anterior and a posterior fusion operation at the same motion segments is, in almost every instance, a guarantee of a stable osseous fusion. One should know both approaches.

Abstract: A series of thirteen interviews explores the reasons for the popularity of the vegetarian diet. The interviewees' accounts for reasons for turning to vegetarianism with discussions of effects on personal lives and careers are included. Vegetarianism is now a fad. However, fads often become custom. Meat eating habits resulted from post-medieval nobility's meat-eating conventions. Eventually, the patterns were initiated by lower classes until the harm was established. Middle-class families now have gout, obesity, heart disease, and cancer that was once common only among the nobility. Changed dietary patterns can result in fewer mental and physical ills. Introductory prefaces to each interview give background information on the famous personality and lists accomplishments.

Abstract: As part of a series of studies authorized by Congress and conducted by the National Center for Health Statistics, the Second National Health and Nutrition Examination Survey (NHANES II) was conducted (similarly to NHANES I). Information on dietary intake patterns was collected and various hematological and biochemical tests, anthropometric measurements, and clinical assessments were made. An important change in approach to nutritional assessments was to investigate anemia in more detail than in NHANES I. Other major target conditions are described. Topics covered are: the sample design for NHANES II, operational plan, quality control, pilot testing and plan for analysis and publication of data. Appendixes include forms used by survey personnel. [The Beauty Myth](#) Harper Collins

More than four centuries have passed since Shakespeare wrote his glorious plays, and it is little wonder that the meaning of many of the references in them escapes modern audiences. That's a shame, because they are packed with cryptic allusions to the fascinating people, dramatic events, juicy gossip, lurid scandals, gripping court battles, treacherous conspiracies and outrageous acts of insolence he encountered during his lifetime. To know these background stories is to understand

and enjoy his works so much more. In *Secret Will*, Paul Chapman peels back the curtain to reveal the real Shakespeare and the world that lies hidden behind those quill-scratched pages. He does so by examining key passages from the plays and then asking searching questions about how they relate to the tempestuous times in which he lived. Why, for instance, does *A Midsummer Night's Dream* contain clear references to the illicit love affair between Elizabeth I and Robert Dudley? How might one of the biggest earthquakes in the history of the British Isles have inspired intriguing lines in *Romeo and Juliet*? Has Shakespeare immortalised as Ophelia a young woman named Katherine Hamlett, who drowned when he was young? How is a speech in *Hamlet* connected to the brazen abduction of an Elizabethan schoolboy? Does Shakespeare pour out the raw grief he feels over the death of his young son in heartbreaking lines in *King John*? Should his most famous stage direction - 'Exit, pursued by a bear' - actually read 'Exit, pursued by a polar bear'? Is he teasing us with a veiled clue to the identity of the mysterious 'Dark Lady' of his desires in *Twelfth Night*? What do his plays tell us about London's sleazy sex industry, with its legions of prostitutes known as Winchester Geese? Why was the famous Globe theatre threatened by a courtroom drama alleging it was built using stolen timbers, and what led to it burning down? Did a rancorous legal battle between three feuding sisters over their senile father's estate inspire the towering tragedy that is *King Lear*? And what in the world was the dancing horse? These, and many more such questions, are answered in *Secret Will*. As well as being a fascinating work of biography, *Secret Will* has the flavour of a detective saga with all its hints and clues. Links to quotes from Shakespeare's works make the book a gripping page turner for both the aficionado and casual reader alike. 'All the world's a stage,' Shakespeare once wrote. *Secret Will* reveals the astonishing story of how he really did put his world on the stage. Readers of this book may never watch a play by the Bard in same way again.

Masters Theses in the Pure and Applied Sciences was first conceived, published, and disseminated by the Center for Information and Numerical Data Analysis and Synthesis (CINDAS) * at Purdue University in 1957, starting its coverage of theses with the academic year 1955. Beginning with Volume 13, the printing and dissemination phases of the activity were transferred to University Microfilms/Xerox of Ann Arbor, Michigan, with the thought that such an arrangement would be more beneficial to the academic and general scientific and technical community. After five years of this joint undertaking we had concluded that it was in the interest of all concerned if the printing and distribution of the volume were handled by an international publishing house to assure improved service and broader dissemination. Hence, starting with Volume 18, Masters Theses in the Pure and Applied Sciences has been disseminated on a worldwide basis by Plenum Publishing Corporation of New York, and in the same year the coverage was broadened to include Canadian universities. All back issues can also be ordered from Plenum. We have reported in Volume 25 (thesis year 1980) a total of 10,308 theses titles from 27 Canadian and 214 United States universities. We are sure that this broader base for theses titles reported will greatly enhance the value of this important annual reference work. While Volume 25 reports theses submitted in 1980, on occasion, certain universities do report theses submitted in previous years but not reported at the time.
