How science
consultants make

movie science
plausible, in films
ranging from 2001: A
Space Odyssey to
Finding Nemo. Stanley
Kubrick's 2001: A
Space Odyssey,
released in 1968, is
perhaps the most
scientifically accurate
film ever produced.

The film presented such a plausible, realistic vision of space flight that many moon hoax proponents believe that Kubrick staged the 1969 moon landing using the same studios and techniques. Kubrick's scientific verisimilitude in 2001 came courtesy of his science consultants--including two former NASA scientists--and the more than sixty-five companies, research organizations, and government agencies that offered technical advice. Although most filmmakers don't consult experts as extensively as Kubrick did, films ranging from *A Beautiful Mind* and *Contact* to *Finding Nemo* and *The Hulk* have achieved some degree of scientific credibility because of

science consultants. In *Lab Coats in Hollywood*, David Kirby examines the interaction of science and cinema: how science consultants make movie science plausible, how filmmakers negotiate scientific accuracy within production constraints, and how movies affect popular perceptions of science. Drawing on interviews and archival material, Kirby examines such science consulting tasks as fact checking and shaping visual iconography. Kirby finds that cinema can influence science as well: Depictions of science in popular films can promote research agendas, stimulate technological development, and even stir citizens into political action.

2001: A Space Odyssey combines meticulous science, limitless imagination, and pure visual majesty. This compendium, previously available as a Collector's Edition, contains photographs, pre-production paintings, and conceptual designs that explore the genius behind the sci-fi classic that remains the benchmark for all cinema space epics.

The Making of 2001: A Space Odyssey Da Capo Press

Clinical practice related to sleep problems and sleep disorders has been expanding rapidly in the last few years, but scientific research is not keeping pace.

Sleep apnea, insomnia, and restless legs syndrome are three examples of very common disorders for which we have little biological information. This new book cuts across a variety of medical disciplines such as neurology, pulmonology, pediatrics, internal medicine, psychiatry, psychology, otolaryngology, and nursing, as well as other medical practices with an interest in the management of sleep pathology. This area of research is not limited to very young and old patients—sleep disorders reach across all ages and ethnicities. Sleep Disorders and Sleep Deprivation presents a structured analysis that explores the following: Improving

awareness among the general public and health care professionals. Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities. Validating and developing new and existing technologies for diagnosis and treatment. This book will be of interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems.

2001: A Space Odyssey
Abrams
The story of how

“2001: A Space Odyssey” came to be made is in many ways as epic as the events portrayed in the film itself—and until now, just as mysterious. In 1964, with “Dr. Strangelove” ready for release, Stanley Kubrick was uncertain about what his next project would be, and considered making a film dealing with several contemporary themes. It was only when he encountered Arthur C. Clarke that he decided to make a science fiction film. Yet it took more than four years for “2001: A Space Odyssey” to reach the screen—a productive and creative odyssey that involved experimentation, last-minute rethinks, strokes of genius, quarrels, ultimatums,

feats of will, and mental breakdowns. Drawing extensively from never before seen material, including production documents and private correspondences, "2001 between Kubrick and Clarke" gives for the first time a complete account of the two authors' creative collaboration; one which casts lights on their on-again, off-again relationship, as well as revealing new information about the genesis, production, and reception of the first and most important film about space, the origin of humankind and its destiny among the stars.

The Lost Worlds of 2001 Rutgers University Press
Amoral, cunning, ruthless, and instructive, this multi-million-copy New York Times bestseller is the definitive manual for anyone interested in gaining, observing, or defending against ultimate control - from the author of *The Laws of Human Nature*. In the book that People

magazine proclaimed “beguiling” and “fascinating,” Robert Greene and Joost Elffers have distilled three thousand years of the history of power into 48 essential laws by drawing from the philosophies of Machiavelli, Sun Tzu, and Carl Von Clausewitz and also from the lives of figures ranging from Henry Kissinger to P.T. Barnum. Some laws teach the need for prudence (“Law 1: Never Outshine the Master”), others teach the value of confidence (“Law 28: Enter Action with Boldness”), and many recommend absolute self-preservation (“Law 15: Crush Your Enemy Totally”). Every law, though, has one thing in common: an interest in total domination. In

a bold and arresting two-color package, *The 48 Laws of Power* is ideal whether your aim is conquest, self-defense, or simply to understand the rules of the game.

The Little Prince
Berkley

"If 2001 has stirred your emotions, your subconscious, your mythological yearnings, then it has succeeded."--Stanley Kubrick Stanley Kubrick's extraordinary movie 2001: A Space Odyssey was released in 1969. The critics initially disliked it, but the public loved it. And eventually, the film took its rightful place as one of the most innovative, brilliant, and pivotal works of modern cinema. The Making of 2001: A Space Odyssey consists of testimony

from Kubrick's collaborators and commentary from critics and historians. This is the most complete book on the film to date--from Stanley Kubrick's first meeting with screenwriter Arthur C. Clarke to Kubrick's exhaustive research to the actual shooting and release of the movie.

2001 Modern Library
The definitive story of the making of *2001: A Space Odyssey*, acclaimed today as one of the greatest films ever made, and of director Stanley Kubrick and writer Arthur C. Clarke—"a tremendous explication of a tremendous film....Breathtaking" (The Washington Post). Fifty years ago a strikingly original film had its premiere. Still acclaimed as one of

the most remarkable and important motion pictures ever made, *2001: A Space Odyssey* depicted the first contacts between humanity and extraterrestrial intelligence. The movie was the product of a singular collaboration between Stanley Kubrick and science fiction visionary Arthur C. Clarke. Fresh off the success of his cold war satire *Dr. Strangelove*, Kubrick wanted to make the first truly first-rate science fiction film. Drawing from Clarke's ideas and with one of the author's short stories as the initial inspiration, their bold vision benefited from pioneering special effects that still look extraordinary today, even in an age of computer-generated images. In *Space*

Odyssey, author, artist, and award-winning filmmaker Michael Benson “delivers expert inside stuff” (San Francisco Chronicle) from his extensive research of Kubrick’s and Clarke’s archives. He has had the cooperation of Kubrick’s widow, Christiane, and interviewed most of the key people still alive who worked on the film. Drawing also from other previously unpublished interviews, Space Odyssey provides a 360-degree view of the film from its genesis to its legacy, including many previously untold stories. And it features dozens of photos from the making of the film, most never previously published. “At last! The dense, intense, detailed, and

authoritative saga of the making of the greatest motion picture I’ve ever seen...Michael Benson has done the Cosmos a great service” (Academy Award-winning actor Tom Hanks).
Marketing the Moon
Del Rey
Stanley Kubrick, director of the acclaimed films Path of Glory, Spartacus, Lolita, Dr. Strangelove, 2001: Space Odyssey. A Clockwork Orange, The Shining, and Full Metal Jacket, is arguably one of the greatest American filmmakers. Yet, despite being hailed as “a giant” by Orson Welles, little is known about the reclusive director. Stanley Kubrick—the first full-length study of his life—is based on

assiduous archival research as well as new interviews with friends, family, and colleagues. Film scholar Vincent LoBRutto provides a comprehensive portrait of the director, from his high school days, in the Bronx and his stint as a photographer for *Look* magazine, through the creation of his wide-ranging movies, including the long-awaited *Eyes Wide Shut*. The author provides behind-the-scenes details about writing, filming, financing, and reception of the director's entire output, paying close attention to the technical innovations and to his often contentious relationships with actors. This fascinating biography exposes the

enigma that is Stanley Kubrick while placing him in context of film history.

A deluxe hardcover edition of the wondrous space adventure that is

the basis for Stanley Kubrick's Oscar-winning film—now celebrating its 50th anniversary Part of Penguin Galaxy, a collectible series of six sci-fi/fantasy classics, featuring a series introduction by Neil Gaiman Winner of the ALGA + Design Observer 50 Books | 50 Covers competition Written when landing on the moon was still a dream, 2001: A Space Odyssey is a science-fiction classic that has changed the way we look at the stars—and ourselves. On the moon, an enigma is uncovered. So great are the implications that, for the first time, men are sent deep into our solar system. But before they can reach their destination, things begin to go very wrong. From the

savannas of Africa at the dawn of mankind to the rings of Saturn at the turn of the 21st century, Arthur C. Clarke takes us on a journey unlike any other. Brilliant, compulsive, and prophetic, and the basis for the immensely influential Stanley Kubrick film, 2001: A Space Odyssey tackles the enduring theme of man's—and technology's—place in the universe and lives on as a landmark achievement in storytelling. Penguin Galaxy Six of our greatest masterworks of science fiction and fantasy, in dazzling collector-worthy hardcover editions, and featuring a series introduction by #1 New York Times bestselling author Neil Gaiman, Penguin

Galaxy represents a constellation of achievement in visionary fiction, lighting the way toward our knowledge of the universe, and of ourselves. From historical legends to mythic futures, monuments of world-building to mind-bending dystopias, these touchstones of human invention and storytelling ingenuity have transported millions of readers to distant realms, and will continue for generations to chart the frontiers of the imagination. The *Once and Future King* by T. H. White *Stranger in a Strange Land* by Robert A. Heinlein *Dune* by Frank Herbert *2001: A Space Odyssey* by Arthur C. Sentinel Best Book of 2018 “An amazing and engrossing history...Insightful, entertaining, and compulsively readable.” — George R. R. Martin Astounding is the landmark account of the extraordinary partnership between four controversial writers—John W. Campbell, Isaac Asimov, Robert A. Heinlein, and L. Ron Hubbard—who set off a revolution in science fiction and forever changed our world. This remarkable cultural narrative centers on the figure of John W. Campbell, Jr., whom Asimov called “the most powerful force in science fiction ever.” Campbell, who has never been the subject of a biography until now, was both a visionary author—he

wrote the story that was later filmed as The Thing—and the editor of the groundbreaking magazine best known as Astounding Science Fiction, in which he discovered countless legendary writers and published classic works ranging from the I, Robot series to Dune. Over a period of more than thirty years, from the rise of the pulps to the debut of Star Trek, he dominated the genre, and his three closest collaborators reached unimaginable heights. Asimov became the most prolific author in American history; Heinlein emerged as the leading science fiction writer of his generation with the novels Starship Troopers and Stranger in a Strange Land; and Hubbard achieved

lasting fame—and infamy—as the founder of the Church of Scientology. Drawing on unexplored archives, thousands of unpublished letters, and dozens of interviews, Alec Nevala-Lee offers a riveting portrait of this circle of authors, their work, and their tumultuous private lives. With unprecedented scope, drama, and detail, *Astounding* describes how fan culture was born in the depths of the Great Depression; follows these four friends and rivals through World War II and the dawn of the atomic era; and honors such exceptional women as Doña Campbell and Leslyn Heinlein, whose pivotal roles in the history of the genre have gone

largely unacknowledged. For the first time, it reveals the startling extent of Campbell’s influence on the ideas that evolved into Scientology, which prompted Asimov to observe: “I knew Campbell and I knew Hubbard, and no movement can have two Messiahs.” It looks unsparingly at the tragic final act that estranged the others from Campbell, bringing the golden age of science fiction to a close, and it illuminates how their complicated legacy continues to shape the imaginations of millions and our vision of the future itself. “Enthralling...A clarion call to enlarge American literary history.” — Washington Post “Engrossing, well-

researched... This sure-footed history addresses important issues, such as the lack of racial diversity and gender parity for much of the genre's history."

— Wall Street Journal

Stanley Kubrick's 2001:

A Space Odyssey

Bloomsbury Publishing

In the last four decades

Stanley Kubrick's 2001

has been dissected in books and theses from every conceivable angle. Until humanity actually encounters extraterrestrial intelligence, his movie will draw attention to this most tantalising subject. However, what is often overlooked in all of these critical studies is the almost flawless scientific façade constructed by Kubrick, Clarke, Ordway, Lange and the hundreds of engineers and scientists who contributed to the production. Author and engineer Adam Johnson has spent years accumulating information, believed to have been long since destroyed, to create a detailed and unprecedented analysis of the technology envisioned in Kubrick's

masterpiece. From British designers and model-makers to Soviet astronomers, from Canadian special effects wizards to German artists, from American spacecraft engineers and artificial intelligence scholars to French stylists, this is the Lost Science of 2001.

Moonwatcher's Memoir
Intellect (UK)

Filled with material that came to light after the publication of the first edition in 1994, this updated edition includes interviews, new material from effects supervisor Doug Turnbull and additional illustrations.

Stanley Kubrick Simon & Schuster

Decades of research have demonstrated that the parent-child dyad and the environment of the

family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves.

For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies

parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents

and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Astounding White Lion Publishing

This magnificent tome is a previously unseen look behind-the-scenes at the making of this most legendary of science fiction classics.

Art director Harry Lange's strikingly realistic designs for Stanley Kubrick's 2001: A Space Odyssey created an extraordinary vision of the future and they remain the epitome of filmmaking. For the first time ever, Lange's archive is explored in this stunning volume, featuring original concept sketches,

designs, correspondence and on set photographs.

The Architecture of Cinematic Spaces

Apogee Books

REMARKABLE

BIOGRAPHY OF AN

ICON There's little

debate that Robert De

Niro is one of the

greatest, if not the

greatest, screen actors

of his generation,

perhaps of all time. His

work, particularly in

the first 20 years of his

career, is unparalleled.

Mean Streets, the

Godfather Part II, Taxi

Driver, the Deer

Hunter, and Raging

Bull all dazzled

moviegoers and critics

alike, displaying a

talent the likes of

which had rarely--if

ever--been seen. De

Niro become known for

his deep involvement

in his characters,

assuming that role

completely into his own life, resulting in extraordinary, chameleonic performances. Yet little is known about the off-screen De Niro--he is an intensely private man, whose rare public appearances are often marked by inarticulateness and palpable awkwardness. It can be almost painful to watch at times, in powerful contrast to his confident movie personae. In this elegant and compelling biography, bestselling writer Shawn Levy writes of these many De Niros--the characters and the man--seeking to understand the evolution of an actor who once dove deeply into his roles as if to hide his inner nature, and who now seemingly avoids

acting challenges, taking roles which make few apparent demands on his overwhelming talent. Following De Niro's roots as the child of artists (his father, the abstract painter Robert De Niro Sr., was widely celebrated) who encouraged him from an early age to be independent of vision and spirit, to his intense schooling as an actor, the rise of his career, his marriages, his life as a father, restaurateur, and businessman, and, of course, his current movie career, Levy has written a biography that reads like a novel about a character whose inner turmoil takes him to heights of artistry. His many friendships with the likes of Martin Scorsese, Meryl Streep,

Harvey Keitel, Shelley Winters, Francis Ford Coppola, among many others, are woven into this extraordinary portrait of DeNiro the man and the artist, also adding a depth of understanding not before seen. Levy has had unprecedented access to De Niro's personal research and production materials, creating a new impression of the effort that went into the actor's legendary performances. The insights gained from DeNiro's intense working habits shed new perspective on DeNiro's thinking and portrayals and are wonderful to read. Levy also spoke to De Niro's collaborators and friends to depict De Niro's transition from an ambitious young man to a

transfixing and enigmatic artist and cultural figure. Shawn Levy has written a truly engaging, insightful, and entertaining portrait of one of the most wonderful film artists of our time, a book that is worthy of such a great talent.

Stanley Kubrick Del Rey

Almost all students have seen 2001, but virtually none understand its inheritance, its complexities, and certainly not its ironies. The essays in this collection, commissioned from a wide variety of scholars, examine in detail various possible readings of the film and its historical context. They also examine the film as a genre piece--as the summa of science

fiction that simultaneously looks back on the science fiction conventions of the past (Kubrick began thinking of making a science fiction film during the genre's heyday in the fifties), rethinks the convention in light of the time of the film's creation, and in turn changes the look and meaning of the genre that it revived--which now remains as prominent as it was almost four decades ago. Constructed out of its director's particular intellectual curiosity, his visual style, and his particular notions of the place of human agency in the world and, in this case, the universe, 2001 is, like all of his films, more than it appears, and it keeps revealing more the more it is seen.

Though their backgrounds and disciplines differ, the authors of this essay collection are united by a talent for vigorous yet incisive writing that cleaves closely to the text--to the film itself, with its contextual and intrinsic complexities--granting readers privileged access to Kubrick's formidable, intricate classic work of science fiction.

Code of Ethics for Nurses with Interpretive Statements Crown Archetype

The Firstborn--the mysterious race of aliens who first became known to science fiction fans as the builders of the iconic black monolith in 2001: A Space Odyssey--have inhabited legendary master of science

fiction Sir Arthur C. Clarke's writing for decades. With *Time's Eye* and *Sunstorm*, the first two books in their acclaimed *Time Odyssey* series, Clarke and his brilliant co-author Stephen Baxter imagined a near-future in which the Firstborn seek to stop the advance of human civilization by employing a technology indistinguishable from magic. Their first act was the *Discontinuity*, in which Earth was carved into sections from different eras of history, restitched into a patchwork world, and renamed *Mir*. *Mir*'s inhabitants included such notables as Alexander the Great, Genghis Khan, and United Nations peacekeeper Bisesa Dutt. For reasons

unknown to her, Bisesa entered into communication with an alien artifact of inscrutable purpose and godlike power—a power that eventually returned her to Earth. There, she played an instrumental role in humanity's race against time to stop a doomsday event: a massive solar storm triggered by the alien Firstborn designed to eradicate all life from the planet. That fate was averted at an inconceivable price. Now, twenty-seven years later, the Firstborn are back. This time, they are pulling no punches: They have sent a “quantum bomb.” Speeding toward Earth, it is a device that human scientists can barely comprehend, that cannot be stopped or

destroyed—and one that will obliterate Earth. Bisesa's desperate quest for answers sends her first to Mars and then to Mir, which is itself threatened with extinction. The end seems inevitable. But

as shocking new insights emerge into the nature of the Firstborn and their chilling plans for mankind, an unexpected ally appears from light-years away.
