Introduction to Business Oxford University Press

The winners of the Nobel Prize show how economics, when done right, can help us solve the thorniest social and political problems of our day. Figuring out how to deal with today's critical economic problems is perhaps the great challenge of our time. Much greater than space travel or perhaps even the next revolutionary medical breakthrough, what is at stake is the whole idea of the good life as we have known it. Immigration and inequality, globalization and technological disruption, slowing growth and accelerating climate change--these are sources of great anxiety across the world, from New Delhi and Dakar to Paris and Washington, DC. The resources to address these challenges are there--what we lack are ideas that will help us jump the wall of disagreement and distrust that divides us. If we succeed, history will remember our era with gratitude; if we fail, the potential losses are incalculable. In this revolutionary book, renowned MIT economists Abhijit V. Banerjee and Esther Duflo take on this challenge, building on cutting-edge research in economics explained with lucidity and grace. Original, provocative, and urgent, *Good Economics for Hard Times* makes a persuasive case for an intelligent interventionism and a society built on compassion and respect. It is an extraordinary achievement, one that shines a light to help us appreciate and understand our precariously balanced world.

Stampede Theory Simon and Schuster

Cabdrivers and their yellow taxis are as much a part of the cityscape as the high-rise buildings and the subway. We hail them

without thought after a wearying day at the office or an exuberant night on the town. And, undoubtedly, taxi drivers have stories to tell—of farcical local politics, of colorful passengers, of changing neighborhoods and clandestine shortcuts. No one knows a city's streets—and thus its heart—better than its cabdrivers. And from behind the wheel of his taxi, Dmitry Samarov has seen more of Chicago than most Chicagoans will hope to experience in a lifetime. An artist and painter trained at the School of the Art Institute of Chicago, Samarov began driving a cab in 1993 to make ends meet, and he's been working as a taxi driver ever since. In *Hack: Stories from a Chicago Cab*, he recounts tales that will delight, surprise, and sometimes shock the most seasoned urbanite. We follow Samarov through the rhythms of a typical week, as he waits hours at the garage to pick up a shift, ferries comically drunken passengers between bars, delivers prostitutes to their johns, and inadvertently observes drug deals. There are long waits with other cabbies at O'Hare, vivid portraits of street corners and their regular denizens, amorous Cubs fans celebrating after a game at Wrigley Field, and customers who are pleasantly surprised that Samarov is white—and tell him so. Throughout, Samarov's own drawings—of his fares, of the taxi garage, and of a variety of Chicago street scenes—accompany his stories. In the grand tradition of Nelson Algren, Saul Bellow, Mike Royko, and Studs Terkel, Dmitry Samarov has rendered an entertaining, poignant, and unforgettable vision of Chicago and its people.

Clair Bee (1896-1983) was a hugely successful basketball coach at Rider College and Long Island University with a 412 and 87 record before his career was derailed in 1951 by a point-shaving scandal. In the trial that sent his star player, Sherman White, to prison, the judge excoriated Bee for creating a morally lax culture that contributed to his players' involvement with gambling. To a certain extent, Bee agreed with the judge's scolding, concluding that coaches, himself included, had become so driven to succeed on the court that they had lost sight of the educational role sports should play. His coaching career effectively over, Bee launched an effort to reform the ills he saw in college sports, and he did so in the pages of the Chip Hilton novels for young readers. He began the series in 1948, but it was the post-scandal books that he used as teaching tools. The books mirrored some of the events of the gambling scandal and were Bee's attempt to reform the problems plaguing college sports. He used his fiction to posit a better sports world that he hoped his young readers would construct and inhabit. The Chip Hilton books were extremely popular and have become a classic series, with over two million copies sold to date. *Hoop Crazy* is the fascinating story of Clair Bee and his star character Chip Hilton and the ways in which their lives, real and fictional, were intertwined.

New York Times and Wall Street Journal bestseller A step-by-step plan clinically proven to break the cycle of worry and fear that drives anxiety and addictive habits We are living through one of the most anxious periods any of us can remember. Whether facing issues as public as a pandemic or as personal as having kids at home and fighting the urge to reach for the wine bottle every night, we are feeling overwhelmed and out of control. But in this timely book, Judson Brewer explains how to uproot anxiety at its source using brain-based techniques and small hacks accessible to anyone. We think of anxiety as everything from mild unease to full-blown panic. But it's also what drives the addictive behaviors and bad habits we use to cope (e.g. stress eating, procrastination, doom scrolling and social media). Plus, anxiety lives in a part of the brain that resists rational thought. So we get stuck in anxiety habit loops that we can't think our way out of or use willpower to overcome. Dr. Brewer teaches us to map our brains to discover our triggers, defuse them with the simple but powerful practice of curiosity, and to train our brains using mindfulness and other practices that his lab has proven can work. Distilling more than 20 years of research and hands-on work with thousands of patients, including Olympic athletes and coaches, and leaders in government and business, Dr. Brewer has created a clear, solution-oriented program that anyone can use to feel better - no matter how anxious they feel.

Are all film stars linked to Kevin Bacon? Why do the stock markets rise and fall sharply on the strength of a vague rumour? How does gossip spread so quickly? Are we all related through six degrees of separation? There is a growing awareness of the complex networks that pervade modern society. We see them in the rapid growth of the internet, the ease of global communication, the swift spread of news and information, and in the way epidemics and financial crises develop with startling speed and intensity. This introductory book on the new science of networks takes an interdisciplinary approach, using economics, sociology, computing, information science and applied mathematics to

address fundamental questions about the links that connect us, and the ways that our decisions can have consequences for others.

Crime analysis has become an increasingly important part of policing and crime prevention, and thousands of specialist crime analysts are now employed by police forces worldwide. This is the first book to set out the principles and practice of crime analysis, and is designed to be used both by crime analysts themselves, by those responsible for the training of crime analysts and teaching its principles, and those teaching this subject as part of broader policing and criminal justice courses. The particular focus of this book is on the adoption of a problem solving approach, showing how crime analysis can be used and developed to support a problem oriented policing approach - based on the idea that the police should concentrate on identifying patterns of crime and anticipating crimes rather than just reacting to crimes once they have been committed. In his foreword to this book, Nick Ross, presenter of BBC Crime Watch, argues passionately that crime analysts are 'the new face of policing', and have a crucial part to play in the increasingly sophisticated police response to crime and its approach to crime prevention - 'You are the brains, the expert, the specialist, the boffin.'

They posed them to the businesspeople, publishers, and politicians who championed tests. They also posed them to the school administrators, teachers, and union leaders who criticized them. This book examines the questions the parents posed, the answers they elicited, and the changes they prodded.

From the USA TODAY bestselling author of *Sweet Thing* and *Nowhere But Here* comes a love story about a Craigslist "missed connection" post that gives two people a second chance at love fifteen years after they were separated in New York City. To the Green-eyed Lovebird: We met fifteen years ago, almost to the day, when I moved my stuff into the NYU dorm room next to yours at Senior House. You called us fast friends. I like to think it was more. We lived on nothing but the excitement of finding ourselves through music (you were obsessed with Jeff Buckley), photography (I couldn't stop taking pictures of you), hanging out in Washington Square Park, and all the weird things we did to make money. I learned more about myself that year than any other. Yet, somehow, it all fell apart. We lost touch the summer after graduation when I went to South America to work for National Geographic. When I came back, you were gone. A part of me still wonders if I pushed you too hard after the wedding... I didn't see you again until a month ago. It was a Wednesday. You were rocking back on your heels, balancing on that thick yellow line that runs along the subway platform, waiting for the F train. I didn't know it was you until it was too late, and then you were gone. Again. You said my name; I saw it on your lips. I tried to will the train to stop, just so I could say hello. After seeing you, all of the youthful feelings and memories came flooding back to me, and now I've spent the better part of a month wondering what your life is like. I might be totally out of my mind, but would you like to get a drink with me and catch up on the last decade and a half? M

For the first time, the Cambridge Analytica whistleblower tells the

inside story of the data mining and psychological manipulation behind the election of Donald Trump and the Brexit referendum, connecting Facebook, WikiLeaks, Russian intelligence, and international hackers. "Mindf*ck demonstrates how digital influence operations, when they converged with the nasty business of politics, managed to hollow out democracies."—The Washington Post *Mindf*ck* goes deep inside Cambridge Analytica's "American operations," which were driven by Steve Bannon's vision to remake America and fueled by mysterious billionaire Robert Mercer's money, as it weaponized and wielded the massive store of data it had harvested on individuals—in excess of 87 million—to disunite the United States and set Americans against each other. Bannon had long sensed that deep within America's soul lurked an explosive tension. Cambridge Analytica had the data to prove it, and in 2016 Bannon had a presidential campaign to use as his proving ground. Christopher Wylie might have seemed an unlikely figure to be at the center of such an operation. Canadian and liberal in his politics, he was only twenty-four when he got a job with a London firm that worked with the U.K. Ministry of Defense and was charged putatively with helping to build a team of data scientists to create new tools to identify and combat radical extremism online. In short order, those same military tools were turned to political purposes, and Cambridge Analytica was born. Wylie's decision to become a whistleblower prompted the largest data-crime investigation in history. His story is both exposé and dire warning about a sudden problem born of very new and powerful capabilities. It has not only laid bare the profound vulnerabilities—and profound carelessness—in the enormous companies that drive the attention economy, it has also exposed the profound vulnerabilities of democracy itself. What happened in 2016 was just a trial run. Ruthless actors are coming for your data, and they want to control what you think.
