The Divine Bureaucracy and Disenchantment of Social Life Springer

This book traces the expansion of Islamisation within a modern and plural state such as Malaysia. It elaborates on how elements of theology, sacred space, resources, and their interactivity with secular instruments such as legislative, electoral, and new social technological platforms are all instrumentally employed to consolidate a divine bureaucracy. The book makes the point that religious social movements and political parties are only few of the important agents of Islamisation in society. The other is the modern and secular state structure itself. Weber's legal rational bureaucracy or Hegel's ethical bureaucracy predominantly characterises a modern feature of governmentality. In this instance an Islamic bureaucracy is advantageously situated not only within an ambit of modernity and therefore legality, but divinity and therefore sacrality as well. This positioning gives religious state agents more salience than any other form of bureaucracy leading to their unquestioned authority in the current contexts of societies with Muslim majority rule. One of the requisites of this condition is the homogenisation of Islam followed by ring-fencing of its constituents. The latter can involve contestations with women, other genders, 'secular' Muslims, non-Muslims as well as dissenting Muslims with their differing truthful 'Islams'.

"Physicists have grappled with quantum theory for over a century. They have learned to wring precise answers from the theory's governing equations, and no experiment to date has found compelling evidence to contradict it. Even so, the conceptual apparatus remains stubbornly, famously bizarre. Physicists have tackled these conceptual uncertainties while navigating still larger

ones: the rise of fascism, cataclysmic world wars and a new nuclear age, an unsteady Cold War stand-off and its unexpected end. Quantum Legacies introduces readers to physics' still-unfolding quest by treating iconic moments of discovery and debate among well-known figures like Albert Einstein, Erwin Schrödinger, and Stephen Hawking, and many others whose contributions have indelibly shaped our understanding of nature"-

Progressively Worse Hodder Education

The 2012 GCSE English results prompted significant controversy, which ultimately resulted in an application for judicial review. This report sets out the background to these events and identifies lessons to be learned. The problems with GCSE English can be traced back to the 2007-09 development phase of the qualification- in particular the turbulence which resulted from the shift away from a mostly linear to a modular system, combined with a high proportion of controlled assessment and generous marking tolerances. Exam board experts raised concerns at the time, but these were not acted upon by the regulator (the then-interim Ofqual). Further difficulties arose because of pressures from the school accountability system. The problems experienced with GCSE English in 2012 highlighted serious weaknesses in the moderation of speaking and listening, with consequences for grade awarding. The current status of Ofqual, as an independent regulator accountable to Parliament, is the right one. However, the Coalition Government is bringing in wholesale changes to GCSEs and A levels, to a tight timetable and at the same time. Ofqual must have systems in place. The Committee is also concerned that there is a rush towards separate exam systems for England, Wales and Northern Ireland, without careful reflection on what might be lost, or consensus that this is the right thing to do.

Pakistan's Security Paradox Hodder Education

This JSOU publication affords the reader an opportunity to look into Pakistan's national security policy and strategy through the lens of a Pakistani loupe. Author Haider Mullick, born in Islamabad and educated in the United States (U.S.), provides his interpretation of Pakistani strategic behavior in terms of the geostrategic interests of that nation. Mr. Mullick's discussion of the strategic setting in Southwest Asia is particularly timely as the U.S. is diverting strategic resources from the Iraqi theater of war

to the effort in Afghanistan. Concurrently, the new administration of President Obama is refocusing the national security strategy away from notions of a global war on terrorism to a security policy of a "broader engagement" with the countries of the world and particularly the Muslim world. As one part of this strategic vision, a particular effort will be made to dismantle or destroy Al Qaeda and its associates. In discussing what Mr. Mullick calls "strategic spread," he relates Pakistan's national interests for protecting the nation against internal (separatism) and external (nuclear India) threats. Strategic spread is a mix of policy objectives that guide offensive, defensive, preemptive, and irregular warfare. These policy approaches include nuclear/military parity with India, quelling internal dissent, strengthening religious cohesiveness, and making foreign aid plentiful and certain. The geographic dimension of this is "strategic depth," seen as Pakistani influence in Afghanistan to counter Indian and Iranian proxies there, to hedge against a future occupying force, and to provide a base for irregular warfare against India in Kashmir. The problem for U.S. military planners is that there is no strong correlation among Pakistan's regional interests and those of the U.S. or other countries. Mr. Mullick's insights highlight the shortcoming of attempting to fight a regional war one country at a time with different approaches in interests and strategies. The ambiguity of Pakistan's security strategy generates enormous strategic angst for the would-be peacemaker: how can one achieve a regional solution when Pakistan foments insurgency in southern Afghanistan while it counters insurgency in northern Pakistan with and against people of the same mores-the Pashtuns. What makes it more complicated is that now the insurgency in Pakistan has spread beyond predominantly Pashtun areas to the country's central province of Punjab and the southern provinces of xii Baluchistan and Sindh. The situation suggests what Mr. Mullick terms, a COIN-FOIN paradox

Though overall cancer incidence and mortality have continued to decline in recent years, cancer continues to devastate the lives of far too many Americans. In 2009 alone, 1.5 million American men, women, and children were diagnosed with cancer, and 562,000 died from the disease. There is a growing body of evidence linking environmental exposures to cancer. The Pres. Cancer Panel dedicated its 2008;2009 activities to examining the impact of environmental factors on cancer risk. The Panel considered industrial, occupational, and agricultural exposures as well as exposures related to medical practice, military activities, modern lifestyles, and natural sources. This report presents the Panel's recommend. to mitigate or eliminate these barriers. Illus.

"The lack of academic integrity combined with the prevalence of fraud and other forms of unethical behavior are problems that higher education faces in both developing and developed countries, at mass and elite universities, and at public and private institutions. While academic misconduct is not new, massification, internationalization, privatization, digitalization, and commercialization have placed ethical challenges higher on the agenda for many universities. Corruption in academia is particularly unfortunate, not only because the high social regard that universities have traditionally enjoyed, but also because

students-young people in critical formative years-spend a significant amount of time in universities. How they experience corruption while enrolled might influence their later personal and professional behavior, the future of their country, and much more. Further, the corruption of the research enterprise is especially serious for the future of science. The contributors to *Corruption in Higher Education: Global Challenges and Responses* bring a range of perspectives to this critical topic"--

The aim of this book is to provide detailed coverage of the topics in the new OCR AS and A Level Computer Science specifications H046 / H446. The book is divided into twelve sections and within each section, each chapter covers material that can comfortably be taught in one or two lessons. Material that is applicable only to the second year of the full A Level is clearly marked. Sometimes this may include an entire chapter and at other times, just a small part of a chapter. Each chapter contains exercises and questions, some new and some from past examination questions. Answers to

all these are available to teachers only in a free Teacher's Pack which can be ordered from our website www.pgonline.co.uk. This book has been written to cover the topics which will be examined in the written papers at both AS and A Level. Sections 10, 11 and 12 relate principally to problem solving skills, with programming techniques covered in sufficient depth to allow students to answer questions in Component 02. Pseudocode, rather than any specific programming language, is used in the algorithms given in the text. Sample Python programs which implement many of the algorithms are included in a folder with the Teacher's Pack.
