There is NO SUCH THING as a mindless doodle. What did Einstein, JFK, Edison, Marie Curie, and Henry Ford have in common? They were all inveterate doodlers. These powerhouse minds knew instinctively that doodling is deep thinking in disguise—a simple, accessible, and dynamite tool for innovating and solving even the stickiest problems. Sunni Brown's

mission is to bring the power of the Doodle to the rest of us. She leads the Revolution defying all those parents, teachers, and bosses who say Stop doodling! Get serious! Grow up! She overturns misinformation about doodling, demystifies visual thinking, and shows us the power of applying our innate visual literacy. She'll teach you how to doodle any object, concept, or system imaginable, shift habitual thinking patterns, and transform boring text into displays that can engage

any audience. Sunni Brown was named one of the "100 Most Creative People in Business" and one of the "10 Most Creative People on Twitter" by Fast Company. She is founder of a creative consultancy, an international speaker, the co-author of Gamestorming, and the leader of a global campaign for visual literacy called The Doodle Revolution. Her TED Talk on doodling has drawn more than a million views on TED.com. Her work on visual literacy and gaming

has been featured in over 35 nationally-syndicated news programs and reported on in The Wall Street Journal, CNN.com, the BBC, Fast Company, Inc. Magazine, etc. She lives in Keep Austin Weird, Texas.

Art Index Springer Science & Business Media Clinical practice related to sleep problems and sleep disorders has been expanding rapidly in the last few years, but scientific research is not keeping pace. Sleep apnea, insomnia, and restless legs syndrome

are three examples of very common disorders for which we have little biological information. This new book cuts across a variety of medical disciplines such as neurology, pulmonology, pediatrics, internal medicine, psychiatry, psychology, otolaryngology, and nursing, as well as other medical practices with an interest in the management of sleep pathology. This area of research is not limited to very young and old patientsâ€"sleep

disorders reach across all ages and ethnicities. Sleep Disorders and Sleep Deprivation presents a structured analysis that explores the following: Improving awareness among the general public and health care professionals. Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities. Validating and developing new and existing technologies for diagnosis and treatment. This book will be of

interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems. [Twelfth Night; Or, What You Will](#) HarperCollins UK Early childhood mathematics is vitally important for young children's present and future educational success. Research demonstrates that

virtually all young children have the capability to learn and become competent in mathematics.

Furthermore, young children enjoy their early informal experiences with mathematics.

Unfortunately, many children's potential in mathematics is not fully realized, especially those children who are economically disadvantaged. This is due, in part, to a lack of opportunities to learn mathematics in early childhood settings or

through everyday experiences in the home and in their communities. Improvements in early childhood mathematics education can provide young children with the foundation for school success. Relying on a comprehensive review of the research, *Mathematics Learning in Early Childhood* lays out the critical areas that should be the focus of young children's early mathematics education, explores the extent to which they are currently being incorporated in

early childhood settings, and identifies the changes needed to improve the quality of mathematics experiences for young children. This book serves as a call to action to improve the state of early childhood mathematics. It will be especially useful for policy makers and practitioners—those who work directly with children and their families in shaping the policies that affect the education of young children.

Chemistry for Sustainable

Development is a collection of selected papers by the participants of the International Conference on Pure and Applied Chemistry (ICPAC 2010) on the theme of “Chemistry for Sustainable Development” held in Mauritius in July 2010. In light of the significant progresses and challenges in the development and implementation of green and sustainable chemistry, this volume reviews the recent results generated by a more

efficient use of resources to minimize carbon footprints, to foster the eradication or minimisation of solvent use in chemistry, and to deliver processes which lead to increased harmony between chemistry and the environment. Chemistry for Sustainable Development is written for graduates, postgraduates, researchers in industry and academia who have an interest in the fields ranging from fundamental to applied chemistry.

Children and young people in care rarely match the academic achievements of their peers and policy and procedures to address this inequality have not yet remedied the problem. Drawing on ideas from social pedagogy, the authors present a new approach -

learning placements and caring schools. They show that education and care must be considered integral to both out of home placements and schools. Packed with practice examples, it includes chapters on early childhood education and care, as well as alternatives to school and higher education, covering everything from birth up to the age of 25. It highlights the potential benefits of a range of learning opportunities, from drama and outdoor activities, to bedtime

stories and mentoring as well as providing support for teachers in their role as carer. Chapters include key points, case studies, practice points and useful resources. This is a unique evidence-informed practical guide for students and professionals in the fields of social work, social care, psychology and education. *Key Maths GCSE* Springer Science & Business Media This book develops the reading and writing skills that students will be assessed on in the exams.

Using a thematic approach that focuses on the AOs, with SPAG delivered in context, this book supports students of all abilities. Peer and self-assessment activities, end-of-chapter assessments and sample exam papers allow progress to be monitored. This authoritative volume provides a comprehensive road map of the important and rapidly growing field of emotion regulation. Each of the 30 chapters in this handbook reviews the current state of knowledge on the topic at hand, describes salient research methods, and identifies promising directions for future investigation. The contributors—who are the foremost experts in the field—address vital

This book explores the impact of socio-emotional intelligence on wellbeing in higher education.

Stemming from years of investigation and educational expertise with trainee teachers and academics, the book identifies ways in which socio-emotional intelligence can be developed in university environments. The author begins by analysing the concept of socio-emotional intelligence and its development, before confronting distinctive areas for improvement within the context of teaching and learning in higher education. The book explores the

importance of understanding and labelling emotions, and how opportunities for self-reflection arise through an environment that meets practical needs. The author contends that support from other scholars is vital to the development of socio-emotional intelligence. The book concludes with a set of practical suggestions for promoting personal development. It will be a valuable resource for anyone working in higher education who is

interested in improving their own wellbeing and that of those around them.

 Interest in children's drawings is contemporary with the birth of modern psychology but as yet

there is no psychological theory that successfully accounts for the nature of children's drawing. The two main theories, visual realism and intellectual realism, fall short. The work of Georges-Henri Luquet is important because it goes beyond both theories. Luquet's work, though important and of interest to developmental psychologists, remains untranslated to date and so is often inaccurately cited. This translation of *Le Dessin Enfantin* makes Luquet's ideas available

to a wider readership for the first time.

Managing human emotions plays a critical role in everyday functioning. After years of lively debate on the significance and validity of its construct, emotional intelligence (EI) has generated a robust body of theories, research studies, and measures. *Assessing Emotional Intelligence: Theory, Research, and Applications* strengthens this theoretical and

evidence base by addressing the most recent advances and emerging possibilities in EI assessment, research, and applications. This volume demonstrates the study and application of EI across disciplines, ranging from psychometrics and neurobiology to education and industry. *Assessing Emotional Intelligence* carefully critiques the key measurement issues in EI, and leading experts present EI as eminently practical and thoroughly contemporary as they offer the latest findings

on: EI instruments, including the EQ-I, MSCEIT, TEIQue, Genos Emotional Intelligence Inventory, and the Assessing Emotions Scale. The role of EI across clinical disorders. Training professionals and staff to apply EI in the workplace. Relationships between EI and educational outcomes. Uses of EI in sports psychology. The cross-cultural relevance of EI. As the contributors to this volume in the Springer Series on Human Exceptionality make clear, these insights and

methods hold rich potential for professionals in such fields as social and personality psychology, industrial and organizational psychology, psychiatry, business, and education. *Edexcel Higher* Hodder Murray Romantic folly and false identities abound as an unusual love triangle takes the stage in this play about Orsino, the infatuated Duke of Illyria; Olivia, the countess he pursues; and Viola, the woman disguised as a man who comes between

them. This revised Signet Classics edition includes unique features such as: - An overview of Shakespeare's life, world, and theater- A special introduction to the play by the editor, Herschel Baker- Selections from Barnabe Rich, Of Apolonius and Silla, the source from which Shakespeare derived Twelfth Night- Dramatic criticism from Samuel Johnson, William Hazlitt, Charles Lamb, and others- A comprehensive stage and screen history of notable actors, directors,

and productions- Text, notes, and commentaries printed in the clearest, most readable text- And more...
Developing Socio-Emotional Intelligence in Higher Education Scholars National Academies Press Each volume in the 7-volume series *The World of Science Education* reviews research in a key region of the world. These regions include North America, South and Latin America, Asia, Australia and New Zealand, Europe, Arab States, and Sub-Saharan Africa. The focus

of this Handbook is on science education in Europe. In producing this volume the editors have invited a range of authors to describe their research in the context of developments in the continent and further afield. In reading this book you are invited to consider the historical, social and political contexts that have driven developments in science education research over the years. A unique feature of science education in Europe is the impact of the European

Union on research and development over many years. A growing number of multi-national projects

have contributed to the establishment of a community of researchers increasingly accepting of methodological diversity.

That is not to say that Europe is moving towards homogeneity, as this volume clearly shows.
