Quizizz Given: Isosceles right triangle XYZ (45° - 45° - 90° triangle) Prove: In a 45° - 45° - 90° triangle, the hypotenuse is times the length of each leg. Because triangle XYZ is a right triangle, the side lengths must satisfy the Pythagorean theorem, $a^2 + b^2 = c^2$, which in this isosceles triangle becomes $a^2 + a^2 = c^2$. By combining like terms, $2a^2 = c^2$. Special Right Triangles Assignment and Quiz Flashcards ... Learn special right triangles geometry with free interactive flashcards.
