Lewiston, a mill town of about thirty-six thousand people, is the second-largest city in Maine. It is also home to some three thousand Somali refugees. After initially being resettled in larger cities elsewhere, Somalis began to arrive in Lewiston by the dozens, then the hundreds, after hearing stories of Maine's attractions through family networks. Today, cross-cultural interactions are reshaping the identities of Somalis—and adding new chapters to the immigrant history of Maine. Somalis in Maine offers a kaleidoscope of voices that situate the story of Somalis' migration to Lewiston within a larger cultural narrative.

Combining academic analysis with refugees' personal stories, this anthology includes reflections on leaving Somalia, the experiences of Somali youth in U.S. schools, the reasons for Somali secondary migration to Lewiston, the employment of many Lewiston Somalis at Maine icon L. L. Bean, and community dialogues with white Mainers. Somalis in Maine seeks to counter

stereotypes of refugees as being socially dependent and unable to assimilate, to convey the richness and diversity of Somali culture, and to contribute to a greater understanding of the intertwined futures of Somalis and Americans.

Your Money, Your Goals

North Atlantic Books

The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to

the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. Making Eye Health a Population Health Imperative: Vision for Tomorrow proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive

areas for action at federal, state, and local levels.

D C, 0-3 Bureau of National Affairs (BNA)

In 2000, HUD, in recognition that any solution to homelessness must emphasize housing, targeted its McKinney-Vento Act homeless competitive programs towards housing activities. This policy decision presumed that programs such as Medicaid, TANF and General Assistance could pick up the slack produced by the change. This study examines how 7 communities sought to improve homeless people's access to mainstream services following this shift away from funding services through the Supportive Housing Program. Provides communities with models and strategies that they can use. Highlights the limits of what even the most resourceful of communities can do to enhance service and benefit access by homeless families and individuals.

This single-volume desktop resource analyzes the principal statutory provisions affecting probate practice in Maine & examines the leading cases arising under each section of the Probate Code. The book begins with a general discussion of the jurisdiction & venue of the Probate Court as specified in Title 4. Part One discusses child custody & support proceedings, adoptions, & change of name procedures within the Probate Court's jurisdiction. Part Two offers a section-by-section commentary on the Maine Probate Code & includes

the full text of each provision. Part Three is a rule-by-rule commentary on the Rules of Probate Procedure pointing out the similarities & differences between probate & civil proceedings.

[The Uniformed Services Employment and Reemployment Rights Act](#) American Psychiatric Pub

The United States has the highest per capita spending on health care of any industrialized nation but continually lags behind other nations in health care outcomes including life expectancy and infant mortality. National health expenditures are projected to exceed \$2.5 trillion in 2009. Given healthcare's direct impact on the economy, there is a critical need to control health care spending. According to *The Health Imperative: Lowering Costs and Improving Outcomes*, the costs of health care have strained the federal budget, and negatively affected state governments, the private sector and individuals. Healthcare expenditures have restricted the ability of state and local governments to fund other priorities and have contributed to slowing growth in wages and jobs

in the private sector. Moreover, the number of uninsured has risen from 45.7 million in 2007 to 46.3 million in 2008. The Health Imperative: Lowering Costs and Improving Outcomes identifies a number of factors driving expenditure growth including scientific uncertainty, perverse economic and practice incentives, system fragmentation, lack of patient involvement, and under-investment in population health. Experts discussed key levers for catalyzing transformation of the delivery system. A few included streamlined health insurance regulation, administrative simplification and clarification and quality and consistency in treatment. The book is an excellent guide for policymakers at all levels of government, as well as private sector healthcare workers.

SSI Recipients by State and County MICHIE

The purpose of this monograph is to describe the principles of drug treatment in old age and the best therapeutic practice for the elderly. The present text is based on those drugs likely to be available in most countries, and thus of

universal relevance. The WHO Model List of Essential Drugs have been given some preference over others.

Review Transportation Research Board

In DSM-5, published in 2013, the classification of autism spectrum disorder (ASD) was created, subsuming several diagnoses and representing a significant evolution from its first appearance in the DSM-III three decades earlier.

Autism Spectrum Disorders reflects this evolution, offering clinicians and families a succinct, definitive, and up-to-date guide to current research in the field and its impact on assessment and treatment. The book begins with the epidemiology of ASDs, which have increased in prevalence, and explores

genetic heritability and environmental risk factors. It then explains the roles of the psychiatrist, neurologist and pediatrician in assessing the patient, examines assessment tools and processes, and describes the latest advances in a variety of treatments and interventions. The text's focus is on educating and empowering families and health care providers to determine whether appropriate genetic testing and counseling have been undertaken, whether the individual has had the relevant assessment, and whether skilled behavioral treatment and additional medical assessment or treatment are required. Specifically, the text: Reviews existing prevalence estimates for ASDs since 2000 and discusses methodological factors impacting the estimation of prevalence and the interpretation of changes in prevalence estimates over time. Evaluates genomic and epigenomic research over the last decade in the context of translating findings to practice, in terms of testing (e.g., copy number variants and whole-exome sequencing) and counseling. Examines

the role of environmental toxicity in immune dysregulation, which has now been noted among individuals with ASD and their family members by numerous studies. Reviews medical and cognitive assessments that may be needed. Reviews targeted treatments that have the potential to reverse neurobiological abnormalities in ASD. Reviews behavioral treatments that are effective in promoting development and improving behavior. Describes the Developmental, Individual Difference, Relationship-based (DIR) model, a comprehensive developmental theory with relevance across the lifespan, which targets the core deficits of ASD identified in DSM-5. Provides an overview of school-based interventions for students with autism, exploring the rationale for conducting school-based research and examining existing teacher-, paraprofessional-, and peer-mediated interventions school-based interventions. Explores other approaches to ASDs, such as complementary and integrative approaches

and non-invasive brain stimulation technologies, including transcranial magnetic stimulation. The push for early screening is resulting in earlier diagnosis of ASDs and the provision of evidence-based interventions that have a positive impact on outcomes. Autism Spectrum Disorders provides a bench-to-bedside guide that is essential reading for health care providers and families facing the challenges inherent in these complex disorders. **Fiduciaries and Trust** Cambridge University Press The Veterans' Claims Examiner Passbook(R) prepares you for your test by allowing you to take practice exams in the subjects you need to study. It provides hundreds of questions and answers in the areas that will likely be covered on your upcoming exam, including but not limited to: claims examining and handling; principles and practices of interviewing; understanding and interpreting written material; preparing written material; and other related areas. **Bayley Scales of Infant and Toddler Development** National Academies Press

Based on Deborah Doucette's personal experience raising a grandchild, this book examines the myriad factors involved in kinship care, specifically when grandparents begin to raise their grandchildren. Filled with true stories from people who have raised their children's children, and including advice from Dr. Jeffrey R. LaCure throughout, this family-focused book looks at this fairly common relationship from all sides. Now in its second edition, *Raising Our Children's Children* has been updated to include recent social developments, such as the trend toward multigenerational family living where children, their parents, and their grandparents all live under one roof. **Recommendations to the Congress** Company Law & Business Explores the interactions of fiduciary law and personal and political trust in private, public and international law. *Conservation Options* Rowman & Littlefield Each year, more than 33 million Americans receive health care for mental or substance-use conditions, or both. Together, mental and substance-use illnesses are the leading

cause of death and disability for women, the highest for men ages 15-44, and the second highest for all men. Effective treatments exist, but services are frequently fragmented and, as with general health care, there are barriers that prevent many from receiving these treatments as designed or at all. The consequences of this are seriousâ€"for these individuals and their families; their employers and the workforce; for the nation's economy; as well as the education, welfare, and justice systems. Improving the Quality of Health Care for Mental and Substance-Use Conditions examines the distinctive characteristics of health care for mental and substance-use conditions, including payment, benefit coverage, and regulatory issues, as well as health care organization and delivery issues. This new volume in the Quality Chasm series puts forth an agenda for improving the quality of this care based on this analysis. Patients and their families, primary health care providers, specialty mental health and substance-use treatment providers, health care

organizations, health plans, purchasers of group health care, and all involved in health care for mental and substanceâ€"use conditions will benefit from this guide to achieving better care. *A Guide to services* National Academies Press Welcome to the Consumer Financial Protection Bureau's Your Money, Your Goals: A financial empowerment toolkit for social services programs! If you're reading this, you are probably a case manager, or you work with case managers. Finances affect nearly every aspect of life in the United States. But many people feel overwhelmed by their financial situations, and they don't know where to go for help. As a case manager, you're in a unique position to provide that help. Clients already know you and trust you, and in many cases, they're already sharing financial and other personal information with you. The financial stresses your clients face may interfere with their progress toward other goals, and providing financial empowerment information and tools is a natural extension of what you are already doing. What is "financial

empowerment" and how is it different from financial education or financial literacy? Financial education is a strategy that provides people with financial knowledge, skills, and resources so they can get, manage, and use their money to achieve their goals. Financial education is about building an individual's knowledge, skills, and capacity to use resources and tools, including financial products and services. Financial education leads to financial literacy. Financial empowerment includes financial education and financial literacy, but it is focused both on building the ability of individuals to manage money and use financial services and on providing access to products that work for them. Financially empowered individuals are informed and skilled; they know where to get help with their financial challenges. This sense of empowerment can build confidence that they can effectively use their financial knowledge, skills, and resources to reach their goals. We designed this toolkit to help you help your clients become financially empowered consumers.

This financial empowerment toolkit is different from a financial education curriculum. With a curriculum, you are generally expected to work through most or all of the material in the order presented to achieve a specific set of objectives. This toolkit is a collection of important financial empowerment information and tools you can access as needed based on the client's goals. In other words, the aim is not to cover all of the information and tools in the toolkit - it is to identify and use the information and tools that are best suited to help your clients reach their goals.

The Healthcare Imperative WHO Regional Office Europe Revised with teachers and learners in mind, the Third Edition of *Elder Law: Practice, Policy, and Problems* comprehensively updates this market-leading casebook. It combines a client-focused approach with in-depth discussions of elder law related policy issues. Designed to be both practical and theoretical, it provides students with specific legal knowledge and a conceptual framework for understanding key issues

confronting older adults and the attorneys who represent them. The author's narrative frames a series of primary materials including cases, statutes, regulations, and sample documents, as well as excerpts from articles designed to stimulate student thinking and discussion. Problems and exercises are numerous. Many relate to client counseling and ask students to imagine themselves in the role of the elder law attorney, and to describe how they would handle various scenarios, such as a client meeting. In addition, questions in each section prompt students to critique key policies, or consider policy changes, and thereby allow students to test their understanding of policies and more deeply think through their consequences. Key Features of the Third Edition: The new edition maintains the book's status as the most up-to-date and cutting-edge elder law casebook with the following key features: Updates to statutory and regulatory materials New demographic and economic information Updates to eligibility criteria for public benefits Greater emphasis on

intersectionality Lessons learned (and legal changes resulting from) the COVID-19 pandemic More excerpts of scholarly articles on key legal, policy, and philosophical dilemmas, designed to help support professors who wish to foster juicy, "big picture" discussions of old age policy Coverage of additional topics including, intergenerational justice, ageism and elderspeak, and family formation in later life Adds a handful of new cases to reflect legal developments and enhance the teaching experience while also moving several longer cases to notes Professors and students will benefit from: Very clearly organized content A client-centered approach Integrated discussion of policy and current issues Relevant cases, statutes, regulations, sample documents, and commentaries that are fully integrated into the casebook All relevant statutory material being in the casebook; no need to require a separate statutory supplement Practice problems of varying difficulty that encourage students to apply what they are learning to realistic client-focused hypothetical

scenarios Questions throughout the text that prompt critical thinking and prepare students to engage in classroom discussion ● Exercises that can be used for either independent or in-class assignments
