Modelling to Solve Real
World Problems

Elsevier

Neoliberalism is easily one of the most powerful discourses to emerge within the social sciences in the last two decades, and the number of scholars who write about this dynamic and unfolding process of socio-spatial transformation is astonishing. Even more surprising though is that there has, until now, not been an attempt to provide a wide-ranging volume that engages with the multiple registers in which neoliberalism has evolved. The

Routledge Handbook of Neoliberalism seeks to offer a comprehensive overview of the phenomenon of neoliberalism by examining the range of ways that it has been theorized, promoted, critiqued, and put into practice in a variety of geographical locations and institutional frameworks. With contributions from over 50 leading authors working at institutions around the world the volumes seven sections will offer a systematic overview of neoliberalism's origins, political implications, social tensions, spaces, natures and environments, and aftermaths in addressing ongoing and emerging debates. The volume aims to provide the first comprehensive

overview of the field and to advance the established and emergent debates in a field that has grown exponentially over the past two decades, coinciding with the meteoric rise of neoliberalism as a hegemonic ideology, state form, policy and program, and governmentality. It includes a substantive introductory chapter and will serve as an invaluable resource for undergraduates, graduate students, and professional scholars alike.

Green Politics

Routledge

The Model Rules of Professional Conduct provides an up-to-date resource for information on legal ethics. Federal, state and local courts in all jurisdictions look to the

Rules for guidance in solving lawyer malpractice cases, disciplinary actions, disqualification issues, sanctions questions and much more. In this volume, black-letter Rules of Professional Conduct are followed by numbered Comments that explain each Rule's purpose and provide suggestions for its practical application. The Rules will help you identify proper conduct in a variety of given situations, review those instances where discretionary action is possible, and define the nature of the relationship between you and your clients, colleagues and the courts.

Academic Conferences and publishing limited

If we were to ask what

is the root cause of our current and unprecedented environmental crisis, climate change, many, particularly on the progressive Left, would refer to the excesses of capitalism—and they'd be right. In *Eco-Nihilism: The Philosophical Geopolitics of the Climate Change Apocalypse*, Wendy Lynne Lee demonstrates that there are no versions of conquest capital compatible with the fact of a finite planet and that a logic whose operating premise is growth is destined to not only exhaust our planetary resources, but also generate profound social injustice and geopolitical violence in its pursuit. Nonetheless, it is clear

that the violence and injustice of capital is selective—some benefit greatly while others are subjugated to its pathological drive to profit. Hence, Lee argues that any comprehensive analysis of what Jason Moore has dubbed the Capitalocene must include an equally probing account of human chauvinism, that is, the axes along which capital is supplied with resources and labor. Defined in terms of race, sex, gender, and species, these axes come ready-made to the advantage of capitalist commodification. Without an understanding of how and why, humanity will remain doomed to settling for a sustainably unjust world as opposed to

realizing a just and desirable one. Indeed, on our current trajectory, we may not even achieve the sustainable. The introduction of climate change into the mix of environmental deterioration, the ever-widening economic gap between global North and global South, and the accelerating violence of terrorism, civil war, and human slavery make of a warming planet a combustible world. The only way out requires ending the myth of endless resources, a rejection of climate change denial, and a radical re-valuation of human-centeredness, not as a locus of power, but as an opportunity to take moral and epistemic responsibility for a world whose biotic

diversity and ecological integrity make the struggle to realize it worthwhile. This solution demands not only an end to capitalism, but the deliberate reclamation of value—aesthetic, moral, and civic—and a radical transformation of both personal and collective conscience. Lee appeals to the experiential aesthetics of John Dewey and the feminist concept of the standpoint of the subjugated. She argues for a version of the precautionary principle informed by an environmentally and socially responsible concept of the desirable future as the clearest path away from the precipice.

**Climate Change,
Migration and
Human Rights** CRC
Press

This book explores recent developments in environmental cost-benefit analysis (CBA). This is defined as the application of CBA to projects or policies that have the deliberate aim of environmental improvement or are actions that affect, in some way, the natural environment as an indirect consequence

Merchants of Doubt
Lexington Books
Climate Change

already having serious impacts on the lives of millions of people across the world. These impacts are not only ecological, but also social, economic and legal. Among the most significant of such impacts is climate change-induced migration. The implications of this on human rights raise pressing questions,

which require serious scholarly reflection. Drawing together experts in this field, Climate Change, Migration and Human Rights offers a fresh perspective on human rights law and policy issues in the climate change regime by examining the interrelationships between various aspects of human rights, climate change and migration. Three key themes are explored: understanding the concepts of human dignity, human rights and human security; the theoretical nexus between human rights, climate change and migration or displacement; and the practical implications and challenges for lawyers and policy-makers of protecting

human dignity in the face of climate change and displacement. The book also includes a series of case studies from Alaska, Bangladesh, Kenya and the Pacific islands which aim to improve our understanding of the theoretical and practical implications of climate change for human rights and migration. This book will be of great interest to scholars of environmental law and policy, human rights law, climate change, and migration and refugee studies.

Edward Elgar

Publishing

Climate change and climate denial have remained largely off the radar in literacy and social studies education. This book

addresses this gap with the design of the Climate Denial Inquiry Model (CDIM) and clear examples of how educators and students can confront two forms of climate denial: science denial and action denial. The CDIM highlights how critical literacies specifically designed for climate denial texts can be used alongside eco-civic practices of deliberation, reflexivity, and counter-narration to help students discern corporate, financial, and politically motivated roots of climate denial and to better understand efforts to misinform the American public, sow doubt and distrust of basic scientific knowledge, and erode support for evidence-based policymaking

and collective civic action. With an emphasis on inquiry-based teaching and learning, the book also charts a path from destructive stories-we-live-by that are steeped in climate denial (humans are separate from nature, the primary goal of society is economic growth without limits, nature is a resource to be used and exploited) to ecojustice stories-To-live by that invite teachers and students to consider more just and sustainable futures. Book Features: Climate Denial Inquiry Model to help educators identify and confront two forms of climate denial: climate science denial and climate action denial. Clear examples of how to integrate critical literacies

designed specifically for climate denial with eco-civic practices of deliberation, reflexivity, and counter-narration. Concrete climate-based inquiry-based teaching and learning pathways in literacy and social studies with much potential for connections across other content areas. A path from destructive stories-we-live-by that are steeped in climate denial to ecojustice stories-To-live by that invite teachers and students to consider more just and sustainable futures. [Global Environment Outlook – GEO-6: Healthy Planet, Healthy People](#) Springer This is an original and wide-ranging account of the careers of a close-knit group of

highly influential ecologists working in Britain from the late 1960s onwards. The book can also be read as a history of some recent developments in ecology. One of the group, Robert May, is a past president of the Royal Society, and the author of what many see as the most important treatise in theoretical ecology of the later twentieth century. That the group flourished was due not only to May's intellectual leadership, but also to the guiding hand of T. R. E. Southwood. Southwood ended his career as Linacre Professor of Zoology at the University of Oxford, where he also served a term as Vice-Chancellor. Earlier, as a professor and director of the Silwood

Park campus of Imperial College London, he brought the group together. Since it began to coalesce at Silwood it has been named here the Silwood Circle. Southwood promoted the interests of its members with the larger aim of raising the profile of ecological and environmental science in Britain. Given public anxiety over the environment and the loss of ecosystems, his actions were well-timed. Ecology, which had been on the scientific margins in the first half of the twentieth century, came to be viewed as a science central to modern existence. The book illustrates its importance to many areas. Members of the Silwood Circle have

acted as government advisors in the areas of conservation and biodiversity, resource management, pest control, food policy, genetically modified crops, sustainable agriculture, international development, defence against biological weapons, and epidemiology and infectious disease control. In recounting the science they carried out, and how they made their careers, the book reflects also on the role of the group, and the nature of scientific success.

Encyclopedia of Environmental Change
Bloomsbury Publishing
“In the heart of this world, the Lord of life, who loves us so much, is always present. He does not abandon us,

he does not leave us alone, for he has united himself definitively to our earth, and his love constantly impels us to find new ways forward. Praise be to him!” – Pope Francis, *Laudato Si’*
In his second encyclical, *Laudato Si’*: On the Care of Our Common Home, Pope Francis draws all Christians into a dialogue with every person on the planet about our common home. We as human beings are united by the concern for our planet, and every living thing that dwells on it, especially the poorest and most vulnerable. Pope Francis’ letter joins the body of the Church’s social and moral teaching, draws on the best scientific research, providing the foundation for “the

ethical and spiritual itinerary that follows.” Laudato Si’ outlines: The current state of our “common home” The Gospel message as seen through creation The human causes of the ecological crisis Ecology and the common good Pope Francis’ call to action for each of us Our Sunday Visitor has included discussion questions, making it perfect for individual or group study, leading all Catholics and Christians into a deeper understanding of the importance of this teaching.

Eco-Nihilism Taylor & Francis
This title tackles issues relevant to leadership in the realm of religion. It explores such themes as the contexts in which religious leaders move,

leadership in communities of faith, leadership as taught in theological education and training, religious leadership impacting social change and social justice, and more. Topics are examined from multiple perspectives, traditions, and faiths.

Laudato Si Routledge
This reference handbook tackles issues relevant to leadership in the realm of the environment and sustainability.

Fundamentals of Environmental Assessment Springer
The Accelerating Transport Innovation Revolution: A Global, Case Study-based Assessment of Current Experience, Cross-sectorial Effects and Socioeconomic Transformations, offers a comprehensive view

of current state-of-the-art and practices around the world to create innovation on a revolutionary scale and connect research to commercial exploitation of its results. It offers a fascinating new model of the innovation process based on theories of biological ecosystems, general systems theory and basins of attraction (represented through space-time graphs well known in mathematics). Furthermore, it considers - through a number of dedicated chapters - key issues and elements of innovation ecosystems, such as: Causal Factors and system constraints affecting the development and sustainability of innovation ecosystems

(Chapter 4); Review of innovation organization and governance in key countries and regions (Chapter 5); the role of technological "Spillovers" (Chapter 6); Collection and use of data for innovation monitoring and benchmarking (Chapter 7); Intellectual Property protection between competing ecosystems (Chapter 8); Economics of innovation (Chapter 9); Public and private sector involvement in Transport innovation creation (Chapter 10); the role of the individual entrepreneur - innovator in energizing change (Chapter 11). Finally, in Chapter 12, there is a thorough summary of key findings. This book uses a paradigmatic approach to augment the innovation

ecosystem model of innovation that integrates beliefs and learning into the innovation ecosystems model. It therefore includes ten case studies from the U.S., Europe and Asia, detailing how innovation is created across continents and different ecosystems and what are the critical lessons to be learned. It does this, effectively, at five different levels of analysis i.e. the individual innovator / entrepreneur level, the organization level (government agency or company), the regional ecosystem level, the nation-state level and the global - systemic or international level. Each level of analysis, reveals unique features of the innovation landscape and the ten

case studies allow the reader to assess when and where specific "enablers" are facilitating innovation especially on a revolutionary scale. The need for the book came from the realization that despite the billions of dollars spent on various research programs over the past 20 years (especially in the public sector), there have been few clear and tangible efforts directed at exploring how innovation production increasingly occurs and the critical factors necessary to sustain large-scale, revolutionary change as the future unfolds. Thus, a primary theme of the book is that understanding how research results translate into market innovation and

implementation, especially understanding the nature of revolutionary innovation, is as important as the creation of innovations themselves. While the focus of the book is on Transportation, the concepts and recommendations presented apply to other fields too. - Formulates and presents a workable and comprehensive new model of innovation - Defines and analyzes many concepts and notions related to innovation, research and market implementation - Examines the critical factors affecting innovation production and successful commercial implementation of research results - Examines

organizational models of coordination, governance, data collection, process analysis and use of intellectual property tools - Includes recent, well-researched and documented case studies of successful innovation ecosystems across the world mainly - but not only - in the Transport field
Resolving Environmental Conflicts, Second Edition Routledge
The aim of this book is to review central concepts in the study of environmental politics and to open up new questions, problems, and research agendas in the field. The volume does so by drawing on a wide range of approaches from critical theory to poststructuralism, and spanning disciplines

including international relations, geography, sociology, history, philosophy, anthropology, and political science. The 28 chapters cover a range of global and local studies, illustrations and cases. These range from the Cochabamba conference in Bolivia to climate camps in the UK; UN summits in Rio de Janeiro and Johannesburg to climate migrants from Pacific islands; forests in Indonesia to Dutch energy governance reform; indigenous communities in Namibia to oil extraction in the Niger Delta; survivalist militias in the USA to Maasai tribesmen in Kenya. Rather than following a regional or issue-based (e.g. water, forests,

pollution, etc) structure, the volume is organised in terms of key concepts in the field, including those which have been central to the social sciences for a long time (such as citizenship, commodification, consumption, feminism, justice, movements, science, security, the state, summits, and technology); those which have been at the heart of environmental politics for many years (including biodiversity, climate change, conservation, eco-centrism, limits, localism, resources, sacrifice, and sustainability); and many which have been introduced to these literatures and debates more recently (biopolitics,

governance, governmentality, hybridity, posthumanism, risk, and vulnerability). Features and benefits of the book: Explains the most important concepts and theories in environmental politics. Reviews the core ideas behind crucial debates in environmental politics. Highlights the key thinkers - both classic and contemporary - for studying environmental politics. Provides original perspectives on the critical potential of the concepts for future research agendas as well as for the practice of environmental politics. Each chapter is written by leading international authors in their field. This exciting new volume will be essential textbook

reading for all students of environmental politics, as well as provocatively presenting the field in a different light for more established researchers.

Critical Environmental Politics SAGE

In the first book to seriously examine the future of libraries in a climate reality-based context, Henk convincingly argues that building a carbon-neutral future for libraries is not only essential but eminently practical.

ICCWS 2018 13th International Conference on Cyber Warfare and Security
SAGE

Harris and Roach present a compact and accessible presentation of the core environmental and resource topics and

more, with analytical rigor as well as engaging examples and policy discussions. They take a broad approach to theoretical analysis, using both standard economic and ecological analyses, and developing these both from theoretical and practical points of view. It assumes a background in basic economics, but offers brief review sections on important micro and macroeconomic concepts, as well as appendices with more advanced and technical material. Extensive instructor and student support materials, including PowerPoint slides, data updates, and student exercises are provided. Congressional-Executive Commission on China Annual Report 2012 American

Bar Association
Emotions, Embodied Cognition and the Adaptive Unconscious argues for the need to consider many other factors, drawn from disciplines such as socio-biology, evolutionary psychology, the study of the emotions, the adaptive unconscious, the senses and conscious deliberation in analysing the complex topography of social action and the making of things. These factors are taken as ecological conditions that shape the contemporary expression of complex societies, not as constraints on human plasticity. Without 'foundations', complex society cannot exist nor less evolve. This is the familiar pairing from complexity

theory: path dependency and dynamic emergence. Inter-disciplinary and complexity perspectives need to be incorporated into the social sciences. Routinely, sociologists think of social phenomena as a distinct field, expressed in the term: the 'social construction of' without apparent need to refer to other material, biological, psychological, material or ecological conditions or agents. This book shows how the familiar sociological dynamics of identity, solidarity, differentiation and communication are shaped through the persistent interaction of unconscious and affective processing with conscious deliberation in newly emergent contexts. It

is this re-expression, not the surpassing, of human characteristics in contemporary social action that needs to re-inform a complex, ecological approach to the theory and methodologies of the social sciences. The book is intended for a postgraduate/research audience and doctoral students to introduce and synthesise inter-disciplinary contributions to research into complexity theory in the social sciences.

Clearing a Way CRC Press

This book gathers the best papers from the HKAECT-AECT 2017 Summer International Research Symposium. Revealing the complex interactions between communication and learning, which are represented by the

symbol “X” in the title, it provides a platform for knowledge exchange on the new ecology for education in the digital era. It also equips readers to handle complex issues in both communication and education, and clarifies the difference between practitioners and academics in communication and in education.

Common Hegemony, Populism, and the New Municipalism

Government Printing Office

Based on the "go to" book in the field of ecological risk assessment, this shorter, principles-based, updated textbook is essential for students and new practitioners who want to understand the purposes of environmental

assessments and how to achieve them. It includes environmental risks to humans as well as nonhuman populations and ecosystems, and most types of environmental assessments. Drawing upon the author’s extensive experience in the field, first as a senior research staff member in the Environmental Sciences Division at Oak Ridge Laboratory and then as science advisor in the United States Environmental Protection Agency’s National Center for Environmental Assessment, the book explains fundamental principles and basic techniques and illustrates them with example applications which carry through multiple chapters and make this book a

practical and hands-on guide. Both the content and the style are inviting and approachable to different levels of students. Features Integrates human health and ecological assessments. Includes epidemiological, risk, causal, impact, and outcome assessments. Focuses on fundamental principles that are applicable in all nations and legal contexts. Employs an engaging style and draws on the author's practical experience. Explains fundamental concepts in short chapters, making it perfect for beginners in the field. Explains the challenges and rewards of a career in environmental assessment. This book is a practical guide for senior and graduate

students in environmental sciences and management, as well as new practitioners of assessment who want to understand the purposes of environmental assessments and how to achieve them.

Our Common Future

Our Sunday Visitor
This comprehensive Research Handbook discusses how the EU has used its regulatory power to steer towards environmentally friendly behaviour, delving into the deep concerns related to the compliance with and enforcement of EU environmental law. It also highlights the important role of civil society's use of environmental procedural rights, and characterizes how the CJEU case law has

contributed to the effective implementation of EU environmental legislation.

The Accelerating Transport Innovation Revolution Taylor & Francis

Published to coincide with the Fourth United Nations Environmental Assembly, UN Environment's sixth Global Environment Outlook calls on decision makers to take bold and urgent action to address pressing environmental issues in order to protect the planet and human health. By bringing together hundreds of scientists, peer reviewers and collaborating institutions and partners, the GEO reports build on sound scientific knowledge to provide governments,

local authorities, businesses and individual citizens with the information needed to guide societies to a truly sustainable world by 2050. GEO-6 outlines the current state of the environment, illustrates possible future environmental trends and analyses the effectiveness of policies. This flagship report shows how governments can put us on the path to a truly sustainable future - emphasising that urgent and inclusive action is needed to achieve a healthy planet with healthy people. This title is also available as Open Access on Cambridge Core.

Handbook of Neoliberalism A&C Black
Common Hegemony,

Populism, and the New Municipalism critically explores the global rise of an alternative democratic politics since the 1990s in both practice and theory, from the Zapatistas' insurrection to the 2011 cycle of democratic contestation and the ensuing municipalist movement in Spain. Staging an alternative to mainstream politics in both its statist and its activist variants, Alexandros Kioupiolis combines a comprehensive and in-depth account of contemporary alter-politics with an extensive treatment of strategic challenges and broaches the question of strategy

through theories of hegemony which are revisited and renewed by taking our lead from contemporary social movements and practices. Specific movements such as 15-M, and new municipalism, are examined to understand how these have transfigured the counter-hegemonic politics in the direction of egalitarianism, diversity, and grassroots self-government. Common Hegemony, Populism, and the New Municipalism will be of interest to researchers and students of contemporary political theory, democratic theory, and social movement studies.
