Masters Theses in the Pure and Applied Sciences Springer  
 The United Nations World Water Assessment Programme (WWAP) is hosted and led by UNESCO. WWAP brings together the work of 31 UN-Water Members and 38 Partners to publish The United Nations World Water Development Report, (WWDR) series. The annual World Water Development Reports focus on strategic water issues. UN-Water Members and Partners, all experts in their respective fields, contribute the latest findings on a specific theme. The 2017 edition of the World Water Development Report focuses on 'Wastewater' and seeks to inform decision-makers, inside and outside the water community, about the importance of managing wastewater as an undervalued and sustainable source of water, energy, nutrients and other recoverable by-products, rather than something to be disposed of or a nuisance to be ignored. The report's title - Wastewater: The Untapped Resource - reflects the critical role that wastewater is poised to play in the context of a circular economy, whereby economic development is balanced with the protection of natural resources and

environmental sustainability, and where a cleaner and more sustainable economy has a positive effect on the water quality. Improved wastewater management is not only critical to achieving the Sustainable Development Goal on clean water and sanitation (SDG 6), but also to other goals of the 2030 Agenda for Sustainable Development.

*Alternative Protein Sources in Aquaculture Diets* Wiley-Blackwell  
 This new study discusses the visual and verbal city sketches which proliferated during the 'journalistic revolution' of the 1830s and 1840s. English, French and German/Austrian illustrated serials illuminate the pivotal position of sketches in the nineteenth-century culture of knowledge and entertainment. Martina Lauster demonstrates how, as a dynamic form of cognition, sketches transformed models of visual and printed media (panorama and encyclopaedia) and of life science (physiology) into a unique kind of sociology, presenting a self-critique of the middle class on the brink of industrial modernity. Marco Armiero is Senior Researcher at the Italian National Research Council and Marie Curie Fellow at the Institute of

Environmental Sciences and Technologies, Universitat Autònoma de Barcelona. He has published extensively on Italian environmental history and edited *Views from the South: Environmental Stories from the Mediterranean World*. -- *Terra 2008* Food & Agriculture Org.

In *Fats that Heal Fats that Kill*, expert Udo Erasmus takes an in-depth look at the oil industry. Read about the politics of health and the way our bodies assimilate oil. Learn about modern healthful oils like flax, evening primrose and hemp. *Good Governance and the European Union* Academic Press  
The actual Code of conduct is also available (1996) (ISBN 9251038341).

*Nature and History in Modern Italy* Plenum Publishing Corporation  
This guide to the treatment of even the most complex patients with primary glomerular diseases is full of practical information collected and organised in an easy-to-read manner, containing not only an evidence-based review of the topic but also practical recommendations from experts in the field

*Radiation Heat Transfer* World Scientific

*Masters Theses in the Pure and Applied Sciences* was first conceived, published, and disseminated by the Center for Information and Numerical Data Analysis and Synthesis (CINDAS) \* at Purdue University in 1957, starting its coverage of theses with the academic year 1955. Beginning with Volume 13, the printing and dissemination phases of the activity were transferred to University Microfilms/Xerox of Ann Arbor, Michigan, with the thought that such an arrangement would be more beneficial to the academic and general scientific and technical community. After five years of this joint undertaking we had concluded that it was in the interest of all concerned if the printing and distribution of the volume were handled by an international publishing house to assure improved service and broader dissemination. Hence, starting with Volume 18, *Masters Theses in the Pure and Applied Sciences* has been disseminated on a worldwide basis by Plenum Publishing Corporation of New York, and in the same year the coverage was broadened to include Canadian universities. All back issues can also be ordered from Plenum. We have reported in Volume 25 (thesis year 1980) a total of 10,308 theses titles from 27 Canadian and 214 United States universities. We are sure that this broader base for theses titles reported will greatly enhance the value of this important annual reference work. While Volume 25 reports theses submitted in 1980, on occasion, certain universities do report theses submitted in previous years but not reported at the time. *Arctic Shipping* S. Karger AG (Switzerland)

Provides annotations to the Principles of Article 9 of the Code of Conduct for Responsible Fisheries. These annotations are meant to serve as general guidance, and should be taken as suggestions or observations intended to assist those interested in identifying their own criteria and options for actions, as well as partners for collaboration, in support of sustainable aquaculture development.

*Omega 3 Oils* Editions Quae Gie

The aim of this book is to show how wine tourism can be used as a model for sustainable economic development, driving economic growth and social development in some locations. It will explore the interaction between tourism and viticulture in wine tourism destinations, while also explaining some of the repercussions of these activities. This book covers various topics including regional development, environmental management, sustainable viticulture, quality management in wineries and wine tourism routes among others. Wine tourism, which combines two important yet distinct economic activities (i.e., tourism and viticulture), has recently emerged as a new tourism product driven by tourists' search for new experiences and wineries' need to diversify their businesses and seek new revenue streams to

boost sales. This new form of tourism, which typically takes place in rural areas and which combines wine production with tourist activities, is becoming important for such regions by providing a complementary income source. It provides a model for sustainable economic development for these regions, which for various reasons may otherwise struggle to develop. Featuring cases and business implications from various locations, this book provides an important source of knowledge—both theoretical and practical—suitable to academics, scholars, researchers, and practitioners in the tourism sector and the wine industry.

**The Omega-3 Connection** Simon and Schuster

Earthen architecture constitutes one of the most diverse forms of cultural heritage and one of the most challenging to preserve. It dates from all periods and is found on all continents but is particularly prevalent in Africa, where it has been a building tradition for centuries. Sites range from ancestral cities in Mali to the palaces of Abomey in Benin, from monuments and mosques in Iran and Buddhist temples on the Silk Road to Spanish missions in California. This volume's sixty-four papers address such themes as earthen architecture in Mali, the conservation of living sites, local knowledge systems and intangible aspects, seismic and other natural forces, the conservation and management of archaeological sites, research advances, and training.

*The Decline of the Sacred in Industrial Society* Bloomsbury Publishing

Solon (c 658-558 BC) is famous as both statesman and poet but also, and above all, as the paramount lawmaker of ancient Athens. Though his works survive only in fragments, we know from the writings of Herodotus and Plutarch that his constitutional reforms against the venality, greed and political power-play of Attica's tyrants and noblemen were hugely influential—and may even be said to have laid the foundations of western democracy. Solon's legal injunctions covered the widest range of topics and issues: economics and labour; sexual morality; social issues; and society and politics. Yet despite their fame and influence (and Solon's life and work generated a lively reception history), no complete edition of these writings has yet been published. This book offers the definitive critical edition of Solon's laws that has long been needed. It comprises the original Greek fragments with English translations, commentaries, a comprehensive introduction and important comparative Latin texts. It will be enthusiastically welcomed by specialists in ancient Greek language and history.

*What is the Code of Conduct for Responsible Fisheries?* Penguin

What I have said will go to prove that true science is the one which teaches us to increase our satisfaction by drawing out the best from nature's productions. M. Henri Braconnot Nancy, 4th April 1830 (Extract from the Note on Casein and Milk, *Annales de Chimie et de Physique* (1830) 43, 351.) The main objective of this work is to provide a biochemical approach for students of food science and technology. It may also be useful to biologists generally and to biochemists in particular in providing a source of reference to help resolve some of their problems. Finally, professionals in the food industry will find here detailed information on aspects of biotechnology. With the continuing development of teaching in this field in the mainstream courses of Instituts Universitaires de Technologiet, Universities and Grandes Ecoles; in France, the need for an *Abn?ge* (Essential Guide) has become urgent. Students have to refer to various specialist works, which are considerable in number, expensive and often out of date. The authors were faced with the task of selecting material and presenting it in such a way that the finished book would be reduced to a size in keeping with the spirit of the *Abrege* collection.

### Learning

A unique resource that describes the ingredients included in an aquaculture diet, species profiles, processing methods, impacts to environment and industry, and more. Aquaculture is and will remain a major food producing sector in the future. To become more efficient and successful in the aquaculture industry, operations need to provide good nutrition. *Alternative Protein Sources in Aquaculture Diets* is a unique source describing the ingredients included in fish and crustacean diets, their nutrient compositions, species profiles, suitability for species, processing methods, and impacts of alternative ingredients on the environment and to the aquaculture industry. World-renowned nutritionists and feed technologists explore practical ways for the aquaculture industry to expand and remain competitive, and discuss ways to develop less expensive alternative sources or protein. Diet costs take up a huge chunk of operating expenditures, with fish meal being one of the most expensive ingredients in the aquaculture diet. *Alternative Protein Sources in Aquaculture Diets* provides detailed knowledge on the use of alternative plant and animal protein sources, offering opportunities to either partially or completely replace fish meal. This comprehensive, up-to-date text discusses the most widely used ingredients as well as various previously under-utilized ingredients which could be of significant potential in the future. The book is extensively referenced and includes numerous helpful tables to clearly present data. Topics discussed in *Alternative Protein Sources in Aquaculture Diets* (for finfish and crustacean species) include: - farmed fish diet requirements - reduction of waste through diet formulation - poultry by-product meal - meat packing by-products - soybean protein foodstuffs - cottonseed meal - lupins - unconventional plant protein supplements.

### **Architects' Data** Hemisphere Pub

This book is concerned with the prediction of thermodynamic and transport properties of gases and liquids. The prediction of such properties is essential for the solution of many problems encountered in chemical and process engineering as well as in other areas of science and technology. The book aims to present the best of those modern methods which are capable of practical application. It begins with basic scientific principles and formal results which are subsequently developed into practical methods of prediction. Numerous examples, supported by a suite of computer programmes, illustrate applications of the methods. The book is aimed primarily at the student market (for both undergraduate and taught postgraduate courses) but it will also be useful for those engaged in research and for chemical and process engineering professionals.

### **Livres hebdo** Ohio University Press

It's true. Specific fats play a crucial role in protecting us from many serious diseases - from heart disease to cancer to manic-depressive illness. Certain fats also have an impact on such everyday complaints as dry skin, intestinal troubles, and achy joints. The problem for most of us is that we hear only about one or two of these "good fats" and figure that by including some healthy oils in our diets, we're covered. What we don't realize is that by not understanding what makes a "good fat" good, we unknowingly create imbalances in our systems that may lead to these terrible disorders - despite our best intentions. In *The Omega-3 Oils*, pioneering researcher and physician Dr. Donald Rudin tells us how we can improve our physical and mental health by correcting these imbalances. Dr. Rudin shows how different fats act within our body, and how modern food-processing techniques have stripped a vital family of oils - the Omega-3 fatty acids - out of our food. He discusses his groundbreaking Omega-3 study, in which people suffering from a

variety of chronic ailments showed remarkable improvement after taking oil rich in Omega-3, in combination with other healthful supplements. He then shows the connection between Omega intake and a variety of modern-day health concerns, including heart disease, skin problems, reproductive difficulties (in both men and women), pregnancy and breastfeeding, mental health, and the problems we experience as we age. Finally, Dr. Rudin presents the Omega Program to help bring our diet, and our health, back into balance.

*Canine and Feline Nutrition* Springer Science & Business Media  
Medicinal plants and their derived products remain as an indispensable source of bioactive molecules that serve as either drug candidates or lead compounds for drug design and discovery. There are several advantages for plant-derived therapeutics including wide availability, diverse pharmacological actions and a generally good profile of safety and tolerability. Over the recent years, there have been numerous reports from clinical studies testifying to the efficacy and safety of medicinal plants and phytochemicals in ameliorating several human diseases. A plethora of basic studies has also unravelled molecular mechanisms underlying the health benefits of herbal medicines. Nevertheless, issues such as identification of bioactive ingredients, standardization of the products and drug interactions remain to be further studied. In this book, we aim to put together several chapters on the medicinal properties and pharmacological action of medicinal plants, plant species and phytochemicals. The goal is to present a comprehensive collection on most of the therapeutic aspects of plant-derived natural products and molecular mechanisms thereof.

This book considers both the present state of Arctic shipping and possible future trends with reference to the various sectors of maritime transportation: cruise tourism, container traffic and bulk shipping. Ports are analysed as tools that support the strategies of coastal states to foster the development of resource extraction, enhance the attractiveness of Arctic shipping lanes and enable the control of maritime activities through coast guard deployment. The aim of this book is to draw a picture of the trends of Arctic shipping. How is traffic evolving in Canada's Arctic, or along the Northern Sea Route? Are there significant differences between bulk and container shipping segments when considering the Arctic market? How are the ports and the hinterland developing and what are the strategies behind those? How is the legal framework shaping the evolution of maritime transportation? The contributors to this book consider all of these questions, and more, as they map out the prospects for Arctic shipping and analyse in detail the development of Arctic shipping as a result of multi-variable interactions. This book will be key reading for industry professionals and post-graduate students alike.

The rapid technological development of new products, coupled with the growing consumer desire for the latest technology, has led to a new environmental problem: products that are discarded prematurely. But behind every problem lies an opportunity. Many of these products can be reprocessed, leading to savings in natural resources, energy, landfill s  
*Pharmacological Properties of Plant-Derived Natural Products and Implications for Human Health* Book Publishing Company

Forests and forestry in temperate regions face what may appear to be contradictory goals: to increase atmospheric carbon capture through sequestration in biomass and soils, while providing a growing share of the resources needed to produce essential material goods and energy for human societies as well

as gradually renewing forests to enable them to adapt to future climate conditions. INRAE and IGN, at the request of the French Ministries responsible for agriculture and forestry, have jointly undertaken a scientific assessment to shed light on the details of this debate
