Manual of Definitive Surgical Trauma Care, Fifth Edition Class Professional Publishing
 PHTLS: Soporte Vital de Trauma Prehospitalario, octava edición, es el siguiente paso en la evolución del principal programa educativo de Trauma Prehospitalario. Durante tres décadas, el PHTLS ha mejorado la calidad del cuidado del paciente traumatizado y ha salvado vidas. La octava edición del PHTLS continúa con la misión de promover la excelencia en el manejo del paciente traumatizado en todos los proveedores involucrados en el cuidado prehospitalario por medio de una educación global. Este programa legendario fue desarrollado a principios de la década de los ochenta del siglo pasado por la Asociación Nacional de Técnicos en Urgencias Médicas (Association of Emergency Medical Technicians, NAEMT), con la cooperación del Comité para el Trauma del Colegio Americano de Cirujanos (American College of Surgeons Committee on Trauma, ACS-COT). El contenido médico se revisa y actualiza de manera continua para que refl eje lo último y lo más actualizado del conocimiento y la práctica. El PHTLS promueve el pensamiento crítico como la base para proporcionar un cuidado de calidad. Se fundamenta en la creencia de que los practicantes de los servicios médicos de urgencia toman las mejores decisiones en beneficio de sus pacientes cuando se les da una buena base de conocimiento y principios clave. La octava edición de PHTLS presenta un nuevo capítulo, Fisiología de la vida y la muerte, que crea un entendimiento sólido de la fisiología de la vida y de la fisiopatología que puede llevar a la muerte. Ese entendimiento es esencial para el proveedor del cuidado prehospitalario para que pueda tratar las anomalías rápidamente, en caso de encontrarlas en el paciente traumatizado. Handbook of Clinical Nursing: Critical and Emergency Care Nursing Amer College of Surgeons

Advances in trauma care have accelerated over the past decade, spurred by the significant burden of injury from the wars in Afghanistan and Iraq. Between 2005 and 2013, the case fatality rate for United States service members injured in Afghanistan decreased by nearly 50 percent, despite an increase in the severity of injury among U.S. troops during the same period of time. But as the war in Afghanistan ends, knowledge and advances in trauma care developed by the Department of Defense (DoD) over the past decade from experiences in Afghanistan and Iraq may be lost. This would have implications for the quality of trauma care both within the DoD and in the civilian

setting, where adoption of military advances in trauma care has become increasingly common and necessary to improve the response to multiple civilian casualty events. Intentional steps to codify and harvest the lessons learned within the military's trauma system are needed to ensure a ready military medical force for future combat and to prevent death from survivable injuries in both military and civilian systems. This will require partnership across military and civilian sectors and a sustained commitment from trauma system leaders at all levels to assure that the necessary knowledge and tools are not lost. A National Trauma Care System defines the components of a learning health system necessary to enable continued improvement in trauma care in both the civilian and the military sectors. This report provides recommendations to ensure that lessons learned over the past decade from the military's experiences in Afghanistan and Iraq are sustained and built upon for future combat operations and translated into the U.S. civilian system.

Textbook of Acute Trauma Care National Academies Press

This book provides a comprehensive overview of damage control resuscitation (DCR), an evidence-based approach to the resuscitation of patients with severe life-threatening hemorrhage (LTH). It focuses on both civilian and military applications as DCR is utilized in civilian trauma situations as well as combat casualty care settings. The book covers the history of fluid resuscitation for bleeding, epidemiology of severe traumatic injuries, prediction of life-threatening hemorrhage, pathophysiology and diagnosis of blood failure, and permissive hypotension. Chapters provide in-depth detail on hemostatic resuscitation principles, dried plasma, dried platelet surrogates, and recent developments in frozen red blood cells and oxygen carriers. The book also discusses how DCR principles can be used in a variety of situations such as when there are large numbers of patients with hemorrhagic lesions, non-trauma scenarios, and on distinct populations such as children. Finally, it concludes with a discussion of training and education methods for the implementation of DCR and remote DCR principles as well as learning healthcare system principles to facilitate the implementation of DCR and ultimately improve outcomes for patients with life-threatening hemorrhage. *Damage Control Resuscitation: Identification and Treatment of Life-Threatening Hemorrhage* is an essential resource for physicians and related professionals, residents, nurses and medical students in emergency medicine, anesthesia, surgery, and critical care, as well as civilian and military EMS providers.

Priorities in Critical Care Nursing - E-Book Elsevier Health Sciences

This new book provides evidence based guidelines for the immediate clinical management of major trauma. It has been written by clinicians with many years of trauma experience, and endorsed as authoritative by Trauma Care (UK). The UK now has highly effective trauma systems. Clinical developments include the introduction of damage control resuscitation, tranexamic acid, blood product resuscitation, novel hybrid resuscitation and an emphasis on the control of major external haemorrhage as part of a new ABCDE approach. Consequently, more individuals with major trauma are surviving than ever before. Optimal pre-hospital care is essential for improved survival rates and reduced morbidity.

AACN Procedure Manual for Progressive and Critical Care - E-Book Jones & Bartlett Learning
Designed for recently graduated RNs and nurses transitioning to a new clinical area, this extensive clinical reference is the best resource to provide essential information on the critical care and emergency care specialty areas. Concise and practical entries provide fundamental coverage of the most common clinical problems and issues encountered in nursing practice today. Alphabetized for easy access, each entry includes a definition and description of the clinical problem; etiology; clinical aspects, such as assessment, nursing interventions, management, and implications; and outcomes. Each entry focuses on the role of the nurse throughout the treatment process, and discusses the role of other health care providers with a focus on multidisciplinary treatment. *Handbook of Clinical Nursing: Critical and Emergency Care* will be of value to nursing faculty, undergraduate and graduate-level nurses, and nursing students at all levels. Entries from this text have been selected from the larger resource, *A Guide to Mastery in Clinical Nursing: The Comprehensive Reference*. ATLS, Advanced Trauma Life Support for Doctors Elsevier Health Sciences

This book describes current, evidence-based guidelines for damage control interventions across the field of trauma care with the aim of enabling clinicians to apply them to best effect in daily clinical practice. Emphasis is placed on the need for trauma surgeons and their teams to recognize that optimal damage control in severely traumatized patients depends upon the combination of immediate assessment, resuscitation, and correct surgical management. The book opens by examining the evolution of damage control and the very significant impact that military damage control interventions have had on civilian emergency health care through improvements as simple as bandaging and tourniquets. Damage control measures in different specialties, including neurosurgery, orthopedics, vascular surgery, cardiothoracic surgery, anesthesia, and critical care, are then covered in detail. Readers will also find helpful information on a range of other important

topics, such as the role of pre-hospital care providers, damage control within the emergency department, adjuncts of damage control, and damage control in austere environments. This book is a 'must read' for all clinicians in the trauma field.

The number of natural and man-made disasters has risen dramatically over the last decade. Natural disasters, industrial accidents and terrorist attacks represent major incidents, often involving multiple casualties. In such cases, health professionals face multiple challenges because the type of medical care required differs from what is taught and provided in their everyday hospital duties. The aim of this book is to inform and prepare healthcare professionals for the challenges posed by major incidents, so that they can act effectively in medical teams sent on humanitarian missions or into conflict zones. It offers a holistic and horizontal approach covering all stages of the disaster management cycle. The book is divided into 5 sections: section I: prehospital emergency services; section ii: hospital response; section iii: management of incidents; section iv: after the disaster; and section v: evaluation, ethical issues, education and research. Healthcare providers will find essential information on the special medical considerations in both prehospital and hospital disaster settings, medical management of disaster response, recovery, mitigation and preparedness. The book offers an interdisciplinary and interprofessional approach, and was written by prominent researchers and experienced practitioners.
