This chapter focuses on adhesives used in direct physiological contact in dental and medical procedures. Activity in both areas has been quite extensive outside the United States for decades. In contrast, adhesive use in medical devices, patches, and plasters has been ongoing in the United States for a long time. In the case of medical devices, adhesion is concerned with the joining of materials such as plastics, elastomers, textiles, metals, and ceramics, which are examined in other chapters of the present volume and are covered in various references [1–6]. The coverage of this chapter is devoted to applications where adhesives are in direct contact with tissues and other live organs.

The second edition of *Effective Grading*—the book that has become a classic in the field—provides a proven hands-on guide for evaluating student work and offers an in-depth examination of the link between teaching and grading. Authors Barbara E. Walvoord and Virginia Johnson Anderson explain that grades are not isolated artifacts but part of a process that, when integrated with course objectives, provides rich information about student learning, as well as being a tool for learning itself. The authors show how the grading process can be used for broader assessment objectives, such as curriculum and institutional assessment. This thoroughly revised and updated edition includes a wealth of new material including: Expanded integration of the use of technology and online teaching A sample syllabus with goals, outcomes, and criteria for student work New developments in assessment for grant-funded projects Additional information on grading group work, portfolios, and service-learning experiences New strategies for aligning tests and assignments with learning goals Current thought on assessment in departments and general education, using classroom work for program assessments, and using assessment data systematically to "close the loop" Material on using the best of classroom assessment to foster institutional assessment New case examples from colleges and universities, including community colleges "When the first edition of *Effective Grading* came out, it quickly became the go-to book on evaluating

student learning. This second edition, especially with its extension into evaluating the learning goals of departments and general education programs, will make it even more valuable for everyone working to improve teaching and learning in higher education." —L. Dee Fink, author, *Creating Significant Learning Experiences* "Informed by encounters with hundreds of faculty in their workshops, these two accomplished teachers, assessors, and faculty developers have created another essential text. Current faculty, as well as graduate students who aspire to teach in college, will carry this edition in a briefcase for quick reference to scores of examples of classroom teaching and assessment techniques and ways to use students' classroom work in demonstrating departmental and institutional effectiveness."

Modern medicine has reached a point where the patient is not treated as a biopsychosocial-spiritual being but rather is seen as a virtual identity consisting of laboratory findings and images. More focus is placed on relieving the symptoms instead of curing the disease. Mostly, patients are turned into lifetime medication-dependent individuals. New medicines are needed to overcome the side effects, complications, resistance, and intolerance caused by pharmacological and interventional therapies. In hopes of drug-free and painless alternative treatments with fewer complications, there has been a trend to revisit traditional methods that have been dismissed by modern medicine. Traditional medicine has to be reevaluated with modern scientific methods to complement and integrate with evidence-based modern medicine.

This second edition of *State of Implementation of the United Nations Convention against Corruption: Criminalization, Law Enforcement and International Cooperation*, which was launched during the 7th session of the Conference of the States Parties (Vienna, 6-10 November 2017). The study is based on the findings and results emanating from the first cycle reviews of the implementation of the Convention by 156 States parties (2010-2015). It contains a comprehensive analysis of the implementation of chapters III (Criminalization and law enforcement) and IV (International cooperation) of the Convention. More specifically, the study: (a) identifies and describes trends and patterns in the implementation of the above-mentioned chapters, focusing on systematic or, where possible, regional commonalities and variations; (b) highlights successes and good practices on the one hand, and challenges in implementation on the other; (c) provides an overview of the emerging understanding of the Convention and differences in the reviews, where they have been encountered.

This book provides a rigorous and practical analysis of sustainable development prospects today by applying the innovative sustainomics framework. Developed by the eminent environmental scientist Mohan Munasinghe, sustainomics explores the practical steps in making the transition from the risky business-as-usual scenario to a safe and sustainable future. Its main message is optimistic – although the problems are serious, an effective response can be mounted to make development more sustainable if initiated immediately. The book explains the key principles underlying sustainomics cogently, concisely and with minimum technical jargon. It illustrates the methodology with empirical case studies that are practical and policy-relevant over a wide range of time and geographic scales, countries, sectors, ecosystems and circumstances. The extensive bibliography is useful to researchers of specific issues within sustainable development. This book appeals to a wide audience, including students, researchers from many disciplines, policy analysts, public and private-sector decision makers, and development practitioners.

Corruption undermines the market and challenges government legitimacy. Its hidden character, however, makes it troublesome to study empirically. *Corrupt Exchanges* seeks to overcome this difficulty using the tools of economics and political science. The papers, presented at the Zentrum für Interdisziplinäre Forschung in Bielefeld, Germany, in 2001, begin a dialogue across disciplinary lines. The contributors are a first-rate group of scholars using diverse techniques, both qualitative and quantitative. Their work demonstrates that, with patience and creativity, the empirical study of corruption is possible and can contribute to the policy debate. One group of papers deals with high-level political corruption especially involving Member States of the European Union. The second group focuses on bureaucratic corruption in developing and transition countries. The papers study particular instances and types of corruption and suggest solutions. This book will interest to those concerned with limiting

corruption worldwide, including the business and the nonprofit communities and international aid and lending organizations. The editors are internationally recognized experts in the study of corruption. Donatella Della Porta is Professor of Political Science at the University of Florence and the author (with Alberto Vannucci) of *Corrupt Exchanges* (1999). Susan Rose-Ackerman is Professor of Law and Political Science at Yale University and the author of *Corruption and Government* (1999).
