Continuous Discovery Habits Pearson Education

In this important, entertaining book, one of the world's most celebrated psychologists, Martin Seligman, asserts that happiness can be learned and cultivated, and that everyone has the power to inject real joy into their lives. In *Authentic Happiness*, he describes the 24 strengths and virtues unique to the human psyche. Each of us, it seems, has at least five of these attributes, and can build on them to identify and develop to our maximum potential. By incorporating these strengths - which include kindness, originality, humour, optimism, curiosity, enthusiasm and generosity -- into our everyday lives, he tells us, we can reach new levels of optimism, happiness and productivity. *Authentic Happiness* provides a variety of tests and unique assessment tools to enable readers to discover and deploy those strengths at work, in love and in raising children. By accessing the very best in ourselves, we can improve the world around us and achieve new and lasting levels of authentic contentment and joy.

A Third University is Possible unravels the intimate relationship between the more than 200 US land grant institutions, American settler colonialism, and contemporary university expansion. Author la paperson cracks open uncanny connections between Indian boarding schools, Black education, and missionary schools in Kenya; and between the Department of Homeland Security and the University of California. Central to la paperson's discussion is the "scyborg," a decolonizing agent of technological subversion. Drawing parallels to Third Cinema and Black filmmaking assemblages, *A Third University is Possible* ultimately presents new ways of using language to develop a framework for hotwiring university "machines" to the practical work of decolonization. Forerunners: *Ideas First* is a thought-in-process series of breakthrough digital publications. Written between fresh ideas and finished books, *Forerunners* draws on scholarly work initiated in notable blogs, social media, conference plenaries, journal articles, and the synergy of academic exchange. This is gray literature publishing: where intense thinking, change, and speculation take place in scholarship.

Why Startups Fail U of Minnesota Press

In a world in which global trade is at risk, where warehouses and airports, shipping lanes and seaports try to guard against the likes of Al Qaeda and Somali pirates, and natural disaster can disrupt the flow of goods, even our "stuff" has a political life. The high stakes of logistics are not surprising, Deborah Cowen reveals, if we understand its genesis in war. In *The Deadly Life of Logistics*, Cowen traces the art and science of logistics over the last sixty years, from the battlefield to the boardroom and back again. Focusing on choke points such as national borders, zones of piracy, blockades, and cities, she tracks contemporary efforts to keep goods circulating and brings to light the collective violence these efforts produce. She investigates how the old military art of logistics played a critical role in the making of the global economic order—not simply the globalization of production, but the invention of the supply chain and the reorganization of national economies into transnational systems. While reshaping the world of production and distribution, logistics is also actively reconfiguring global maps of security and citizenship, a phenomenon Cowen charts through the rise of supply chain security, with its challenge to long-standing notions of state sovereignty and border management. Though the object of corporate and governmental logistical efforts is commodity supply, *The Deadly Life of Logistics* demonstrates that they are

deeply political—and, considered in the context of the long history of logistics, deeply indebted to the practice of war.

Automated testing is a cornerstone of agile development. An effective testing strategy will deliver new functionality more aggressively, accelerate user feedback, and improve quality. However, for many developers, creating effective automated tests is a unique and unfamiliar challenge. xUnit Test Patterns is the definitive guide to writing automated tests using xUnit, the most popular unit testing framework in use today. Agile coach and test automation expert Gerard Meszaros describes 68 proven patterns for making tests easier to write, understand, and maintain. He then shows you how to make them more robust and repeatable--and far more cost-effective. Loaded with information, this book feels like three books in one. The first part is a detailed tutorial on test automation that covers everything from test strategy to in-depth test coding. The second part, a catalog of 18 frequently encountered "test smells," provides trouble-shooting guidelines to help you determine the root cause of problems and the most applicable patterns. The third part contains detailed descriptions of each pattern, including refactoring instructions illustrated by extensive code samples in multiple programming languages.

A Third University Is Possible Simon and Schuster

A NATIONAL BESTSELLER An essential companion to the inspirational classic *The Alchemist*, filled with timeless stories of reflection and rediscovery. From one of the greatest writers of our age comes a collection of stories and parables unlocking the mysteries of the human condition. Gathered from Paulo Coelho's daily column of the same name, *Maktub*, meaning "it is written," invites seekers on a journey of faith, self-reflection, and transformation. As Paulo Coelho explains, "Maktub is not a book of advice—but an exchange of experiences." Each story offers an illuminated path to see life and the lives of our fellow people around the world in new ways, allowing us to tap into universal truths about our collective and individual humanity. As Coelho writes, "a man who seeks only the light, while shirking his responsibilities, will never find illumination. And one who keep his eyes fixed upon the sun . . . ends up blind." These wise tales offer the perspective of talking snakes, old women climbing mountains, disciples querying their masters, Buddha in dialogue, mysterious hermits, and many saints addressing the mysteries of the universe. Following the path of his previous internationally

bestselling works, this thoughtful collection of short, inspirational pieces, introduced in a foreword by the author and illustrated with black-and-white line art throughout, will engage seekers of all ages and backgrounds.

In the 1960s, many believed that the civil rights movement's successes would foster a new era of racial equality in America.

Four decades later, the degree of racial inequality has barely changed. To understand what went wrong, Patrick Sharkey argues that we have to understand what has happened to African American communities over the last several decades. In *Stuck in Place*, Sharkey describes how political decisions and social policies have led to severe disinvestment from black neighborhoods, persistent segregation, declining economic opportunities, and a growing link between African American communities and the criminal justice system. As a result, neighborhood inequality that existed in the 1970s has been passed down to the current generation of African Americans. Some of the most persistent forms of racial inequality, such as gaps in income and test scores, can only be explained by considering the neighborhoods in which black and white families have lived over multiple generations. This multigenerational nature of neighborhood inequality also means that a new kind of urban policy is necessary for our nation's cities. Sharkey argues for urban policies that have the potential to create transformative and sustained changes in urban communities and the families that live within them, and he outlines a durable urban policy agenda to move in that direction.

If you want your startup to succeed, you need to understand why startups fail. "Whether you're a first-time founder or looking to bring innovation into a corporate environment, *Why Startups Fail* is essential reading."—Eric Ries, founder and CEO, LTSE, and New

York Times bestselling author of *The Lean Startup* and *The Startup Way* Why do startups fail? That question caught Harvard Business School professor Tom Eisenmann by surprise when he realized he couldn't answer it. So he launched a multiyear research project to find out. In *Why Startups Fail*, Eisenmann reveals his findings: six distinct patterns that account for the vast majority of startup failures. • **Bad Bedfellows.** Startup success is thought to rest largely on the founder's talents and instincts. But the wrong team, investors, or partners can sink a venture just as quickly. • **False Starts.** In following the oft-cited advice to "fail fast" and to "launch before you're ready," founders risk wasting time and capital on the wrong solutions. • **False Promises.** Success with early adopters can be misleading and give founders unwarranted confidence to expand. • **Speed Traps.** Despite the pressure to "get big fast," hypergrowth can spell disaster for even the most promising ventures. • **Help Wanted.** Rapidly scaling startups need lots of capital and talent, but they can make mistakes that leave them suddenly in short supply of both. • **Cascading Miracles.** Silicon Valley exhorts entrepreneurs to dream big. But the bigger the vision, the more things that can go wrong. Drawing on fascinating stories of ventures that failed to fulfill their early promise—from a home-furnishings retailer to a concierge dog-walking service, from a dating app to the inventor of a sophisticated social robot, from a fashion brand to a startup deploying a vast network of charging stations for electric vehicles—Eisenmann offers frameworks for detecting when a venture is vulnerable to these patterns, along with a wealth of strategies and tactics for avoiding them. A must-read for founders at any stage of their entrepreneurial journey, *Why Startups Fail* is not merely a guide to preventing failure but also a roadmap charting the path to startup success.

Achievement tests play an important role in modern societies. They are used to evaluate schools, to assign students to tracks within schools, and to identify weaknesses in student knowledge. The GED is an achievement test used to grant the status of high school graduate to anyone who passes it. GED recipients currently account for 12 percent of all high school credentials issued each year in the United States. But do achievement tests predict success in life? *The Myth of Achievement Tests* shows that achievement tests like the GED fail to measure important life skills. James J. Heckman, John Eric Humphries, Tim Kautz, and a group of scholars offer an in-depth exploration of how the GED came to be used throughout the United States and why our reliance on it is dangerous. Drawing on decades of research, the authors show that, while GED recipients score as well on achievement tests as high school graduates who do not enroll in college, high school graduates vastly outperform GED recipients

in terms of their earnings, employment opportunities, educational attainment, and health. The authors show that the differences in success between GED recipients and high school graduates are driven by character skills. Achievement tests like the GED do not adequately capture character skills like conscientiousness, perseverance, sociability, and curiosity. These skills are important in predicting a variety of life outcomes. They can be measured, and they can be taught. Using the GED as a case study, the authors explore what achievement tests miss and show the dangers of an educational system based on them. They call for a return to an emphasis on character in our schools, our systems of accountability, and our national dialogue.
