Psychiatric and Mental Health Nursing in the UK
Elsevier Health Sciences
In this updated edition, Kathryn Neeb continues to squarely address mental health within the scope of practical/vocat

ional nursing, emphasizing that LPN/LVNs most commonly care for patients with psychiatric problems in general patient care settings rather than in specialized psychiatric facilities. This targeted approach, along with her accessible, friendly writing style, meets the legal licensing needs for the role of the LPN/LVN thus making *Fundamentals of Mental Health Nursing* the

leader in the LPN educational market. *International Case Studies in Mental Health* Cambridge University Press Psychiatric and Mental Health Nursing in the UK is an adaptation of Australia and New Zealand's foremost mental health nursing text and is an essential resource for both mental health nursing students and qualified nurses. Thoroughly revised and

updated to reflect current research and the UK guidelines as well as the changing attitudes about mental health, mental health services and mental health nursing in UK. Set within a recovery and patient framework, this text provides vital information for approaching the most familiar mental health disorders and students will see in clinical practice, along with

helpful suggestions about what the mental health nurse can say and do to interact effectively with patients and their families. - Gives readers a thorough grounding in the theory of mental health nursing. - Case studies throughout the text allow readers to understand the application of theory in every day practice. - Includes critical thinking challenges and ethical

dilemmas to encourage the reader to think about and explore complex issues. - Exercises for class engagement complement learning and development in the classroom environment. **Essentials of Mental Health Nursing** Oxford University Press With at least one case presentation for each of the mental disorders catalogued in DSM-5 -- and multiple cases

for nearly half of the disorders -- Learning DSM-5® by Case Example has been meticulously designed to aid practitioners and students of all levels in psychology, psychiatry, social work, counseling, and psychiatric nursing develop internalized prototypes of DSM-5 disorders by first describing each disorder in relatable terms and subsequently illustrating

how these symptom constellations manifest in real-life settings using clinical case material. The nearly 200 cases featured in this guide are drawn from the clinical experience of well over 100 clinicians, many of whom are well-known experts in particular areas of diagnosis and treatment. Sensitive to the fact that one of the hallmarks of mental disorders is the wide range of

presentations that are encountered in a real-world setting, many of the disorders described include multiple cases that vary in symptom presentation, gender, age, clinical course, associated impairment in psychosocial functioning, and developmental factors, thus giving readers an appreciation for the heterogeneity typical of these disorders. Each case is complemente

d by a discussion that elaborates the ways in which the case conforms to the DSM-5 prototype or highlights those features of the case that illustrate the heterogeneity. With definitions of potentially unfamiliar medical and psychiatric terms, Learning DSM-5® by Case Example is an accessible resource for readers of all disciplines. And because it guides the

reader through the organizational structure of DSM-5, it is also an ideal reference for courses on psychopathology or abnormal psychology.
