The Celts are commonly considered to be one of the great peoples of Europe, with continuous racial, cultural and linguistic genealogy from the Iron Age to the modern-day 'Celtic fringe'. This book shows, in contrast, that the Celts, as they have been known and understood over two thousand years, are simply the 'other' of the dominant cultural and political traditions of Europe. It is this continuous 'otherness' which lends them apparent continuity and substance.

Bananas and Food Security John Wiley & Sons

The effects of globalization and the momentous changes to the political map of Europe have led to a world in which multiculturalism and ethnic differences have become issues of increasing

importance. In Nordic countries, relationships between new immigrants, local ethnic groups and majorities are created in ongoing and sometimes heated discussions. In transforming multicultural societies, folklore has taken on new manifestations and meanings. How can folklore studies illuminate the present cultural, political and historical changes? *Creating Diversities*. *Folklore, Religion and the Politics of Heritage* seeks answers to this question. It emphasizes two important factors in the cultural and political exchanges among historical minorities, recent immigrants, and the majority groups dictating the conditions of these exchanges. The first factor is religion, which is a powerful tool in the construction of ethnic selves and in the establishment of boundaries between groups. The second factor is the role of national and regional folklore archives and ethnographic and cultural historical museums which create ideas and images of minorities. These representations, created in different political climates, affect the general understanding of the people depicted. Fifteen well-known folklorists and ethnographers from Norway, Sweden, Finland, Estonia and the United States offer insights and background material on these problems. In addition to immigrants and ethnic minorities in the Nordic countries, especially the Sámi, examples

are sought from among the Finno-Ugrian minorities in Russia and the Nordic population in North America.

Feline Clinical Parasitology Studia Fennica Folkloristica

This book has been considered by academicians and scholars of great significance and value to literature. This forms a part of the knowledge base for future generations. So that the book is never forgotten we have represented this book in a print format as the same form as it was originally first published. Hence any marks or annotations seen are left intentionally to preserve its true nature.

Civilization or Barbarism Springer

This book provides up-to-date information on the characteristics of each species of intestinal fluke found in humans and on the management of infections caused by these trematodes. Biology, epidemiology, host-parasite relationships, pathogenicity, clinical aspects, diagnosis, and treatment are all reviewed in detail. The zoonotic intestinal flukes comprise 38 genera belonging to 16 families. They are morphologically diverse and each species has a characteristic life cycle and

geographical distribution. Intestinal fluke infections are commonly considered as tropical endemic diseases in Asian countries, where 6 million people are infected, but the geographical limits and populations at risk are expanding and changing owing to a range of factors, including growing international markets, improved transportation systems, changes in eating habits, demographic trends, and climate change. While the pathogenicity of intestinal flukes is generally mild, the impact in immunocompromised individuals requires clarification and some diagnostic problems remain to be solved. In exploring all aspects of human intestinal fluke infections, this book will be invaluable for clinicians and researchers alike.

Climate Information and Prediction Services Springer

Public Policy Lessons from the AIDS Response in Africa examines how the interplay between national state dynamics in Africa and the global political arena has shaped the global AIDS response, and in this context develops a framework for analysing public policy action more broadly in contemporary Africa. By applying comparative political sociology to AIDS public action, this book identifies four political models that are applicable to public initiatives. Fred Eboko goes on to test these in other domains – namely, the malaria and tuberculosis health subsectors, and the education and environment sectors. By articulating global and national connections and contributing a critical perspective grounded in African scholarship and French political science, the author builds a bold and ambitious framework with the potential to enable coherent and effective public policy action in Africa. This book will be of interest to scholars and students of public health, global health, political science, and development studies, as well as policy-level practitioners in the areas of global health and development.

A Bibliography Of Birds Bioversity International

This book explores African religious practice and its relation to African identity. It takes the problem of faith as its central theme, emphasizing the particular existential tensions dividing yet uniting the Christian and the African. Drawing on Heidegger and Sartre, it analyses these tensions underlying and creating the dialogues of hybridity or metissage.

Explanatory Report on the European Convention on the Transfer of Proceedings in Criminal Matters Soyinfo Center

Parasitic Diseases of Wild Birds provides thorough coverage of major parasite groups affecting wild bird species. Broken into four sections covering protozoa, helminths, leeches, and arthropod parasites, this volume provides reviews of the history, disease, epizootiology, pathology, and population impacts caused by parasitic disease. Taking a unique approach that focuses on the effects of the parasites on the host, *Parasitic Diseases of Wild Birds* fills a unique niche in animal health literature.

History of Soybeans and Soyfoods in Spain and Portugal (1603-2015) Springer Science & Business Media

Proceedings of a symposium jointly organized by the IAEA, FAO and WHO, Aix-en-Provence, 1-5 March 1993. Natural isotopes are among the most powerful tools for investigating past and current environmental changes. The purpose of the symposium was to evaluate the costs and benefits of irradiation for treating various food items either alone or in combination with other processes. The evaluation covered applications of the technology in terms of reducing food losses as well as the possible economic impact of irradiation in controlling or reducing certain food-borne illnesses and in expanding trade in certain food items. Discussion focused on the economic benefits of irradiation to control a number of food-borne diseases, especially those originating from the consumption of food of animal origin, and on the potential economic benefit from radiation as a quarantine treatment for fresh fruits and vegetables.

The Conservation Biology of Tortoises Springer Nature

This History is the first in a century to trace the development and impact of the novel in French from its beginnings to the present. Leading specialists explore how novelists writing in French have responded to the diverse personal, economic, socio-political, cultural-artistic and environmental factors that shaped their worlds. From the novel's medieval precursors to the impact of the internet, the History provides fresh accounts of canonical and lesser-known authors, offering a global perspective beyond the national borders of 'the Hexagon' to explore France's colonial past and its legacies. Accessible chapters range widely, including the French novel in Sub-Saharan Africa, data analysis of the novel system in the seventeenth century, social critique in women's writing, Sade's banned works and more. Highlighting continuities and divergence between and

within different periods, this lively volume offers routes through a diverse literary landscape while encouraging comparison and connection-making between writers, works and historical periods.

Maps of Africa to 1900: A Checklist of Maps in Atlases and Geographical Journals in the Collections of the University of Illinois, Urbana-Cham Routledge

Why do some languages wither and die, while others prosper and spread? Around the turn of the millennium a number of archaeologists such as Colin Renfrew and Peter Bellwood made the controversial claim that many of the world's major language families owe their dispersal to the adoption of agriculture by their early speakers. In this volume, their proposal is reassessed by linguists, investigating to what extent the economic dependence on plant cultivation really impacted language spread in various parts of the world. Special attention is paid to "tricky" language families such as Eskimo-Aleut, Quechua, Aymara, Bantu, Indo-European, Transeurasian, Turkic, Japano-Koreanic, Hmong-Mien and Trans-New Guinea, that cannot unequivocally be regarded as instances of Farming/Language Dispersal, even if subsistence played a role in their expansion.

A Bibliography of Fishes OUP Oxford

The world's most comprehensive, well documented, and well illustrated book on this subject. With extensive index. 23 maps, photographs and illustrations. Free of charge in digital PDF format on Google Books.

The Cambridge History of the Novel in French Springer Nature

Covering a wide range of substances, including opium, cocaine, coffee, tobacco, kola, and betelnut, from prehistory to the present day, this new edition has been extensively updated, with an updated bibliography and two new chapters on cannabis and khat. *Consuming Habits* is the perfect companion for all those interested in how different cultures have defined drugs across the ages. Psychoactive substances have been central to the formation of civilizations, the definition of cultural identities, and the growth of the world economy. The labelling of these substances as 'legal' or 'illegal' has diverted attention away from understanding their important cultural and historical role. This collection explores the rich analytical category of psychoactive substances from challenging historical and anthropological perspectives.

Consuming Habits Springer

This book, a first in its kind, offers a survey of the present state of affairs in media accessibility research and practice. It focuses on professional practices which are relative newcomers within the field of audiovisual translation and media studies, namely, audio description for the blind and visually impaired, sign language, and subtitling for the deaf and the hard-of-hearing for television, DVD, cinema, internet and live performances. Thanks to the work of lobbying groups and the introduction of legislation in some countries, media accessibility is an area that has recently gained marked visibility in our society. It has begun to appear in university curricula across Europe, and is the topic of numerous specialised conferences. The target readership of this book is first and foremost the growing number of academics involved in audiovisual translation at universities? researchers, teachers and students? but it is also of interest to the ever-expanding pool of practitioners and translators, who may wish to improve their crafts. The collection also addresses media scholars, members of deaf and blind associations, TV channels, and cinema or theatre managements who have embarked on the task of making their programmes and venues accessible to the visually and hearing impaired. Table of contents Acknowledgements Jorge DIAZ CINTAS, Pilar ORERO, Aline REMAEL: Media for all: a global challenge Section 1: Subtitling for the deaf and hard-of-hearing (SDH) Aline REMAEL: Sampling subtitling for the deaf and the hard-of-hearing in Europe Clive MILLER: Access symbols for use with video content and information and communications technology devices Christopher STONE: Deaf access for Deaf people: the translation of the television news from English into British Sign Language Joselia NEVES: A world of change in a changing world Vera Lucia SANTIAGO ARAUJO: Subtitling for the deaf and hard-of-hearing in Brazil Section 2: Audio description (AD) Pilar ORERO: Sampling audio description in Europe Joan GREENING, Deborah ROLPH: Accessibility: raising awareness of audio description in the UK Gert VERCAUTEREN: Towards a European guideline for audio description Andrew SALWAY: A corpus-based analysis of audio description Julian BOURNE, Catalina JIMENEZ HURTADO: From the visual to the verbal in two languages: a contrastive analysis of the audio description of *The Hours* in English and Spanish Karin De COSTER, Volkmar MUHLEIS: Intersensorial translation: visual art

Language Dispersal Beyond Farming Bloomsbury Publishing

Challenging societal beliefs, this volume rethinks African and world history from an Afrocentric perspective.

United Nations Juridical Yearbook, 1987 Springer

This volume utilizes the work initiated and executed under a recent major public health initiative, the African Tobacco Situational Analyses (ATSA), which was sponsored by the Canadian government's International Development Research Centre (IDRC) with funds from the Bill and Melinda Gates Foundation. The program was conceived to illuminate the factors that will facilitate the reform of major public health policies, particularly, but not limited to, tobacco. The results, presented in this volume, are an important contribution to the literature on global public health and international development, and comprise the most comprehensive evidence-based analysis of tobacco policy in the African region.

Creating Diversities Cambridge University Press

Covers legislative texts and treaty provisions relating to the legal status of the UN and related intergovernmental organizations; a review of the legal activities, the treaties concerning international law, and the decisions of administrative tribunals of the UN and related intergovernmental organizations; selected legal opinions of the secretaries and judicial decisions on questions relating to the UN and related intergovernmental organizations; and a bibliography. Annotation copyrighted by Book News, Inc., Portland, OR

Analytical Tables of Foreign Trade Palgrave Macmillan

About twenty years ago, there was a recognition in Europe that real benefits would flow from coordinating the manner in which food composition tables were produced in the various countries of Europe. Subsequent development of computerised nutritional data bases has further highlighted the potential advantages of working together. Such cooperation could lead to improved quality and compatibility of the various European nutrient data bases and the values within them. This realisation was one of the driving forces behind the development of the Eurofoods initiative in the 1980's when those people in Europe interested in data on food composition began working together. This initiative received further impetus with the establishment of the Eurofoods-Enfant Concerted Action Project within the framework of the FLAIR (Food-Linked Agro-Industrial Research) Programme of the Commission of the European Communities. It was quickly recognised that the draft guidelines for the production, management and use of food composition data which had been prepared under the aegis of INFOODS (International Network of Food Data Systems, a project of the United Nations University), would be especially applicable to the objectives of the Concerted Action. The guidelines have been written by two recognised experts. Many people associated with FLAIR Eurofoods-Enfant have added constructive criticism and advice to that offered previously by those associated with INFOODS. Thus the guidelines are backed by a consensus in the community of those responsible for the production and use of food composition tables and nutrient data bases.

Parasitic Diseases of Wild Birds John Wiley & Sons

This is first intellectual history of the Caribbean written by a top Caribbean studies scholar. The book examines both the work of natives of the region as well as texts interpretive of the region produced by Western authors. Stressing the experimental and cultural particularity of the Caribbean, the study considers major questions in the field.

Roman Imperialism and Runic Literacy John Benjamins Publishing Company

In this age of increased fundamental and applied research on biodiversity, no single volume was as yet devoted to the various temporal and spatial aspects of aquatic biodiversity. The present book is published in honour of Professor Henri Dumont (Ghent, Belgium) at the occasion of his retirement as Editor-in-Chief of *Hydrobiologia*. The volume presents a selection of contributions on aquatic biodiversity, written by colleagues from the editorial board, fellow editors of aquatic journals and former students and collaborators. Contributions deal with a wide spectrum of topics related to aquatic biodiversity and cover fields such as actual- and palaeolimnology, taxonomy, and fundamental and applied limnology. Even reconnaissance chapters on management and cultural impact of water bodies are included. The book combines state-of-the-art contributions in aquatic sciences.
