Are we tired of hearing that fall is a season, sick of being offered fries and told about the latest movie? Yeah. Have we noticed the sly interpolation of Americanisms into our everyday speech? You betcha. And are we outraged? Hell, yes. But do we do anything? Too much hassle. Until now. In *That's The Way It Crumbles* Matthew Engel presents a call to arms against the linguistic impoverishment that happens when one language dominates another. With dismay and wry amusement, he traces the American invasion of our language from the early days of the New World, via the influence of Edison, the dance hall and the talkies, right up to the Apple and Microsoft-dominated present day, and explores the fate of other languages trying to fend off linguistic takeover bids. It is not the Americans' fault, more the result of their talent for innovation and our own indifference. He explains how America's cultural supremacy affects British gestures, celebrations and way of life, and how every paragraph and conversation includes words the British no longer even think of as Americanisms. Part battle cry, part love song, part elegy, this book celebrates the strange, the banal, the precious and the endangered parts of our uncommon common language.

What is the human cost of the global economic crisis? This year's Global Monitoring Report, *The MDGs after the Crisis*, examines the impact of the worst recession since the Great Depression on poverty and human development outcomes in developing countries. Although the recovery is under way, the impact of the crisis will be lasting and immeasurable. The impressive precrisis progress in poverty reduction will slow, particularly in low-income countries in Africa. No household in developing countries is immune. Gaps will persist to 2020. In 2015, 20 million more people in Sub-Saharan Africa will be in extreme poverty and 53 million more people globally. Even households above the \$1.25-a-day poverty line in higher-income developing countries are coping

by buying cheaper food, delaying other purchases, reducing visits to doctors, working longer hours, or taking multiple jobs. The crisis will also have serious costs on human development indicators: • 1.2 million more children under age five and 265,000 more infants will die between 2009 and 2015. • 350,000 more students will not complete primary education in 2015. • 100 million fewer people will have access to safe drinking water in 2015 because of the crisis. History tells us that if we let the recovery slide and allow the crisis to lead to widespread domestic policy failures and institutional breakdowns in poor countries, the negative impact on human development outcomes, especially on children and women, will be disastrous. The international financial institutions and international community responded strongly and quickly to the crisis, but more is needed to sustain the recovery and regain the momentum in achieving the Millennium Development Goals (MDGs). Developing countries will also need to implement significant policy reforms and strengthen institutions to improve the efficiency of service delivery in the face of fiscal constraints. Unlike previous crises, however, this one was not caused by domestic policy failure in developing countries. So better development outcomes will also hinge on a rapid global economic recovery that improves export conditions, terms-of-trade, and affordable capital flows—as well as meeting aid commitments to low-income countries. Global Monitoring Report 2010, seventh in this annual series, is prepared jointly by the World Bank and the International Monetary Fund. It provides a development perspective on the global economic crisis and assesses the impact on developing countries—their growth, poverty reduction, and other MDGs. Finally, it sets out priorities for policy responses, both by developing countries and by the international community.

Financial Performance presents the foundation concepts underlying the Senior Executive Programmes the Authors have taught together and separately over the last 15 years in Europe, Asia and North America. These programmes include The Oxford Advanced Management Programme The Oxford Senior Executive Finance Programme The INSEAD Advanced Management Programme The IMI, Geneva, Advanced Management Programme The Harvard Advanced Management Programme The Oxford International Executive Programme, Singapore The IMI International Finance Programme, Singapore The book is intended as a reference manual as well as a textbook and will be of value to anyone with an interest in financial performance - particularly senior executives. The developments in modern finance over the last two decades have considerable implications for the way senior executives think about the finance discipline. It is no longer enough to have a rudimentary knowledge of basic finance and a heavy reliance on financial specialists. CEOs of course need excellent financial professionals - however they need to go beyond this and provide strategic leadership. This requires a conceptual framework for dealing with financial matters. This book provides a description of the underlying ideas and will be of value to anyone with an interest in financial performance - particularly senior executives. This book revolves around the concept of value and it is organised into two parts. Part I Performance Measurement Consists of three chapters, all of which focus on the real and fairly complex set of financial statements of DaimlerChrysler AG. The first two chapters provide a detailed guided tour of the financial statements which deconstruct the complexity and then reconstruct the financials to provide a clearer base for analysis. These chapters have been arranged to deal with each line item of financial statements which have been highlighted in such a way to allow the reader to treat the materials as a reference as well as a sequential read. Chapter three presents a framework for evaluating financial health and introduces a cash flow based model for understanding the short and medium term constraints on a firm's growth. This exposition revolves around the concept of sustainable growth. Part 2

Valuation In the second part of the book chapter 4 introduces the cost of capital concept followed by chapter 5 which provides a general source of reference for valuation and a variety of difference applications. Chapter 6 concludes the book with a review of concept of shareholder value from a European perspective. Rory Knight MA(Oxon), MCom, PhD, CA Dean (Emeritus), Templeton College, University of Oxford For the last five years Rory has been Dean of Templeton College, the University of Oxford's business college. During this time he led the Oxford Advanced Management Programme and he created the Oxford Senior Executive Finance Programme. He has considerable experience in business and management development. He is actively involved in briefing the senior executives of leading companies on issues in Finance and Strategy. Prior to coming to Oxford Dr Knight was the deputy director of a foundation within the Swiss National Bank (SNB) and previously a Professor in Finance at IMI, Geneva & IMD, Lausanne. Marc Bertoneche MA, MBA, DBA, Phd Visiting Professor, Harvard Business School Marc is a Professor in Business Administration at the University of Bordeaux and has been on the faculty at INSEAD, the European Institute of Business Administration in Fontainebleau France for more than twenty years. His areas of interest include corporate and financial strategy, mergers and acquisitions, venture capital, financial markets, corporate ownership and governance, risk management and international finance. He is currently visiting professor at the Harvard Business School.

"Chilling, eye-opening, and timely, *Cyber Privacy* makes a strong case for the urgent need to reform the laws and policies that protect our personal data. If your reaction to that statement is to shrug your shoulders, think again. As April Falcon Doss expertly explains, data tracking is a real problem that affects every single one of us on a daily basis." —General Michael V. Hayden, USAF, Ret., former Director of CIA and NSA and former Principal Deputy Director of National Intelligence You're being tracked. Amazon, Google, Facebook, governments. No matter who we are or where we go, someone is collecting our data: to profile us, target us, assess us; to predict our behavior and analyze our attitudes; to influence the things we do and buy—even to impact our vote. If this makes you uneasy, it should. We live in an era of

unprecedented data aggregation, and it's never been more difficult to navigate the trade-offs between individual privacy, personal convenience, national security, and corporate profits. Technology is evolving quickly, while laws and policies are changing slowly. You shouldn't have to be a privacy expert to understand what happens to your data. April Falcon Doss, a privacy expert and former NSA and Senate lawyer, has seen this imbalance in action. She wants to empower individuals and see policy catch up. In *Cyber Privacy*, Doss demystifies the digital footprints we leave in our daily lives and reveals how our data is being used—sometimes against us—by the private sector, the government, and even our employers and schools. She explains the trends in data science, technology, and the law that impact our everyday privacy. She tackles big questions: how data aggregation undermines personal autonomy, how to measure what privacy is worth, and how society can benefit from big data while managing its risks and being clear-eyed about its cost. It's high time to rethink notions of privacy and what, if anything, limits the power of those who are constantly watching, listening, and learning about us. This book is for readers who want answers to three questions: Who has your data? Why should you care? And most important, what can you do about it?

Service Management for Competitive Advantage Prentice Hall Biotechnology is now one of the major growth areas in science and engineering and within this broad discipline enzyme technology is one of the areas earmarked for special and significant developments. This publication is the second edition of *Microbial Enzymes and Biotechnology* which was originally published in 1983. In this edition the editors have attempted to bring together accounts (by the relevant experts) of the current status of the major areas of enzyme technology and specifically those areas of actual and/or potential commercial importance. Although the use of microbial enzymes may not have expanded at quite the rate expected a decade ago, there is nevertheless intense activity and considerable interest in the whole area of enzyme technology. Microbial enzymes have been used in industry for many centuries although it is only comparatively recently that detailed knowledge relating to their nature, properties and function has become more evident. Developments in the 1960s gave a major thrust to the use of microbial enzymes in industry. The commercial success of alkaline proteases and

amyloglucosidases formed a bed-rock for subsequent research and development in the area.

"This textbook surveys the techniques, methods, and theoretical frameworks of contemporary prehistoric archaeology. In our presentation we view prehistoric archaeology as an integral part of the larger field of anthropology, conditioned by the historical development, concepts and goals of its parent discipline. While we treat the evolving perspectives of archaeological method and theory, together with their implications for understanding the prehistoric past, the text is not a manifesto for any single doctrine or 'school' within the field. Rather, it seeks to synthesize those aspects of both the 'traditional' and the 'new' archaeology that have contributed significantly to the current status of prehistoric archaeology."--p. ix.

First published in 2003. Hewett Cottrell Watson was a pioneer in a new science not yet defined in Victorian times - ecology - and was practically the first naturalist to conduct research on plant evolution, beginning in 1834. The correspondence between Watson and Darwin, analysed for the first time in this book, reveals the extent to which Darwin profited from Watson's data. Darwin's subsequent fame, however, is one of the reasons why Watson became almost forgotten. This biography traces both the influences and characteristics that shaped Watson's outlook and personality, and indeed his science, and the institutional contexts within which he worked. At the same time, it makes evident the extent of his real contributions to the science of the plant ecology and evolution.

First published in 1922, the novel "Sitti Nurbaya: A Love Unrealized," by Marah Rusli, retains the poignancy that made it a modern Indonesian classic. In terms of its social impact in what was then the Dutch East Indies, "Sitti Nurbaya" may be compared

to "Uncle Tom's Cabin" in the ante-bellum United States. Even to this day, the issues of injustice and indignities suffered by women that this novel raised continue to be debated throughout the country. Rich in description, dense with ironic foreboding and the inexorable workings of fate, *Sitti Nurbaya* is Samsu and "Sitti Nurbaya"'s ill-fated love story. But in their wishes, the reader might also discern young people's tantalizing dream of what the East Indies society might become, or could become, if only local genius, embodied in a modernizing youth emancipated from stifling traditions, could fuse with European genius in mutual respect and admiration. This too was, of course, a dream never to be realized, and one perhaps which never could have been realized.

Information Theory, Inference and Learning Algorithms Grand Central Publishing

This book provides a fundamental and practical introduction to

radio frequency and microwave engineering and physical aspects of wireless communication. In this book, the author addresses a wide range of radio-frequency and microwave topics with emphasis on physical aspects including EM and voltage waves, transmission lines, passive circuits, antennas, radio wave propagation. Up-to-date RF design tools like RF circuit simulation, EM simulation and computerized Smith charts, are used in various examples to demonstrate how these methods can be applied effectively in RF engineering practice. Design rules and working examples illustrate the theoretical parts. The examples are close to real world problems, so the reader can directly transfer the methods within the context of their own work. At the end of each chapter a list of problems is given in order to deepen the reader's understanding of the chapter material and practice the new competences. Solutions are available on the author's website. Key Features: Presents a wide range of RF topics with emphasis on

physical aspects e.g. EM and voltage waves, transmission lines, passive circuits, antennas. Uses various examples of modern RF tools that show how these methods can be applied productively in RF engineering practice. Incorporates various design examples using circuit and electromagnetic (EM) simulation software. Discusses the propagation of waves: their representation, their effects, and their utilization in passive circuits and antenna structures. Provides a list of problems at the end of each chapter. Includes an accompanying website containing solutions to the problems (http://www.fh-dortmund.de/gustrau_rf_textbook). This will be an invaluable textbook for bachelor and masters students on electrical engineering courses (microwave engineering, basic circuit theory and electromagnetic fields, wireless communications). Early-stage RF practitioners, engineers (e.g. application engineer) working in this area will also find this book of interest.
