Convention on the Recognition of Studies, Diplomas, and Degrees Concerning Higher Education in the States Belonging to the Europe Region Editions Bréal

In recent years, technological advancements have enabled higher-learning institutions to offer millions of independent learners the opportunity to participate in open-access online courses. As this practice expands, drawing considerable media attention, questions continue to arise regarding pedagogical methodology and the long-term viability of open learning. Furthering Higher Education Possibilities through Massive Open Online Courses seeks to provide a space for discussion of MOOCs: what they mean for the learning process, how they are redefining the concept of a classroom, and what effects they may have on the role of teachers. Featuring emerging research on a variety of topics relating to distance education, informal learning, as well as educational costs and funding, this book is aimed at teachers, administrators, business professionals, and designers of both curricular resources and e-classroom technology.

This book constitutes revised selected papers from the workshops held at 25th International Conference on Parallel and Distributed Computing, Euro-Par 2019, which took place in Göttingen, Germany, in August 2019. The 53 full papers and 10 poster papers presented in this volume were carefully reviewed and selected from 77 submissions. Euro-Par is an annual, international conference in Europe, covering all aspects of parallel and distributed processing. These range from theory to practice, from small to the largest parallel and distributed systems and infrastructures, from fundamental computational problems to full-edged applications, from architecture, compiler, language and interface design and implementation to tools, support infrastructures, and application performance aspects. Chapter "In Situ Visualization of Performance-Related Data in Parallel CFD Applications" is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.

Making Integration Work: Assessment and Recognition of Foreign Qualifications Springer Science & Business Media

Today, a substantial portion of higher education is provided outside of the traditional universities in non-university institutions with a multitude of varied characteristics. In recent decades, higher education systems have been subjected to many changes and reforms throughout the world. One of the most important was undoubtedly the expansion of higher education in the second half of the last century from an elite system to one for the masses. While institutions of higher learning have been in existence for approximately 1,000 years, this exponential growth has been much more recent.

This movement toward mass higher education has created substantial national impacts on the development of the systems of higher education. While common denominators of change and adaptation can be identified globally, there remain important differences from country to country. There are many factors challenging higher education today and in the foreseeable future. In one form or another, these issues and trends can be seen in higher education systems throughout the world. They include chronic underfunding, marketisation and competition, alternative providers, massification, internationalisation, governance, leadership, strategic management, accountability, accreditation, and social relevance. Another key factor for many countries, especially in Europe, and the focus of this book, is the current and future status of the higher education systems that differentiate the university and non-university sectors.

Level-setting and recognition of learning outcomes Verlag Barbara Budrich

What are today's main concepts and theories - and the main stakes - associated with the issue of competences in organisations? Several topics are discussed, including competence issues regarding the evolution of work, professionalisation, competence evaluation, competence management, and the competences of adult educators and trainers, as well as European policies regarding competence needs and development. From the Contents: Changes in Work and Competences Professionalisation and the Development of Competences in Education and Training The Role of Professional Didactics in Skills Development for Training and Education Professionals Competence Evaluation Processes in Adult Education Competence Management and Adult Education Changes in Vocational Training and New Models of Competences for Individuals

Spanish education system 2009 Taylor & Francis

Using case studies from schools and colleges, this book outlines different forms of assessment, highlights their purposes, and provides practical guidelines to their implementation.

One of the main tasks of the Institute for Teacher Training and Educational Research and Innovation (IFIIE), is, since decades, the periodic preparation of reports describing the Spanish education system in a detailed and up-to-date way. This report constitutes a brief version of the one recently carried out by the IFIIE: The Spanish Education System 2009. Its methodology of work has been structured into three stages: 1) search, analysis, choice and classification of both state and regional regulations as well as official statistics, 2) juxtaposition of the information obtained, presented in tables and figures, and 3) comparison in order to understand and identify trends and convergences and divergences in state and regional education. As a result, two volumes with complex, thorough and detailed information on the education system and its different aspects are provided. This brief version consists of 14.

"The Encyclopedia of Library and Information Science provides an outstanding resource in 33 published volumes with 2 helpful indexes. This thorough reference set--written by 1300 eminent, international experts--offers librarians, information/computer scientists, bibliographers, documentalists, systems analysts, and students, convenient access to the techniques and tools of

both library and information science. Impeccably researched, cross referenced, alphabetized by subject, and generously illustrated, the Encyclopedia of Library and Information Science integrates the essential theoretical and practical information accumulating in this rapidly growing field."

Evaluation of Selected Two-year College Certificate and Diploma Programs Routledge

This volume presents a rich account of the development of accreditation and evaluation in 20 European countries. It shows how accreditation is becoming a main mechanism in the steering of higher education across Europe. The book is unique in its analysis of forces driving towards the spread of different models of accreditation in the emerging European Higher Education area.

Competence and Competence Development IT Governance Ltd

This book constitutes selected papers from the 19th European, Mediterranean, and Middle Eastern Conference, EMCIS 2022, which was held virtually during December 7-8, 2022. EMCIS covers technical, organizational, business, and social issues in the application of information technology and is dedicated to the definition and establishment of Information Systems (IS) as a discipline of high impact for IS professionals and practitioners. It focuses on approaches that facilitate the identification of innovative research of significant relevance to the IS discipline following sound research methodologies that lead to results of measurable impact. The 47 papers presented in this volume were carefully reviewed and selected from a total of 136 submissions. They were organized in topical sections named: Artificial intelligence; big data and analytics; blockchain technology and applications; cloud computing; digital governance; digital services and social media; emerging computing technologies and trends for business process management; enterprise systems; information system security and information privacy protection; innovative research projects; IT governance and alignment; management and organizational issues in information systems; and metaverse.

This book explores the current and future impacts of blockchain technologies, such as cryptocurrency, on the education system. Blockchain is a disruptive technology based on a shared, distributed ledger, where transactions are registered by consensus in a network of peers, using cryptographic mechanisms that render the records virtually immutable and, ideally, enable transparency, auditability, and resilience. What role, then, could it play in fostering transformative approaches such as student-centred teaching and learning, distributed learning environments, and lifelong learning? This book provides essential perspectives into blockchain applications and challenges within education and offers a broader view of blockchain technology against existing information and communication technologies used in education. Spanning the effects on institutions, students, and the labor market, these chapters offer critical reviews and analyses of current research, practical first-hand applications of blockchain in education, and original conceptual

models.

Bulletin Springer Science & Business Media

Anke Hanft and Michaela Knust The present study examines and compares the structure and organisation of continuing higher education in six countries: Austria, Finland, France, Germany, the UK and the USA. The focus is not just on current continuing education provisions at higher education institutions but also on the institutions themselves and their surrounding milieu. The study also attempts to move away from a purely national angle and to approach the topic from an international perspective. The conclusion is reached that when it comes to the development, establishment and professional implementation of continuing education provisions, German higher education institutions lag behind the other countries in the comparison in almost all areas. The main findings in terms of the three levels 'system', 'institution', and 'programme' are summarised below. 1 Continuing Education in the Higher Education System There are considerable divergences, both nationally and internationally, in the definition of the German term "wissenschaftliche Weiterbildung" ("academic continuing education"). In the English-speaking world, a variety of terms such as "lifelong learning", "adult education", "continuing education", "continuing higher education", "university-level continuing education" or "continuing professional development" are often used as synonyms without any precise differentiation - and this is not perceived as a problem.

Statistics of Land-grant Colleges and Universities UNESCO Publishing

Conventional apprenticeships and older methods of professional training are not providing enough skilled workers - governments, companies and colleges are now using open and distance learning to fill these gaps. Published in association with the Commonwealth of Learning, this unique review provides detailed analysis of worldwide experiences of vocational training and distance education. It looks at recent policy and practice at different levels - from transnational programmes and national policies to institutional and programme models. Offering guidance on how distance education and new technologies are being used to support vocational education and training, this book will help senior institutional managers and policy makers to understand and appreciate: * the role distance education can play in increasing skills levels in young people and the existing workforce * the challenges in using educational technologies, and distance education to deliver vocational education and training * how to devise effective policies to meet these challenges.

Business continuity planning is a process of continual improvement, not a matter of writing a plan and then putting your feet up. Attempting to validate every aspect of your plan, however - particularly in a live rehearsal situation - could create a disaster of your own making. Validating Your Business Continuity Plan examines the three essential components of validating a business continuity plan - exercising, maintenance and review - and outlines a controlled and systematic approach to BCP validation while considering each component, covering methods and techniques such as table-top reviews, workshops and live rehearsals. The book also takes account of industry standards and guidelines to help steer the reader through the validation process, including the

international standard ISO 22301 and the Business Continuity Institute's Good Practice Guidelines. In addition, it provides a number of case studies based on the author's considerable experience – some of them successful, others less so – to highlight common pitfalls and problems associated with the validation process.
