## LEWIS JONAS

---

*Foreign Commerce Weekly* Kodansha

While successfully preventing earthquakes may still be beyond the capacity of modern engineering, the ability to mitigate damages with strong structural designs and other mitigation measures are well within the purview of science. *Fundamental Concepts of Earthquake Engineering* presents the concepts, procedures, and code provisions that are currentl

*The Commercial & Financial Chronicle ...* CRC Press

Monthly magazine devoted to topics of general scientific interest.

*Opinions Rendered* Springer Science & Business Media

This concise work provides a general introduction to the design of buildings which must be resistant to the effect of earthquakes. A major part of this design involves the building structure which has a primary role in preventing serious damage or structural collapse. Much of the material presented in this book examines building structures. Due to the recent discovery of vertical components, it examines not only the resistance to lateral forces

but also analyses the disastrous influence of vertical components.

The work is written for Practicing Civil, Structural, and Mechanical Engineers, Seismologists and Geoscientists. It serves as a knowledge source for graduate students and their instructors. *Iron Age and Hardware, Iron and Industrial Reporter* No Starch Press

On 11 September 1973, the Chilean Chief of the Armed Forces Augusto Pinochet overthrew the Popular Unity government of Salvador Allende and installed a military dictatorship. Yet this is a book not of parties or ideologies but public history. It focuses on the memorials and memorialisers at seven sites of torture, extermination, and disappearance in Santiago, engaging with worldwide debates about why and how deeds of violence inflicted by the state on its own citizens should be remembered, and by whom. The sites investigated -- including the infamous National Stadium -- are among the most iconic of more than 1,000 such sites throughout the country. The study grants a glimpse of the depth of feeling that survivors and the families of the detained-disappeared and the politically executed bring to each of the sites. The book traces their struggle to memorialise each one,

and so unfolds their idealism and hope, courage and frustration, their hatred, excitement, resentment, sadness, fear, division and disillusionment.

The Economist IWA Publishing

In *Cooking Data* Crystal Biruk offers an ethnographic account of research into the demographics of HIV and AIDS in Malawi to rethink the production of quantitative health data. While research practices are often understood within a clean/dirty binary, Biruk shows that data are never clean; rather, they are always “cooked” during their production and inevitably entangled with the lives of those who produce them. Examining how the relationships among fieldworkers, supervisors, respondents, and foreign demographers shape data, Biruk examines the ways in which units of information—such as survey questions and numbers written onto questionnaires by fieldworkers—acquire value as statistics that go on to shape national AIDS policy. Her approach illustrates how on-the-ground dynamics and research cultures mediate the production of global health statistics in ways that impact local economies and formulations of power and expertise.

Earthquake Resistant Buildings State University of New York Press

Anthropologists who talk about ethics generally mean the code of practice drafted by a professional association for implementation by its members. As this book convincingly shows, such a conception is far too narrow. A more radical approach is to recognize that moral judgments are made at every juncture of scientific practice and they require a negotiation of responsibility with all stakeholders in the research enterprise. Embedding Ethics questions why ethics have been divorced from scientific expertise. Invoking different disciplinary practices from biological, archaeological, cultural, and linguistic anthropology, contributors show how ethics should be resituated at the heart of, rather than exterior to, scientific activity. Positioning the researcher as a negotiator of significant truths rather than an adjudicator of a priori precepts enables contributors to relocate ethics in new sets of social and scientific relationships triggered by recent globalization processes - from new forms of intellectual and cultural ownership to accountability in governance, and the very ways in which people are studied. Case studies from ethnographic research, museum display, archaeological fieldwork and professional monitoring illustrate both best practice and potential pitfalls. This important book is an essential guide for all anthropologists who wish to be active contributors to the discussion on ethics and the ethical practice of their profession.

**Bashō's Journey** Routledge

This fourth edition of *Organic Waste Recycling* is fully updated with new material to create a comprehensive and accessible textbook: - New chapter on constructed wetlands for wastewater and faecal sludge stabilization. - New sections on: waste recycling vs. climate change and water; faecal sludge and its characteristics; hydrothermal carbonization technology; up-to-date environmental criteria and legislation and environmental risk assessment. - New case studies with emphasis on practices in both developed and developing countries have been included, along with more exercises at the end of chapters to help the readers understand the technical principles and their application. - Novel concepts and strategies of waste management are presented. - Up-to-date research findings and innovative technologies of waste recycling program are provided. This textbook is intended for undergraduate and graduate students majoring in environmental sciences and engineering as well as researchers, professionals and policy makers who conduct research and practices in the related fields. It is essential reading for experts in environmental science and engineering and

sustainable waste reuse and recycling in both developed and developing countries.

**A Hole in the Bottom of the Sea** University of Illinois Press

*Dive into Systems* is a vivid introduction to computer organization, architecture, and operating systems that is already being used as a classroom textbook at more than 25 universities. This textbook is a crash course in the major hardware and software components of a modern computer system. Designed for use in a wide range of introductory-level computer science classes, it guides readers through the vertical slice of a computer so they can develop an understanding of the machine at various layers of abstraction. Early chapters begin with the basics of the C programming language often used in systems programming. Other topics explore the architecture of modern computers, the inner workings of operating systems, and the assembly languages that translate human-readable instructions into a binary representation that the computer understands. Later chapters explain how to optimize code for various architectures, how to implement parallel computing with shared memory, and how memory management works in multi-core CPUs. Accessible and easy to follow, the book uses images and hands-on exercise to break down complicated topics, including code examples that can be modified and executed.

**The Oölogist** Springer

This book describes the available technologies that can be employed to reduce energy consumption and greenhouse emissions in the steel- and ironmaking industries. Ironmaking and steelmaking are some of the largest emitters of carbon dioxide (over 2Gt per year) and have some of the highest energy demand (25 EJ per year) among all industries; to help mitigate this problem, the book examines how changes can be made in energy efficiency, including energy consumption optimization, online monitoring, and energy audits. Due to negligible regulations and unparalleled growth in these industries during the past 15-20 years, knowledge of best practices and innovative technologies for greenhouse gas remediation is paramount, and something this book addresses. Presents the most recent technological solutions in productivity analyses and dangerous emissions control and reduction in steelmaking plants; Examines the energy saving and emissions abatement efficiency for potential solutions to emission control and reduction in steelmaking plants; Discusses the application of the results of research conducted over the last ten years at universities, research centers, and industrial institutions.

*Basho* Duke University Press

Originally published in 1953, *Burning Valley* tells the story of Benedict Bulmanis, son of a Lithuanian immigrant steelworker in western Pennsylvania. Determined to become a priest, Benedict faces great inner conflict as he witnesses the steelworkers' struggle against the destruction of their homes as well as the separation of classes that even the church cannot escape. As the story unfolds, Benedict discovers his beliefs and values changing and becomes more sympathetic with the workers and union organizers. Alan Wald's introduction focuses on the semi-autobiographical aspect of *Burning Valley* as well as its "multifaceted dramatization of ethnicity and race".

Street Railway Section of the Commercial & Financial Chronicle Praeger

In *Bashō's Journey*, David Landis Barnhill provides the definitive translation of Matsuo Bashō's literary prose, as well as a companion piece to his previous translation, *Bashō's Haiku*. One of the world's greatest nature writers, Bashō (1644–1694) is well known for his subtle sensitivity to the natural world, and his writings have influenced contemporary American environmental writers such as Gretel Ehrlich, John Elder, and Gary Snyder. This

volume concentrates on Bashō's travel journal, literary diary (Saga Diary), and haibun. The premiere form of literary prose in medieval Japan, the travel journal described the uncertainty and occasional humor of traveling, appreciations of nature, and encounters with areas rich in cultural history. Haiku poetry often accompanied the prose. The literary diary also had a long history, with a format similar to the travel journal but with a focus on the place where the poet was living. Bashō was the first master of haibun, short poetic prose sketches that usually included haiku. As he did in Bashō's Haiku, Barnhill arranges the work chronologically in order to show Bashō's development as a writer. These accessible translations capture the spirit of the original Japanese prose, permitting the nature images to hint at the deeper meaning in the work. Barnhill's introduction presents an overview of Bashō's prose and discusses the significance of nature in this literary form, while also noting Bashō's significance to contemporary American literature and environmental thought. Excellent notes clearly annotate the translations.

Commercial and Financial Chronicle U.S. Navy Seabee Museum  
This book describes improvements in the iron and steel making process in the past few decades. It also presents new and improved solutions to producing high quality products with low greenhouse emissions. In addition, it examines legislative regulations regarding greenhouse emissions all around the world and how to control these dangerous emissions in iron and steel making plants.

### **A Japanese and English Dictionary Springer**

Matsuo Basho stands today as Japan's most renowned writer, and one of the most revered. Yet despite his stature, Basho's complete haiku have never been collected under one cover. Until now. To render the writer's full body of work in English, Jane Reichhold, an American haiku poet and translator, dedicated over ten years to the present compilation. In *Barbo: The Complete Haiku* she accomplishes the feat with distinction. Dividing the poet's creative output into seven periods of development, Reichhold frames each period with a decisive biographical sketch of the poet's travels, creative influences, and personal triumphs and defeats. Supplementary material includes two hundred pages of scrupulously researched notes, which also contain a literal translation of the poem, the original Japanese, and a Romanized reading. A glossary, chronology, index of first lines, and explanation of Basho's haiku techniques provide additional background information. Finally in the spirit of Basho, elegant semi-e ink drawings by well-known Japanese artist Shiro Tsujimura front each chapter.
