#### Detail

The classic guide-revised and updated. The book that builders, architects, and students

have relied on for almost 20 years has been completely updated to cover new materials, construction methods, and the latest building code revisions. The standard reference in

its field, Rob Thallons Graphic Guide to Frame Construction is the ultimate visual guide to building with wood. Filled with hundreds of detailed drawings, helpful annotations, and field-

tested advice, the guide covers foundations, floors, walls, roofs, and stairs. This third revised edition also offers additional information on advanced framing, engineered and composite materials, and construction in high-wind and seismic areas.

Barn Club New Society Publishers Hand Hewn is a gorgeous celebration of the traditions and artistry of timber-frame building, a 7,000-year-old

craft that holds an enduring attraction for its simple elegance and resilience. Internationally renowned timber-frame architect and craftsman Jack A. Sobon offers a fascinating look at how the natural, organic forms of trees become the framework for a home, with profiles of the classic tools he uses to hand hew and shape each timber, and explanations of the engineering of the wooden

joinery that connects the timbers without a single nail. Inspiring photos of Sobon's original interior home designs, as well as historical examples of long-lived structures in Europe and North America, make this a compelling tribute to the lasting value of artisanal craftsmanship and a thoughtful, deliberate approach to designing buildings. will reveal that much timber-work is appreciably older than their owners might think. This book will be a source of pride and inspiration to all who work in timber today, showing that the master carpenters of the past achieved their highest levels of craftsmanship well before the master masons, and that they were their equals as medieval architects. Beginning as a young upstart with wild

theories, Hewett grew to become the accepted authority on all matters of historic carpentry and a pioneer of a whole new technology in the dating of ancient buildings. In English Historic Carpentry, he provides the definite statement of his work, superbly illustrated by his own drawings. As Hewett maintained, 'the building is the document' and this book will teach you how to read

the evidence that is written in wood.

All those of us without traditional skills need to know to build with timber framing. Many natural building methods rely upon the use of post and beam frame structures that are then in-filled with straw, cob, cordwood, or more conventional wall materials. But traditional timber framing employs the use of finely crafted jointing and wooden pegs, requiring a high degree of craftsmanship and training, as well as much time

and expense. However, there is another way... Timber Framing for the Rest of Us describes the timber framing methods used by most contractors, farmers, and owner-builders, methods that use modern metal fasteners, special screws, and common sense building principles to accomplish the same goal in much less time. And while there are many good books on

traditional timber framing, this is the first to describe in depth these more common fastening methods. The book includes everything an owner-builder needs to know about building strong and beautiful structural frames from heavy timbers, including: the historical background of timber framing crucial design and structural considerations procuring timbers- including different

woods, and recycled materials foundations, roofs, and in-filling considerations the common fasteners. A detailed case study of a timber frame project from start to finish completes this practical and comprehensive guide, along with a useful appendix of span tables and a bibliography. Highly illustrated, this book enables 'the rest of us' to build like the professionals and will appeal to

owner-builders, contractors and architects alike.
