Parliamo italiano! Walter de Gruyter GmbH & Co KG

A new collective volume with over twenty important studies on less well-studied dialects of ancient Greek, particularly of the northern regions. The book covers geographically a broad area of the classical Greek world ranging from Central Greece to the overseas Greek colonies of Thrace and the Black Sea. Particular emphasis is placed on the epichoric varieties of areas on the northern fringe of the classical Greek world, including Thessaly, Epirus and Macedonia. Recent advances in research are taken into consideration in providing state-of-the art accounts of these understudied dialects, but also of more well-known dialects like Lesbian. In addition, other papers address special intriguing topics in these, but also in other dialects, such as Thessalian, Lesbian and Ionic, or focus on important multi-dialectal corpora such as the oracular tablets from Dodona. Finally, a number of studies examine broader topics like the supraregional Doric koinai or the concept of dialect continuum, or even explore the possibility of an ancient Balkansprachbund, which included Greek too. This new reference work covers a gap in current research and will be indispensable for people interested in Greek dialectology and ancient Greek in general.

The text follows a more visual approach by integrating maps, photos, regalia, and cultural notes that offer a vibrant image of Italy. The chapters are organized around functions and activities. Cultural information has been updated to make the material more relevant. In addition, discussions on functional communications give readers early success in the language and encourage them to use it in practical situations.

Uno dei miti più resistenti nell'immaginario economico è che i fondi d'investimento finanzino buone idee o imprenditori creativi. La realtà, molto più sensata, è che la finanza privata investe in industrie trasformative, che nel medio-lungo termine possano disporre di un vantaggio competitivo rispetto all'insieme del mercato. Piuttosto resistente è anche l'idea che il successo imprenditoriale dipenda esclusivamente da iniezioni di capitale di rischio nell'impresa. La realtà, molto meno intuitiva, è che la finanza privata attiva soprattutto leve non finanziarie, quali la disciplina di mercato, il trasferimento di know-how e la cultura d'impresa. Questo saggio racconta la trasformazione dell'economia attraverso il finanziamento di tecnologie dirompenti e discute il ruolo degli investitori quale agenti sistemici nell'economia, illustrando le tecniche di uso del capitale privato nel contesto della risoluzione delle crisi determinate da fasi economiche recessive e da shock esogeni

In order to develop new types of information media and technology, it is essential to model complex and flexible information processing in living systems. This book presents a new approach to modeling complex information processing in living systems. Traditional information-theoretic methods in neural networks are unified in one framework, i.e. a-entropy. This new approach will enable information systems such as computers to imitate and simulate human complex behavior and to uncover the deepest secrets of the human mind.

This third volume of Gyllenbok's encyclopaedia of historical metrology comprises the second part of the compendium of measurement systems and currencies of all sovereign states of the modern World (J-Z). Units of measurement are of vital importance in every civilization through history. Since the early ages, man has through necessity devised various measures to assist him in everyday life. They have enabled and continue to enable us to trade in commonly and equitably understood amounts, and to investigate, understand, and control the chemical, physical, and biological processes of the natural world. The encyclopaedia will be of use not only to historians of science and technology, but also to economic and social historians and should be in every major academic and national library as standard reference work on the topic.

Museums of Language and the Display of Intangible Cultural Heritage presents essays by practitioners based in language museums around the world. Describing their history, mission, and modes of display, contributors demonstrate the important role intangible heritage can and should play in the museum. Arguing that languages are among our most precious forms of cultural heritage, the book also demonstrates that they are at risk of neglect, and of endangerment from globalisation and linguistic imperialism. Including case studies from across Europe, North America, Africa, and Asia, this book documents the vital work being done by museums to help preserve languages and make them objects of broad public interest. Divided into three sections, contributions to the book focus on one of three types of museums: museums of individual languages, museums of language groups – both geographic and structural – and museums of writing. The volume presents practical information alongside theoretical discussions and state-of-the-art commentaries concerning the representation of languages and their cultural nature. Museums of Language and the Display of Intangible Cultural Heritage is the first volume to address the subject of language museums and, as such, should be of interest to academics, researchers, and postgraduate students in the fields of museum and cultural heritage studies, applied linguistics, anthropology, tourism, and public education.

Today's information technology often seems to take on a life of its own, spreading into every part of our lives. In the Roman world things were different. Technologies were limited to small, scattered social groups. By examining five technologies—lists, tables, weights and measures, artistic perspective, and mapping—Mosaics of Knowledge demonstrates how the Romans broke up a world we might have imagined them to unite. That is, the recording, storage, and recall of information in physical media might be expected to bind together persons distant in time and space. More often than not, however, Roman instances serve to create or reinforce the isolation of particular groups. Persons in different "locations"—whether those are geographical, social, or occupational—had access to quite different informational resources, and the overall situation is thus not controlled by the needs of any particular class or group. On the one hand, these constraints on use in turn constrain the development and power of individual technologies. Development is slow, scattered, and far from one-directional. On the other, seeming technological weaknesses can turn out to be illusory if we set them in actual use-contexts. Romans deploy no more but also no less "computing" power than needed for very narrowly defined goals. This study combines detailed readings of a wide variety of evidence (inscriptions, small archeological finds, artworks, literary texts) with theoretical consideration of the social, cognitive, and material contexts for their use to present a unique portrait of Roman IT capabilities, limitations, and habits.
