Even though blockchain technology was originally created as a ledger system for bitcoin to operate on, using it for areas other than cryptocurrency has become increasingly popular as of late. The transparency and security provided by blockchain technology is challenging innovation in a variety of businesses and is being applied in fields that include accounting and finance, supply chain management, and education. With the ability to perform such tasks as tracking fraud and securing the distribution of medical records, this technology is key to the advancement of many industries. The

Research Anthology on Blockchain Technology in Business, Healthcare, Education, and Government is a vital reference source that examines the latest scholarly material on trends, techniques, and uses of blockchain technology applications in a variety of industries, and how this technology can further transparency and security. Highlighting a range of topics such as cryptography, smart contracts, and decentralized blockchain, this multi-volume book is ideally designed for academics, researchers, industry leaders, managers, healthcare professionals, IT consultants, engineers, programmers, practitioners, government officials, policymakers, and students.

 Highly effective negotiation skills are an

essential element of a purchasing and supply chain professional's toolkit. Negotiation for Procurement and Supply Chain Professionals provides a step-by-step approach to delivering winning negotiations and getting game-changing results. It provides purchasers and supply chain managers with the necessary tools and tactics for a detailed, planned approach to negotiation. Negotiation for Procurement and Supply Chain Professionals allows the purchasing professional or the buying team to evaluate the supplier in advance, assess the sales team, and tailor their negotiation strategy depending on concession strategies, cultural influences and game theory. Negotiation for Procurement and Supply Chain Professionals provides a strong framework for discussion in advance of the meeting, allowing the negotiator to plan their agenda, objectives

and tactics. Based upon the Red Sheet® Methodology, this book is a proven and collaborative technique used by many companies globally. The new edition includes supply chain planning, updates on multi-party negotiation for supply chain negotiations, Brexit as a retrospective example of negotiation and how the negotiation capability will need to change in the future.

Neuropsychologists are provided with little formal education and training regarding the identification and measurement of somatoform symptoms, yet these conditions are highly prevalent, with estimates indicating that 20% of general medical patients and 30% of neurologic clinic patients present with symptoms lacking medical explanation. This book provides neuropsychologists with comprehensive information and specific practice recommendations for the assessment of patients with somatoform conditions. The first four chapters discuss the genesis of somatoform and other functional somatic symptom disorders, and the next seven chapters address somatoform conditions in the context of nonepileptic seizures, multiple chemical sensitivity and other claimed toxic exposures, pseudotremor and other nonphysiologic movement disorders, postconcussion syndrome, chronic pain/fibromyalgia/complex regional pain syndrome, attention deficit disorder, and auto-immune disease. Chapters are also included that address the use of the MMPI-2-RF in differentiating somatoform disorder and malingering, medically unexplained symptoms in non-English-speaking individuals; workplace factors in somatization; and testimony involving somatoform conditions. The book is targeted for practicing neuropsychologists, clinical psychologists including those specializing in behavioral medicine, and students in training.

Sleep disorder experts discuss specific behavioral techniques, psychotherapeutic techniques and pharmacotherapy, comprehensive and integrated approaches, disorders of the sleep-wake schedule, and specific populations--the chronically ill and older adults. The field has seen rapid advances in recent years and has attained growing respectability--insomnia is now seen as something more than a manifestation of depression or simply an annoying nuisance to be extinguished with hypnotics. This book is a multi-author treatise on the most outstanding research problems in the field of the aeronomy of the Earth's atmosphere and ionosphere, encompassing the science covered by Division II of the International Association of Geomagnetism and Aeronomy (IAGA). It contains several review articles and detailed papers by leading scientists in the field. The book is organized in five parts:

1) Mesosphere-Lower Thermosphere Dynamics and Chemistry; 2) Vertical Coupling by Upward Propagating Waves; 3) Ionospheric Electrodynamics and Structuring; 4) Thermosphere- Ionosphere Coupling, Dynamics and Trends and 5) Ionosphere-Thermosphere Disturbances and Modeling. The book consolidates the progress achieved in the field in recent years and it serves as a useful reference for graduate students as well as experienced researchers.

This book is a reference for continuous improvement project (CIP) leaders/facilitators in manufacturing and service organizations, students (undergraduate and graduate), academics responsible for managing senior projects (Capstone Projects) and teaching quality courses, and researchers interested in how organizations could produce more effective and efficient continuous improvement initiatives and projects. The authors collected and analyzed information and results from CIPs they facilitated or co-advised, such as the improvement of the service level in a bottle manufacturing organization, reduction of changeover in a brewery manufacturing organization, reduction of ambulance response time, and reduction of scrap in a steel transformation manufacturing organization. Many of the CIPs were previously part of award-winning white papers documenting critical improvements. Throughout this book, readers will learn: different types of CIPs metrics to identify successful CIPs the 53 factors related to CIPs success how to manage CIPs behaviors to achieve outstanding results from CIPs. Three of the chapters are supplemented with three or more case studies. In addition, the final chapter includes a list of behaviors expected from directors, continuous improvement managers, CIP leaders/facilitators, and CIP team members to obtain the major benefits from CIPs.

The series Topics in Current Chemistry Collections presents critical reviews from the journal Topics in Current Chemistry organized in topical volumes. The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology, medicine and materials science. The goal of each thematic volume is to give the non-specialist reader, whether in academia or industry, a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience. Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data, but should rather be conceptual, concentrating on the methodological thinking that will allow the non-specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field. The chapters “Assessment of Simple Models for Molecular Simulation of Ethylene Carbonate and Propylene Carbonate as Solvents for Electrolyte Solutions” and “Elucidating Solvation Structures for Rational Design of Multivalent Electrolytes—A Review” are available open access under a CC BY 4.0 License via link.springer.com.

Underground pipelines transporting liquid petroleum products and natural gas are critical components of civil infrastructure, making corrosion prevention an essential part of asset-protection strategy.

Underground Pipeline Corrosion provides a basic understanding of the problems associated with corrosion detection and mitigation, and of the state of the art in corrosion prevention. The topics covered in part one include: basic principles for corrosion in underground pipelines, AC-induced corrosion of underground

pipelines, significance of corrosion in onshore oil and gas pipelines, numerical simulations for cathodic protection of pipelines, and use of corrosion inhibitors in managing corrosion in underground pipelines. The methods described in part two for detecting corrosion in underground pipelines include: magnetic flux leakage, close interval potential surveys (CIS/CIPS), Pearson surveys, in-line inspection, and use of both electrochemical and optical probes. While the emphasis is on pipelines transporting fossil fuels, the concepts apply as well to metallic pipes for delivery of water and other liquids. Underground Pipeline Corrosion is a comprehensive resource for corrosion, materials, chemical, petroleum, and civil engineers constructing or managing both onshore and offshore pipeline assets; professionals in steel and coating companies; and academic researchers and professors with an interest in corrosion and pipeline engineering. - Reviews the causes and considers the detection and prevention of corrosion to underground pipes - Addresses a lack of current, readily available information on the subject - Case studies demonstrate how corrosion is managed in the underground pipeline industry

In *International Intervention and the Problem of Legitimacy* Andrew C. Gilbert argues for an ethnographic analysis of international intervention as a series of encounters, focusing on the relations of difference and inequality, and the question of legitimacy that permeate such encounters. He discusses the transformations that happen in everyday engagements between intervention agents and their target populations, and also identifies key instabilities that emerge out of such engagements. Gilbert highlights the struggles, entanglements and inter-dependencies between and among foreign agents, and the people of Bosnia-Herzegovina that channel and shape intervention and how it unfolds. Drawing upon nearly two years of fieldwork studying in postwar Bosnia and Herzegovina, Gilbert's probing analysis identifies previously overlooked sites, processes, and effects of international intervention, and suggests new comparative opportunities for the study of transnational action that seeks to save and secure human lives and improve the human condition. Above all, *International Intervention and the Problem of Legitimacy* foregrounds and analyzes the open-ended, innovative, and unpredictable

nature of international intervention that is usually omitted from the ordered representations of the technocratic vision and the confident assertions of many critiques.

WINNER: ACA-Bruel 2015 - Grand Prix Businesses are going through rapid change due to an increased focus on sustainability and corporate responsibility, technological advances, geo-political and macro-economic change, and demographic shifts. If purchasing and supply chain managers are to embrace these challenges they must develop new ways of thinking about supply structures and processes as well as new skills and competencies. The Procurement Value Proposition examines these important changes that will have a profound effect on the way future procurement is carried out. It considers the implications of global economic transformation for procurement set against: changes in business contexts, purchasing strategies, organisational structure, roles and responsibilities, system development and skills required to work in the profession. This book discusses the value proposition offered by contemporary procurement to the sustainability and development of business. They examine how organizations that position procurement as a core business function will be able to drive a more competitive lever for change, and more readily adapt to the forces driving rapid change in the current global environment. The Procurement Value Proposition features case studies of companies that are moving through procurement transformation in a continual phase of movement and adaptation to the multitude of shifts that are occurring. It features input, observations and case studies from CPO's, Commercial Directors and other Procurement and business leaders. The book considers a variety of geographical contexts and highlights differences between the US, the UK and China. Awarded the Grand Prix ACA-Bruel for its important contributions to the research and practice in procurement and supply chain management, it has been recognized for its ambitious vision of procurement.

This book focuses on the need to develop sustainable supply chains - economically, environmentally and socially. This book is not about a wish list of impractical choices, but the reality of decisions faced by all those involved in supply chain

management today. Our definition of sustainable supply chains is not restricted to so-called "green" supply chains, but recognises that in order to be truly sustainable, supply chains must operate within a realistic financial structure, as well as contribute value to our society. Supply chains are not sustainable unless they are realistically funded and valued. Thus, a real definition of sustainable supply chain management must take account of all relevant economic, social and environmental issues. This book contains examples from a wide range of real-life case studies, and synthesizes the learnings from these many different situations to provide the fundamental building blocks at the centre of successful logistics and supply chain management.
