*Ion Implantation: Equipment and
Techniques* Prentice Hall

Composed over several decades, the essays here are remarkably fresh and relevant. They offer instruction for the student just beginning the study of folklore as well as repeated value for the many established scholars who continue to wrestle with issues that Wilson has

addressed. As his work has long offered insight on critical matters—nationalism, genre, belief, the relationship of folklore to other disciplines in the humanities and arts, the currency of legend, the significance of humor as a cultural expression, and so forth—so his recent writing, in its reflexive approach to narrative and storytelling, illuminates today's paradigms. Its notable autobiographical dimension, long an element of Wilson's work, employs family and local lore to draw conclusions

of more universal significance. Another way to think of it is that newer folklorists are catching up with Wilson and what he has been about for some time. As a body, Wilson's essays develop related topics and connected themes. This collection organizes them in three coherent parts. The first examines the importance of folklore—what it is and its value in various contexts. Part two, drawing especially on the experience of Finland, considers the role of folklore in national identity, including both how it helps define and sustain identity and the less savory ways it may be used for the sake of nationalistic ideology. Part three, based in large part on Wilson's extensive work in Mormon folklore, which is the most important in that area since that of Austin and Alta Fife, looks at religious

cultural expressions and outsider perceptions of them and, again, at how identity is shaped, by religious belief, experience, and participation; by the stories about them; and by the many other expressive parts of life encountered daily in a culture. Each essay is introduced by a well-known folklorist who discusses the influence of Wilson's scholarship. These include Richard Bauman, Margaret Brady, Simon Bronner, Elliott Oring, Henry Glassie, David Hufford, Michael Owen Jones, and Beverly Stoeltje.

Revue scientifique CRC Press

This book describes the historical importance of potato (*Solanum tuberosum* L.), potato genetic resources and stocks (including *S. tuberosum* group Phureja DM1-3 516 R44, a unique

doubled monoploid homozygous line) used for potato genome sequencing. It also discusses strategies and tools for high-throughput sequencing, sequence assembly, annotation, analysis, repetitive sequences and genotyping-by-sequencing approaches. Potato (*Solanum tuberosum* L.; $2n = 4x = 48$) is the fourth most important food crop of the world after rice, wheat and maize and holds great potential to ensure both food and nutritional security. It is an autotetraploid crop with complex genetics, acute inbreeding depression and a highly heterozygous nature. Further, the book examines the recent discovery of whole genome sequencing of a few wild potato species genomes, genomics in management and genetic enhancement of *Solanum* species, new

strategies towards durable potato late blight resistance, structural analysis of resistance genes, genomics resources for abiotic stress management, as well as somatic cell genetics and modern approaches in true-potato-seed technology. The complete genome sequence provides a better understanding of potato biology, underpinning evolutionary process, genetics, breeding and molecular efforts to improve various important traits involved in potato growth and development.

Études rhodaniennes CRC Press
GlobalSoilMap: Basis of the global spatial soil information system contains contributions that were presented at the 1st GlobalSoilMap conference, held 7-9 October 2013 in Orléans, France. These

contributions demonstrate the latest developments in the GlobalSoilMap project and digital soil mapping technology for which the ultimate aim is to produce a high resolution digital spatial soil information system of selected soil properties and their uncertainties for the entire world.

GlobalSoilMap: Basis of the global spatial soil information system aims to stimulate capacity building and new incentives to develop full GlobalSoilMap products in all parts of the world.

Beach Management Tools - Concepts, Methodologies and Case Studies

Springer

The general interest and attention paid to the use of the renewable natural resources of the world have increased greatly during the last decades. This is

due to the environmental dilemma into which mankind has got itself by the total disregard of ecological facts and laws, the underpricing of natural resources and the overemphasis on economic development, coupled with unimpeded rapid population growth and the preponderance of materialistic consumption-oriented attitudes. The management and use of natural resources such as forests, grasslands, rivers and lakes were formerly considered purely in a financial context, whereas latterly, a consciousness of their social function and the indirect economic benefits which can be derived from them has developed. Thus, as regards these traditional resources, multi-use concepts comprising economically oriented utilisation as well as

recreational, educational and social use have become widely accepted.

Conservation of natural resources for sustainable consumptive as well as non-consumptive uses has been recognised as a key element for maintaining economic development all over the world. Fortunately, the industrialised countries have started to apply this principle themselves and in their technical and financial aid to the developing Third World countries. This is manifest from policy documents such as the World Bank Policy on Development of Wild Lands, issued in 1987.

Ergonomic Models of Anthropometry, Human Biomechanics, and Operator-equipment Interfaces Springer Science & Business Media

The objective of this book is to assist

scientists and engineers select the ideal material or manufacturing process for particular applications; these could cover a wide range of fields, from light-weight structures to electronic hardware. The book will help in problem solving as it also presents more than 100 case studies and failure investigations from the space sector that can, by analogy, be applied to other industries. Difficult-to-find material data is included for reference. The sciences of metallic (primarily) and organic materials presented throughout the book demonstrate how they can be applied as an integral part of spacecraft product assurance schemes, which involve quality, material and processes evaluations, and the selection of mechanical and component parts. In this

successor edition, which has been revised and updated, engineering problems associated with critical spacecraft hardware and the space environment are highlighted by over 500 illustrations including micrographs and fractographs. Space hardware captured by astronauts and returned to Earth from long durations in space are examined. Information detailed in the Handbook is applicable to general terrestrial applications including consumer electronics as well as high reliability systems associated with aeronautics, medical equipment and ground transportation. This Handbook is also directed to those involved in maximizing the reliability of new materials and processes for space technology and space engineering. It will be invaluable

to engineers concerned with the construction of advanced structures or mechanical and electronic sub-systems.

Bulletin signalétique Routledge

Discusses the role of small towns as agents for rural improvement and focuses on the links provided by small towns to both rural areas and larger towns. Reviews the role of selected indigenous nongovernmental organizations (NGOs) in supporting the activities of small enterprises in small towns and rural areas. Covers trends from the 1960s.

Revue de cosmobiologie Springer Science & Business Media

This book reports on cutting-edge theories and methods for analyzing complex systems, such as transportation and communication networks and

discusses multi-disciplinary approaches to dependability problems encountered when dealing with complex systems in practice. The book presents the most noteworthy methods and results discussed at the International Conference on Reliability and Statistics in Transportation and Communication (RelStat), which took place in Riga, Latvia on October 17 - 20, 2018. It spans a broad spectrum of topics, from mathematical models and design methodologies, to software engineering, data security and financial issues, as well as practical problems in technical systems, such as transportation and telecommunications, and in engineering education.

Democratising the Museum Springer
Expanding water reuse-the use of

treated wastewater for beneficial purposes including irrigation, industrial uses, and drinking water augmentation could significantly increase the nation's total available water resources. Water Reuse presents a portfolio of treatment options available to mitigate water quality issues in reclaimed water along with new analysis suggesting that the risk of exposure to certain microbial and chemical contaminants from drinking reclaimed water does not appear to be any higher than the risk experienced in at least some current drinking water treatment systems, and may be orders of magnitude lower. This report recommends adjustments to the federal regulatory framework that could enhance public health protection for both planned and unplanned (or de

facto) reuse and increase public confidence in water reuse.

Democratising the museum is a collection of articles about participation intended for academics and professionals. Democratic museum shares power with the visitors while negotiating the concept of professionalism. In this book the idea of participatory technologies is extended to modes of participation using online and offline technologies.

Do the movements of animals, including humans, follow patterns that can be described quantitatively by simple laws of motion? If so, then why? These questions have attracted the attention of

scientists in many disciplines, and stimulated debates ranging from ecological matters to queries such as 'how can there be free will if one follows a law of motion?' This is the first book on this rapidly evolving subject, introducing random searches and foraging in a way that can be understood by readers without a previous background on the subject. It reviews theory as well as experiment, addresses open problems and perspectives, and discusses applications ranging from the colonization of Madagascar by Austronesians to the diffusion of genetically modified crops. The book will interest physicists working in the field of anomalous diffusion and movement ecology as well as ecologists already familiar with the concepts and methods

of statistical physics.

Bibliographie des sciences géologiques

Internationaler Verlag Der
Wissenschaften

The book illuminates the educational potential of nuclear tourism that becomes a site of outdoor and place-based education, promotes STEM, energy literacy, critical thinking, and environmental skills.

Proceedings of the 1996 World Congress on Coastal and Marine Tourism Springer

Integrates the information necessary to conceptualize, select, mate and match, build, and interface microcomputer systems to most applications.

Materials and Processes Springer
Science & Business Media

This book provides an overview of beach management tools, including carrying capacity, beach nourishment, environmental and tourism awards (like Blue Flag or others), bathing water quality, zoning, beach typologies, quality index, user's perception, interdisciplinary beach monitoring, coastal legislation, shore protection, social and economic indicators, ecosystem services, and coastal governance (applied in beach case studies). Beaches are one of the most intensely used coastal ecosystems and are responsible for more than half of all global tourism revenues, and as such the book introduces a wide range of state-of-the-art tools that can be used to deal with a variety of beach challenges. Each chapter features specific types of tools that can be applied to advantage in

beach management practices. With examples of local and regional case studies from around the globe, this is a valuable resource for anyone involved in beach management.

The Marrow of Human Experience
Springer

The Fourth International Conference on Ion Implantation: Equipment and Techniques was held at the Convention Center in Berchtesgaden, Bavaria, Germany, from September 13 to 17, 1982. It was attended by more than 200 participants from over 20 different countries. Several series of conferences have dealt with the application of ion implantation to semiconductors and other materials (Thousand Oaks, 1970; Garmisch-Partenkirchen, 1971; Osaka, 1974; Warwick, 1975; Boulder, 1975;

Budapest, 1978; and Albany, 1980). Another series of conferences has been devoted to implantation equipment and techniques (Sford, 1977; Trento, 1978; and Kingston, 1980). This conference was the fourth in the latter series. Twelve invited papers and 55 contributed papers covered the areas of ion implantation equipment, measuring techniques, and applications of implantation to metals and semiconductors. A school on ion implantation was held in connection with the conference, and the lectures presented at this school were published as Vol. 10 of the Springer Series in Electrophysics under the title Ion Implantation Techniques (edited by H. Rysse1 and H. Glawischnig). During the conference, space was also provided for

presentations and demonstrations by manufacturers of ion implantation equipment. Once again, this conference provided a forum for free discussion among implantation specialists in industry as well as research institutions. Especially effective in stimulating a free exchange of information was the daily get-together over free beer at the "Bier Adam". Many people contributed to the success of this conference.
