 For the first time, the social problem of untouchability, which is peculiar to India, is being studied mathematically. We have used Fuzzy Cognitive Maps and Neutrosophic Cognitive Maps to analyze the views of the revolutionary Periyar E. V. Ramasamy (17.09.1879-24.12.1973) who relentlessly worked for more than five decades to secure the rights of the oppressed people who were considered untouchables. This thought-provoking book will be of great interest to human rights activists, socio-scientists, historians, and above all, mathematicians. From UNESCO citation: Periyar, The Prophet of the New Age, The Socrates of South East Asia, Father of the Social reform Movement and Arch Enemy of Ignorance, Superstition, Meaningless Customs and Baseless Manners.

 This book presents five critical dimensions on relationships, institutions, production, organisation, and governance from design and systems perspectives for the systematic transition of unstable and vulnerable communities across the world to sustainable community systems. • The first section discusses features of relationships and processes to deep cooperation and trust within a community. • The second section examines institutions within and outside a district to foster synergy across institutions within a district and to minimise negative externalities on local communities within a district. • The third section deals with food production systems that are nature-friendly, resilient, efficient and sustainable. • The fourth section discusses the design of producer organisations that can graduate to become sustainable community enterprise systems. • The fifth section focuses on community governance that can facilitate decentralised, participatory, transparent and democratic local governance systems. This book offers a fresh perspective on design thinking for optimising internal design consistencies. • provides a systems perspective on building sustainable community systems at the lowest governance unit in different countries, such as Ward/Gram Panchayat/Panchayat Council/Gewong/Union Council/GN. • gives insights into design & systems perspectives towards building sustainable community systems within a district of any country across the world.
U.G.C.-NET/JRF/SET Teaching & Research Aptitude (General Paper-1) Orient Blackswan
 Despite India's record of rapid economic growth and poverty reduction over recent decades, rising inequality in the country has been a subject of concern among policy makers, academics, and activists alike. Poverty and Social Exclusion in India focuses on social exclusion, which has its roots in India's historical divisions along lines of caste, tribe, and the excluded sex, that is, women. These inequalities are more structural in nature and have kept entire groups trapped, unable to take advantage of

opportunities that economic growth offers. Culturally rooted systems perpetuate inequality, and, rather than a culture of poverty that afflicts disadvantaged groups, it is, in fact, these inequality traps that prevent these groups from breaking out. Combining rigorous quantitative research with a discussion of these underlying processes, this book finds that exclusion can be explained by inequality in opportunities, inequality in access to markets, and inequality in voice and agency. This report will be of interest to policy makers, development practitioners, social scientists, and academics working to foster equality in India.
Governance in Developing Asia Springer Nature
 This book presents quality technical papers representing the recent developments in the field of hydrological modeling, water management and water governance including practical applications. The content covers multifarious aspects of hydrology and water resources. It includes an application of the Hydrologic Modelling System (HEC-HMS) which has been successfully demonstrated for assessment of floods. The authors suggest an approach for the mitigation of cyclone disaster through a case study of the Phailin cyclone, whilst considering mitigating pluvial flooding, developing suitable management strategies. The book includes chapters discussing the detrended fluctuation analysis which is carried out for multifractal description of droughts. Drought characteristics are analyzed, and drought indices evolved for drought preparedness/management. The use of science in community planning under changing climate is also studied and discussed. The authors present an experimental study wherein hydraulic coefficients are calibrated by using vertical orifice. A cross flow hybrid hydrokinetic turbine is also evaluated for performance, and high head regulating radial gate designed and studied its sensitivity. This book will appeal to researchers, field practitioners, NGO and other Governmental as well as private water practitioners
Broken People Oxford University Press, USA
 The Grip of Change is the English translation of Pazhaiyana Kazhithalum, the first full-length novel by P. Sivakami, an important Tamil writer. This translation also features Asiriyar Kurippu, the sequel in which Sivakami revisits her work. The protagonist of Book 1, Kathamuthu, is a charismatic Parayar leader. He intervenes on behalf of a Parayar woman, Thangam, beaten up by the relatives of her upper caste lover. Kathamuthu works the state machinery and the village caste hierarchy to achieve some sort of justice for Thangam. The first Tamil novel by a Dalit woman, Pazhaiyana Kazhithalum, went beyond condemning caste fanatics. Sivakami is critical of the Dalit movement and Dalit patriarchy, and yet does not become a caste traitor because of her participation in the search for solutions. The novel became an expression of Dalit youth eager and working for change. In Book 2, Author's Note, Kathamuthu's daughter Gowri, the author of Book 1, traces the circumstances and events of her novel. The result is a fascinating exploration of the disjunctures between what happens in the author's family and community, and her fictional interpretations of those happenings. The Series:

The books in the Literature in Translation series are translations of significant literature from Indian languages. The books in the Dalit Studies series deal with Dalit life and thought.
Seventh All India School Education Survey (7th AISES) University of Illinois Press
 This text deals with issues that affect all education majors. Each chapter is written by an expert in his/her specific field of inclusion or special education. The range and coverage of the text is very broad, including issues such as funding, assessment and reasons behind inclusion. There are specific mainstreaming strategies for moderately to severely disabled students of all ages.
She Called My Name Springer
 Using Delhi's contemporary history as a site for reflection, Pirate Modernity moves from a detailed discussion of the technocratic design of the city by US planners in the 1950s, to the massive expansions after 1977, culminating in the urban crisis of the 1990s. As a practice, pirate modernity is an illicit form of urban globalization. Poorer urban populations increasingly inhabit non-legal spheres: unauthorized neighborhoods, squatter camps and bypass legal technological infrastructures (media, electricity). This pirate culture produces a significant enabling resource for subaltern populations unable to enter the legal city. Equally, this is an unstable world, bringing subaltern populations into the harsh glare of permanent technological visibility, and attacks by urban elites, courts and visceral media industries. The book examines contemporary Delhi from some of these sites: the unmaking of the city's modernist planning design, new technological urban networks that bypass states and corporations, and the tragic experience of the road accident terrifyingly enhanced by technological culture. Pirate Modernity moves between past and present, along with debates in Asia, Africa and Latin America on urbanism, media culture, and everyday life. This pioneering book suggests cities have to be revisited afresh after proliferating media culture. Pirate Modernity boldly draws from urban and cultural theory to open a new agenda for a world after media urbanism.

 Every year, the World Bank's World Development Report (WDR) features a topic of central importance to global development. The 2018 WDR—LEARNING to Realize Education's Promise—is the first ever devoted entirely to education. And the time is right: education has long been critical to human welfare, but it is even

more so in a time of rapid economic and social change. The best way to equip children and youth for the future is to make their learning the center of all efforts to promote education. The 2018 WDR explores four main themes: First, education's promise: education is a powerful instrument for eradicating poverty and promoting shared prosperity, but fulfilling its potential requires better policies—both within and outside the education system. Second, the need to shine a light on learning: despite gains in access to education, recent learning assessments reveal that many young people around the world, especially those who are poor or marginalized, are leaving school unequipped with even the foundational skills they need for life. At the same time, internationally comparable learning assessments show that skills in many middle-income countries lag far behind what those countries aspire to. And too often these shortcomings are hidden—so as a first step to tackling this learning crisis, it is essential to shine a light on it by assessing student learning better. Third, how to make schools work for all learners: research on areas such as brain science, pedagogical innovations, and school management has identified interventions that promote learning by ensuring that learners are prepared, teachers are both skilled and motivated, and other inputs support the teacher-learner relationship. Fourth, how to make systems work for learning: achieving learning throughout an education system requires more than just scaling up effective interventions. Countries must also overcome technical and political barriers by deploying salient metrics for mobilizing actors and tracking progress, building coalitions for learning, and taking an adaptive approach to reform.

This book offers a transdisciplinary perspective on the concept of "smart villages" Written by an authoritative group of scholars, it discusses various aspects that are essential to fostering the development of successful smart villages. Presenting cutting-edge technologies, such as big data and the Internet-of-Things, and showing how they have been successfully applied to promote rural development, it also addresses important policy and sustainability issues. As such, this book offers a timely snapshot of the state-of-the-art in smart village research and practice.

This electronic version has been made available under a Creative Commons (BY-NC-ND) open access license. Knowledge, democracy and action: Community-university research partnerships in global perspectives is based on a three-year international comparative study undertaken by the Global Alliance on Community Based Research and supported by the UNESCO Chair in Community Based Research and Social Responsibility in Higher Education. It provides evidence from twenty case studies around the world on the power and potential of community and higher education based scholars and activists working together in the co-creation of transformative knowledge. The book draws on the experience and insights of thirty-seven scholars and practitioners from the Global South and North. Opening with a theoretical overview of knowledge, democracy and action, the book is followed by analytical chapters providing lessons learned and capacity building in the north and the south, on the theory and practice of community university research partnerships, models of evaluation, approaches to measuring the impact and an agenda for future research and policy recommendations.

A Book That Studies The Confrontation Between India S Caste System And The Parliamentary Form Of Government In Varying Contexts And Through Different Methods Of Investigation.

Transition Strategies for Sustainable Community Systems Cambridge University Press

This book emphasizes the need for experimenting with more deliberate and rigorous policy processes to attain balanced regional development, which can promote both equity and efficiency in India's development discourse. The institutional mechanisms for dealing with regional imbalance in India have not been very successful so far. With rising discrepancies in development, demand for autonomy continues along with a new dimension of regionalism arising from submerged identity along with political and economic aspirations, which demanded new channels for solution. So far, attempts to create space for autonomy have possibly not optimally accommodated the conceptual mechanisms like equity and democratic process. Thus democratizing policy process using six pillars of voice: knowledge, objective, fundamental values, implementation framework and public awareness can ensure a better policy outcome for dealing with the persistent challenges of regional disparity in India. This book further focuses on the need for democratizing the policy process for regional development through discussion and inclusion. Such a transition needs innovation in policy regime, which can be attained through following six pillars (i) Democratic voice of stakeholders in policy development and implementation; (ii) Clear policy objectives that advance the common good, based on voice; (iii) Unbiased, sound and comprehensive knowledge and data bases. (iv) Consistency with constitutional values; (v) A sound implementation framework ensuring user-friendliness, transparency and rationality of decision-making processes, effective grievance redress, clear accountability and independent evaluation; (vi) Public awareness and support of policies with relevant and public participation in implementation.
