Penelitian menjadi salah satu kunci
keberhasilan sebuah bangsa sehingga
penelitian adalah tuntutan bagi peneliti,
baik mahasiswa, dosen, maupun profesi
lainnya. Sebelum proposal penelitian
disusun, peneliti wajib memahami tentang
topik yang akan diteliti atau masalah yang
diangkat dalam penelitian. Pemahaman
tersebut sangat penting sebagai dasar
dalam mengembangkan proposal
penelitian sehingga pelaksanaan

penelitian dapat berjalan dengan baik. Sering kali peneliti, terutama mahasiswa kebingungan dalam mencari sumber teori maupun konsep tentang topik atau masalah yang diangkat dalam penelitian. Selain itu, hal lain yang sering kali menyulitkan mahasiswa atau peneliti adalah cara mengukur variabel dan instrumen penelitian yang akan digunakan dalam penelitian. Oleh karena itu, penulis sangat mempertimbangkan semua hal tersebut dengan menyusun buku ini, yang dilengkapi dengan topik-topik yang banyak diangkat oleh mahasiswa atau peneliti dalam melakukan penelitian, baik bidang kesehatan maupun sosial. Harapannya, kehadiran buku ini dapat membantu mahasiswa maupun peneliti dalam menyusun proposal penelitian. Buku ini banyak mengulas tentang konsep, pengukuran variabel, dan contoh-contoh kuesioner dan variabel penelitian yang terangkum dalam 13 bab, yaitu: Bab I Konsep Pengetahuan Bab II Konsep Sikap Bab II Konsep Perilaku Bab IV Konsep Persepsi Bab V Konsep Stres Bab VI Konsep Kecemasan Bab VII Konsep Nyeri Bab VIII Konsep Dukungan Sosial Bab IX Konsep Kepatuhan Bab X Konsep Motivasi

Fundamental Concepts and Skills for Nursing + Mosby's Nursing Video Skills: Student Online Version 3.0 Springer Publishing Company

Nature aside, the world in which we live should be designed for us, from everyday products like scissors and chairs to complex systems in avionics, medicine and nuclear power applications. Now more than ever, technological advances continue to increase the range and complexity of tasks that people have to perform. As a discipline, human factors psychology (ergonomics) therefore has an increasingly important role to play in

ensuring that the human user's physical characteristics, cognitive abilities and social needs are taken into account in the development, implementation and operation of products and systems. In this book, Jan Noyes provides a comprehensive and up-to-date overview of human-machine interaction and the design of environments at work. Focusing on topics relevant to user-centred design, she includes coverage of the capabilities and limitations of humans, human-machine interactions, work environments, and organizational issues. Health and safety issues underpin a large amount of work on the human factors of design, and these are addressed fully throughout the book. Each chapter includes case studies that demonstrate the real-world relevance of the points being made and concludes with a list of key points. Although aimed primarily at advanced undergraduates, postgraduates and researchers in organizational and occupational psychology, this book will also be of relevance to students on engineering, computing and applied psychology/human factors programmes.

Focusing on spirituality as an inherent component of effective nursing care, this text presents an unbiased view of the nature of human spirituality apart from religion. The text offers a unique interdisciplinary and inter-religious perspective—representing a range of Eastern and Western religious traditions—while addressing lifespan considerations and belief systems within the nursing process framework. Readable, interactive chapters apply the content clinically and highlight timely research on spirituality and health. Each chapter includes case studies, critical thinking questions, and personal reflection questions. Website references are also included.

Winner of an AJN Book of the Year Award for 2009! "[This] book offers a coherent, theoretical, and research-guided framework for quality nursing caring in practice, education, and leadership; a foundational, timeless, yet transformative framework of substance." Dedicated time spent with patients and families in clinical settings is often limited, rushed, and impersonal. How can nurses develop more positive, caring relationships with their patients, and help to improve the quality of patient care at large? This book addresses this critical question by presenting Joanne R. Duffy's Quality-Caring Model©-the result of 35 years of clinical experience and educational acumen. This values-based model will bring caring back into the foreground of nursing practice by providing revised curricula for educational programs, and outlining the core caring principles for nurse administrators. Key Features: Establishes "Relationship-Centered Caring," with discussions on how to care for the self, patients and families, each other, and communities Offers multiple case examples, and includes reflective questions and applications for use in educational programs, workshops, conferences, and clinical practice Demonstrates how the Quality-Caring Model© can be implemented in clinical practice, nursing education, research, and nursing leadership settings Includes appendices that discuss how caring can

improve patient safety, outline course objectives, and explain how to assess and measure caring in your facility. Written in clear, accessible language, this book will be an invaluable resource to nursing students, nursing scholars, clinical nurses, nurse educators, nurse researchers, and nurse leaders. Duffy's approach will help create a redesigned patient care delivery system focused on the primacy of caring relationships.

Psychological interest in religion, in terms of both theory and empirical research, has been constant since the beginning of psychology. However, since the beginning of the 21st Century, partially due to important social and political events and developments, interest in religion within personality and social psychology has increased. This volume reviews the accumulated research and theory on the major aspects of personality and social psychology as applied to religion. It provides a high quality integrative, systematic, and rigorous review of that work, with a focus on topics that are both

central in personality and social psychology and have allowed for the accumulation of solid and replicated and not impressionist knowledge on religion. The contributors are renowned researchers in the field who offer an international perspective that is both illuminating, yet neutral, with respect to religion. The volume's primary audience are academics, researchers, and advanced students in social psychology, but it will also interest those in sociology, political sciences, and anthropology.

The Living Elephants is the authoritative resource for information on both Asian and African elephants. From the ancient origins of the proboscideans to the present-day crisis of the living elephants, this volume synthesizes the behavior, ecology and conservation of elephants, while covering also the history of human interactions with elephants, all within the theoretical framework of evolutionary biology. The book begins with a survey of the 60-million

year evolutionary history of the proboscideans emphasizing the role of climate and vegetation change in giving rise to a bewildering array of species, but also discussing the possible role of humans in the late Pleistocene extinction of mastodonts and mammoths. The latest information on the molecular genetics of African and Asian elephants and its taxonomic implications are then presented. The rise of the elephant culture in Asia, and its early demise in Africa are traced along with an original interpretation of this unique animal-human relationship. The book then moves on to the social life of elephants as it relates to reproductive strategies of males and females, development of behavior in young, communication, ranging patterns, and societal organization. The foraging strategies of elephants, their impact on the vegetation and landscape are then discussed. The dynamics of elephant populations in relation to hunting for ivory and their population viability are described with the aid of mathematical models. A detailed account of elephant-human interactions includes a treatment of crop depredation by elephants in relation to

their natural ecology, manslaughter by elephants, habitat manipulation by humans, and a history of the ivory trade and poaching in the two continents. The ecological information is brought together in the final chapter to formulate a set of pragmatic recommendations for the long-term conservation of elephants. The broadest treatment of the subject yet undertaken, by one of the leading workers in the field, Raman Sukumar, the book promises to bring the understanding of elephants to a new level. It should be of interest not only to biologists but also a broader audience including field ecologists, wildlife administrators, historians, conservationists and all those interested in elephants and their future. *Guide to the Code of Ethics for Nurses with Interpretive Statements* Pearson

Neonatal Pain Elsevier Health Sciences The WHO Guidelines on Hand Hygiene in Health Care provide health-care workers (HCWs), hospital administrators and health authorities with a thorough review of evidence on hand hygiene in health care and specific recommendations to improve practices and reduce transmission of pathogenic microorganisms to patients and HCWs. The present Guidelines are intended to be implemented in any situation in which health care is delivered either to a patient or to a specific group in a population. Therefore, this concept applies to all settings where health care is permanently or occasionally performed, such as home care by birth attendants. Definitions of health-care settings are proposed in Appendix 1. These Guidelines

and the associated WHO Multimodal Hand Hygiene Improvement Strategy and an Implementation Toolkit (<http://www.who.int/gpsc/en/>) are designed to offer health-care facilities in Member States a conceptual framework and practical tools for the application of recommendations in practice at the bedside. While ensuring consistency with the Guidelines recommendations, individual adaptation according to local regulations, settings, needs, and resources is desirable. This extensive review includes in one document sufficient technical information to support training materials and help plan implementation strategies.
