For more than two thousand years, Ethiopia's ox-plow agricultural system

was the most efficient and innovative in Africa, but has been afflicted in the recent past by a series of crises: famine, declining productivity, and losses in biodiversity. James C. McCann analyzes the last two hundred years of agricultural history in Ethiopia to determine whether the ox-plow agricultural system has adapted to population growth, new crops, and the challenges of a modern political economy based in urban centers. This agricultural history is set in the context of the larger environmental and landscape history of Ethiopia, showing how farmers have integrated crops, tools, and labor with natural cycles of rainfall and soil fertility, as well as

with the social vagaries of changing political systems. McCann traces characteristic features of Ethiopian farming, such as the single-tine scratch plow, which has retained a remarkably consistent design over two millennia, and a crop repertoire that is among the most genetically diverse in the world. *People of the Plow* provides detailed documentation of Ethiopian agricultural practices since the early nineteenth century by examining travel narratives, early agricultural surveys, photographs and engravings, modern farming systems research, and the testimony of farmers themselves, collected during McCann's five years of fieldwork. He

then traces the ways those practices have evolved in the twentieth century in response to population growth, urban markets, and the presence of new technologies. *Official (ISC)2 Guide to the CISSP CBK* CIFOR Seven Deadliest Wireless Technologies Attacks provides a comprehensive view of the seven different attacks against popular wireless protocols and systems. This book pinpoints the most dangerous hacks and exploits specific to wireless technologies, laying out the anatomy of these attacks, including how to make your system more secure. You will discover the best ways to defend against these vicious hacks with step-by-step instruction and learn

techniques to make your computer and network impenetrable. Each chapter includes an example real attack scenario, an analysis of the attack, and methods for mitigating the attack. Common themes will emerge throughout the book, but each wireless technology has its own unique quirks that make it useful to attackers in different ways, making understanding all of them important to overall security as rarely is just one wireless technology in use at a home or office. The book contains seven chapters that cover the following: infrastructure attacks, client attacks, Bluetooth attacks, RFID attacks; and attacks on analog wireless

devices, cell phones, PDAs, and other hybrid devices. A chapter deals with the problem of bad encryption. It demonstrates how something that was supposed to protect communications can end up providing less security than advertised. This book is intended for information security professionals of all levels, as well as wireless device developers and recreational hackers. Attacks detailed in this book include: 802.11 Wireless—Infrastructure Attacks 802.11 Wireless—Client Attacks Bluetooth Attacks RFID Attacks Analog Wireless Device Attacks Bad Encryption Attacks on Cell Phones, PDAs and Other Hybrid Devices Partnership for

This book provides detailed evidence from everything Jesus prophesied, often broken down to the root definitions of terms from the Greek and Aramaic/Hebrew languages which manuscripts were written in, to show in context by numerous Bible records, how and why those called, Ti (Tee) and Do (Doe) were the new incarnations of the One referred to as the Father and before then, Jehovah and Elohim, with the One who was incarnate in the vehicle (body) named Jesus, and

before then Elijah, Moses, Enoch and Adam, who with Their Crew of Student "Saints," were on earth again to fulfill the promised return of Their Kingdom during these "End Times," through Their task recorded as the "Two Witnesses" in the Book of Revelations, that was completed when they exited their incarnations in March of 1997 - seen in the world's news as Heaven's Gate. Ti and Do left extensive records of everything they came to awaken to know over their combined 25 years incarnate. As I spent 19 fully dedicated years with them I drew upon their records and my experience to describe many new translations of terms and new

interpretations of most all Book of Revelations records. Finally, I studied world history and current events that can be shown to be valid reference points in many prophecies. This includes many unusual events NASA has photographed in outer space as Jesus prophesied; a cityscape of Lights on dwarf planet Ceres, earth-like qualities to dwarf planet Pluto, hexagon shaped top on Saturn, spire like towers on the Moon, complicated objects that resemble Star Trek's star-ship enterprise in the sun's corona, comets that are comprised of several to seven objects flying in V formation, or having companion objects with them and parts of UFO and Luciferian

This new Handbook offers a wide-ranging overview of current scholarship on the Cold War, with essays from many leading scholars. The field of Cold War history has consistently been one of the most vibrant in the field of international studies. Recent scholarship has added to our understanding of familiar Cold War events, such as the Korean War, the Cuban Missile Crisis and superpower détente, and shed new light on the importance of ideology, race, modernization, and transnational movements. The Routledge Handbook of the Cold War draws on the wealth of new Cold War scholarship, bringing together essays on a diverse range of topics such as

geopolitics, military power and technology and strategy. The chapters also address the importance of non-state actors, such as scientists, human rights activists and the Catholic Church, and examine the importance of development, foreign aid and overseas assistance. The volume is organised into nine parts: Part I: The Early Cold War Part II: Cracks in the Bloc Part III: Decolonization, Imperialism and its Consequences Part IV: The Cold War in the Third World Part V: The Era of Detente Part VI: Human Rights and Non-State Actors Part VII: Nuclear Weapons, Technology and Intelligence Part VIII: Psychological Warfare, Propaganda and Cold War Culture Part IX:

Pluralism is a political belief that acknowledges individuals' rights to pursue their interests, but requires society to resolve differences where they infringe upon each other. This guide shows how pluralism helps people to value social differences and provides clear principles and rules about how to coordinate those differences. The guide reviews pluralism's origins, key elements and strengths and weaknesses. It examines how people think about differences, including the psychological

obstacles that cause us to exclude or ignore others. Practices are examined with examples drawn from forest-related contexts: legal pluralism, multistakeholder processes and diversity in work teams. Questions are provided to help the reader assess and practice pluralism in their own settings. The guide concludes that understanding the political assumptions and principles of pluralism can enrich our understanding of current practices to develop fundamentally new approaches to forest decision-making.

Local interstitial radiation therapy of intrinsic and inaccessible brain tumors is confronted with two major problems: 1. The tolerance of normal brain tissue, which is usually involved in local tumor irradiation, i.e. perifocal white matter edema and demyelinating effects, is crucial. 2. Data on radiation effects of

implanted radioactive sources on neoplastic tissue, i.e. data on the radiosensitivity and on the biology of tumors, are still widely unavailable. In clinical practice the dose with which to achieve a given volume of tumor necrosis is roughly estimated. This report deals with the experimental findings of Iodine-125 and Iridium-192 permanent implants in healthy and neoplastic brain tissue. Our own experimental findings are correlated with experimental data on Yttrium-90 irradiation from the literature. The study is directed to collect data on the tolerance non-tumoral brain tissue and to attempt to establish a dose-response relationship. Morphologic Changes in the Dog Brain

Following Interstitial Iodine-125 Irradiation Iodine-125 seeds (manufactured by 3 M Company, St. Paul, M. N.) with an activity of 3.55 mCi were permanently implanted under stereotactic conditions into the subcortical white matter of the gyrus coronalis of the left hemisphere in 6 beagle dogs. One animal with

a non-radioactive seed implanted under similar operative conditions served as a control. The animals were allowed to survive 25, 46, 71, 94, 248, 368 days, respectively, after the implantation. The control animal survived 46 days. A detailed description of the experimental procedure is given elsewhere 16. 17.
