A Bridge between Conceptual Frameworks American Bar Association
 This book collects ECM research from the academic discipline of Information Systems and related fields to support academics and practitioners who are interested in understanding the design, use and impact of ECM systems. It also provides a valuable resource for students and lecturers in the field. "Enterprise content management in Information Systems research - Foundations, methods and cases" consolidates our current knowledge on how today's organizations can manage their digital information assets. The business challenges related to organizational information management include reducing search times, maintaining information quality, and complying with reporting obligations and standards. Many of these challenges are well-known in information management, but because of the vast quantities of information being generated today, they are more difficult to deal with than ever. Many companies use the term

"enterprise content management" (ECM) to refer to the management of all forms of information, especially unstructured information. While ECM systems promise to increase and maintain information quality, to streamline content-related business processes, and to track the lifecycle of information, their implementation poses several questions and challenges: Which content objects should be put under the control of the ECM system? Which processes are affected by the implementation? How should outdated technology be replaced? Research is challenged to support practitioners in answering these questions. *Creating Theoretical Research Frameworks using Multiple Methods* IGI Global
 As occupational therapy celebrates its centennial in 2017, attention returns to the profession's founding belief in the value of therapeutic occupations as a way to remediate illness and maintain health. The founders emphasized the importance of establishing a therapeutic relationship with each client and designing an intervention plan based on the knowledge about a client's context and environment, values, goals, and needs. Using today's lexicon, the profession's founders proposed a vision for

the profession that was occupation based, client centered, and evidence based--the vision articulated in the third edition of the Occupational Therapy Practice Framework: Domain and Process. The Framework is a must-have official document from the American Occupational Therapy Association. Intended for occupational therapy practitioners and students, other health care professionals, educators, researchers, payers, and consumers, the Framework summarizes the interrelated constructs that describe occupational therapy practice. In addition to the creation of a new preface to set the tone for the work, this new edition includes the following highlights: a redefinition of the overarching statement describing occupational therapy's domain; a new definition of clients that includes persons, groups, and populations; further delineation of the profession's relationship to organizations; inclusion of activity demands as part of the process; and even more up-to-date analysis and guidance for today's occupational therapy practitioners. Achieving health, well-being, and participation in life through engagement in occupation is the overarching statement that describes the domain and process of occupational therapy in the fullest sense. The Framework can provide the structure and guidance that practitioners can use to meet this important goal.

The 2007-09 international financial crisis underscored the importance of reliable and timely statistics on the general government and public sectors. Government finance statistics are a basis for fiscal analysis and they play a vital role in developing and monitoring sound fiscal programs and in conducting surveillance of economic policies. The Government Finance Statistics Manual 2014 represents a major step forward in clarifying the standards for compiling and presenting fiscal statistics and strengthens the worldwide effort to improve public sector reporting and transparency.

Historians have not convincingly explained modern capitalism's two major economic crises, the Great Depression of the 1930s, and the Global Financial Crisis (GFC) of 2008-2009. Accounting for Crises offers a new explanation, why both began and were more severe in the USA ('America'), based on an accounting interpretation of Marx's theory of crises. It explains their origins in capitalists' control of accumulation, which reveals important overlooked roles for Irving Fisher's accounting theory. This theory, by allowing discretion in accounts, in the context of falling rates of profit, encouraged 'swindling', overstating reported profits, and understating their risk, which facilitated and aggravated both crises. Framed by Fisher's theory, during the 1920s American accounting theorists justified discretion, which Creating the 'Big Mess' (the companion volume) concluded it management used to conservatively smooth earnings. Accounting for Crises shows that Fisher's theory, also underlays the popular new theory of investment that justified valuing shares using reported earnings, which encouraged their manipulation and legitimized 'speculation'. This, it argues, underlays America's exceptional late-1920s stock market boom, the 1929 Great Crash, and the depth and length of its Great Depression. Prominently associated with the boom, Fisher became unpopular after the crash, his name disappearing from public debate. Nevertheless, the book concludes, his theory hindered economic recovery, weakened 1930s reforms, undermined accounting regulation from the late-1930s, and following his rehabilitation from the late-1950s, underlies the Financial Accounting Standards Board's conceptual framework, which by allowing off-balance-sheet accounting for securitization-SPEs, fostered the 2007 'credit crunch' that triggered the

2008-2009 Global Financial Crisis (GFC).

Religion is a major subfield of ancient history and classical studies, and Roman religion in particular is usually studied today by experts in two rather distinct halves: the religion of the Roman Republic, covering the fifth through first centuries B.C.; and the religious diversity of the Roman Empire, spanning the first four centuries of our era. In *Time in Roman Religion*, author Gary Forsythe examines both the religious history of the Republic and the religious history of the Empire. These six studies are unified by the important role played by various concepts of time in Roman religious thought and practice. Previous modern studies of early Roman religion in Republican times have discussed how the placement of religious ceremonies in the calendar was determined by their relevance to agricultural or military patterns of early Roman life, but modern scholars have failed to recognize that many aspects of Roman religious thought and behavior in later times were also preconditioned or even substantially influenced by concepts of time basic to earlier Roman religious history. This book is not a comprehensive survey of all major aspects of Roman religious history spanning one thousand years. Rather, it is a collection of six studies that are bound together by a single analytical theme: namely, time. Yet, in the process of delving into these six different topics the study surveys a large portion of Roman religious history in a representative fashion, from earliest times to the end of the ancient world and the triumph of Christianity.

This is the second edition of *EU Criminal Law*, which has become since its publication in 2009 a key point of reference in the field. The second edition is updated and substantially expanded, to take into account the significant growth of EU criminal law as a distinct legal field and the impact of the entry into force of the Lisbon Treaty on European integration in criminal matters. The book offers a holistic and in-depth analysis of the key elements of European integration in criminal matters, including EU powers and competence to criminalise, the evolution of judicial co-operation under the principles of mutual recognition and mutual trust, EU action in the field of criminal procedure including legislation on the rights of the defendant and the victim, the evolving role of European bodies and agencies (such as Europol, Eurojust and the European Public Prosecutor's Office) in European criminal law, and the development of EU-wide surveillance and data gathering and exchange mechanisms. Several chapters are devoted to the external dimension of EU action in criminal matters (including transatlantic counter-terrorism cooperation and the impact of Brexit on EU Criminal Law) Throughout the

volume, the constitutional and fundamental rights implications of European integration in criminal matters are highlighted.

Covering all the key principles of EU law, with clear explanation and rigorous analysis, this will give scholars, students, policy makers and legal practitioners interested in the subject a strong understanding of this fascinating but sometimes complex field.

Evolution, Cognition, and the History of Religion: A New Synthesis Springer Nature

In some hands, history can be an inspirational and rewarding subject, yet in others it can seem dry and of little relevance. The aim of this textbook is to enable student teachers to learn to teach history in a way that pupils will find interesting, enjoyable and purposeful. It incorporates a wide range of ideas about the

teaching of history with practical suggestions for classroom practice. This is the third edition of a textbook that has established itself as the leading text for student teachers of history. It has been thoroughly updated, with a revised chapter on the use of ICT in history teaching and major new sections in the areas of inclusion, resources, assessment and professional development. It provides an array of references and materials that give a sound theoretical foundation for the teaching of history, including weblinks to further resources. A range of tasks enable students to put their learning into practice in the classroom. The book also provides reference and access to a wide range of recent and relevant research in the field of history education, which will be of use to student teachers pursuing courses that have a Masters Level component. In all, it is an invaluable resource for student and beginning history teachers.

The primary focus of this book is to educate the reader on the Matching Person and Technology (MPT) model and assessment process that will guide the reader on consumer-centered assistive technology assessment and outcome measures designed to be used for individuals of all ages and all types of disabilities. The first section of the book introduces the MPT and Matching Assistive Technology and CHild (MATCH) assessment process and discusses key documents that align with the assessments including the International Classification of Functioning, Disability, and Health and the Occupational Therapy Framework III. The second section of the book focuses on the international emphasis of the MPT and MATCH assessments. At present, there are eight countries that are represented in this section. Each chapter includes information on the assessment translations (with access to copies if available or at least access on how to obtain copies). The authors discuss research on the use of the assessment within their country to support the assessment use. Lastly, a case scenario is discussed in each chapter to provide the reader with an example of how the assessment was used with an actual consumer. The last section of the book includes a focus on outcome studies in the areas of early childhood, education (primary secondary, and postsecondary), work, and functional independence. This section provides the reader insight into how to outline outcome measures within the MPT and MATCH process. There is an additional section on future works that includes a brief introduction to the Service Animal Adaptive Intervention Assessment. This book is targeted to the Assistive Technology Providers (ATP) and policymakers (health care, education, and rehabilitation engineering), the university student pursuing a career in these areas, and the consumer of assistive technology.

This book analyzes scientific problems within the history of physics, engineering, chemistry, astronomy and medicine, correlated with technological applications in the social context. When and how is tension between disciplines explicitly practised? What is the conceptual bridge between science researches and the organization of technological researches in the development of industrial applications? The authors explain various ways in which the sciences allowed advanced modelling on the one hand, and the development of new technological ideas on the other hand. An emphasis on the role played by mechanisms, production methods and instruments bestows a benefit on historical and scientific discourse: theories, institutions, universities, schools for engineers, social implications as well. Scholars from different traditions discuss the emergency style of thinking in methodology and, in theoretical perspective, aim to gather and re-evaluate the current thinking on this subject. It brings together contributions from leading experts in the field, and gives much-needed insight into the subject from a historical point of view. The volume

composition makes for absorbing reading for historians, philosophers and scientists.

Darwin and Theories of Aesthetics and Cultural History is a significant contribution to the fields of theory, Darwin studies, and cultural history. This collection of eight essays is the first volume to address, from the point of view of art and literary historians, Darwin's intersections with aesthetic theories and cultural histories from the eighteenth century to the present day. Among the philosophers of art influenced by Darwinian evolution and considered in this collection are Alois Riegl, Ruskin, and Aby Warburg. This stimulating collection ranges in content from essays on the influence of eighteenth-century aesthetic theory on Darwin and nineteenth-century debates circulating around beauty to the study of evolutionary models in contemporary art.

Stratigraphy: A Modern Synthesis CRC Press

The updated textbook is intended to serve as an advanced and detailed treatment of the evolution of the subject of stratigraphy from its disparate beginnings as separate studies of sedimentology, lithostratigraphy, chronostratigraphy, etc., into a modern integrated discipline in which all components are necessary. There is a historical introduction, which now includes information about the timeline of the evolution of the components of modern stratigraphy. The elements of the various components (facies analysis, sequence stratigraphy, mapping methods, chronostratigraphic methods, etc.) are outlined, and a chapter discussing the modern synthesis is included near the end of the book, which closes with a discussion of future research trends in the study of time as preserved in the stratigraphic record.
