 NOTE that this book has now been superseded by a newer book "Your Chrome Book" by Tony Loton. Welcome to the brave new world of cloud computing—a world in which locally installed programs and local data are replaced by applications and data in "the cloud", which can be accessed from anywhere in the world using any compatible device. A world in which everything is centered on the Google Chrome web browser running on an Android phone or tablet, a Windows PC, or a dedicated Chromebook computer. Now you don't need to worry about installing and configuring software, backing up your data, or protecting your computer from viruses. And you don't need to worry about having access to your important documents and other files while travelling. Now in its Fifth Edition, The Chrome Book is the Essential Guide to Cloud Computing with Google Chrome and the Chromebook. This most comprehensive and up-to-date edition is

packed full of information, tips and tricks to help you get the most from your cloud computing experience with the Google Chrome web browser and (optionally) the Chromebook computer. Welcome to a new way of working.....and playing.

The miniature web applications known as gadgets (or widgets) are a key component of the distributed web and an ideal way to publish your content far beyond the reach of your own web site. Packaging web content and functionality into a gadget enables it to be seen anywhere from iGoogle to the iPhone—wherever the user may be, on or off the traditional web. Everyone can access your content without having to visit your web site. This book is a practical guide to building gadgets that will work everywhere, from handheld devices to any site on the web. The core methodology is to develop a single code base that will run on all platforms, multiplying the syndication opportunities for maximum return on your development investment. Extending this approach is a technique of abstracting key API calls from the various gadget platforms into a single interface layer, implemented in the book as a compact JavaScript class, allowing your gadgets full access to every platform's power without your having to rewrite your code for each. Learn the key concepts for successfully syndicating web content via gadgets. Build platform-agnostic gadgets that run on all the major web portals. Deploy your gadgets to web-enabled handheld devices.
