Reinventing Hollywood Univ of California Press

Introduction: the way Hollywood told it -- The frenzy of five fat years; Interlude: Spring 1940: lessons from our town

Metaculture Bloomsbury Publishing

This product is a complete reference to both classical material and advanced topics that are otherwise scattered in sometimes hard-to-find papers. A major effort in writing the book was made to highlight the intuitions behind the theoretical development.

Preservation and the New Data Landscape Purdue University Press

Prince, Pen, and Sword offers a synoptic interpretation of rulers and elites in Eurasia from the fourteenth to the eighteenth century. Four core chapters zoom in on the tensions and connections at court, on the nexus between rulers and religious authority, on the status, function, and self-perceptions of military and administrative elites respectively. Two additional concise chapters provide a focused analysis of the construction of specific dynasties (the Golden Horde and the Habsburgs) and narratives of kingship found in fiction throughout Eurasia. The contributors and editors, authorities in their fields, systematically bring together specialised literature on numerous Eurasian kingdoms and empires. This book is a careful and thought-provoking experiment in the global, comparative and connected history of rulers and elites.

System Design, Modeling, and Simulation Harvard University Press

Hollywood moviemaking is one of the constants of American life, but how much has it changed since the glory days of the big studios? David Bordwell argues that the principles of visual storytelling created in the studio era are alive and well, even in today's bloated blockbusters. American filmmakers have created a durable tradition—one that we should not be ashamed to call artistic, and one that survives in both mainstream entertainment and niche-marketed indie cinema. Bordwell traces the continuity of this tradition in a wide array of films made since 1960, from romantic comedies like Jerry Maguire and Love Actually to more imposing efforts like A Beautiful Mind. He also draws upon testimony from writers, directors, and editors who are acutely conscious of employing proven principles of plot and visual style. Within the limits of the "classical" approach, innovation can flourish. Bordwell examines how imaginative filmmakers have pushed the premises of the system in films such as JFK, Memento, and Magnolia. He discusses generational, technological, and economic factors leading to stability and change in Hollywood cinema and includes close analyses of selected shots and sequences. As it ranges across four decades, examining classics like American Graffiti and The Godfather as well as recent success like The Lord of the Rings: The Two Towers, this book provides a vivid and engaging interpretation of how Hollywood moviemakers have created a vigorous, resourceful tradition of cinematic storytelling that continues to engage audiences around the world.

Pandora's Digital Box Addison Wesley

With a new introduction, acclaimed director and screenwriter Paul Schrader revisits and updates his contemplation of slow cinema over the past fifty years. Unlike the style of psychological realism, which dominates film, the transcendental style expresses a spiritual state by means of austere camerawork, acting devoid of self-consciousness, and editing that avoids editorial comment. This seminal text analyzes the film style of three great directors—Yasujiro Ozu, Robert Bresson, and Carl Dreyer—and posits a common dramatic language used by these artists from divergent cultures. The new edition updates Schrader's theoretical framework and extends his theory to the works of Andrei Tarkovsky (Russia), Béla Tarr (Hungary), Theo Angelopoulos (Greece), and Nuri Bilge Ceylan (Turkey), among others. This key work by one of our most searching directors and writers is widely

cited and used in film and art classes. With evocative prose and nimble associations, Schrader consistently urges readers and viewers alike to keep exploring the world of the art film.

Writing Gender in Early Modern Chinese Women's Tanci Fiction BRILL

Peter Fishburn has had a splendidly productive career that led to path-breaking contributions in a remarkable variety of areas of research. His contributions have been published in a vast literature, ranging through journals of social choice and welfare, decision theory, operations research, economic theory, political science, mathematical psychology, and discrete mathematics. This work was done both on an individual basis and with a very long list of coauthors. The contributions that Fishburn made can roughly be divided into three major topical areas, and contributions to each of these areas are identified by sections of this monograph. Section 1 deals with topics that are included in the general areas of utility, preference, individual choice, subjective probability, and measurement theory. Section 2 covers social choice theory, voting models, and social welfare. Section 3 deals with more purely mathematical topics that are related to combinatorics, graph theory, and ordered sets. The common theme of Fishburn's contributions to all of these areas is his ability to bring rigorous mathematical analysis to bear on a wide range of difficult problems.

Revised edition of the authors' *Managing business ethics*, [2014]

Managing Business Ethics Columbia University Press

Drawing on a wide range of films from the 1920s to the 1990s—from Keaton's *Our Hospitality* to *Casablanca* to *Terminator 2*, Kristin Thompson offers the first in-depth analysis of Hollywood's storytelling techniques and how they are used to make complex, easily comprehensible, entertaining films.

Kripke's Worlds University of Chicago Press

On 22 January 2013, the Republic of the Philippines instituted arbitral proceedings against the People's Republic of China (PRC) under the United Nations Convention on the Law of the Sea (UNCLOS) with regard to disputes between the two countries in the South China Sea (South China Sea Arbitration). On 19 February 2013, the PRC formally expressed its opposition to the institution of proceedings, making it clear from the outset that it will not have any part in these arbitral proceedings and that this position will not change. It is thus to be expected that over the next year and a half, the Tribunal will receive written memorials and hear oral submissions from the Philippines only. The Chinese position will go unheard. However, the Tribunal is under an obligation, before making its award, to satisfy itself not only that it has jurisdiction over the dispute, but also that the claims brought by the Philippines are well founded in fact and law (UNCLOS Annex VII, Article 9). This book aims to offer a (not the) Chinese perspective on some of the issues to be decided by the Tribunal and thus to assist the Tribunal in meeting its obligations under the Convention. The book does not set out the official position of the Chinese government, but is rather to serve as a kind of *amicus curiae* brief advancing possible legal arguments on behalf of the absent respondent. The book does not deal with the merits of the disputes between the Philippines and the PRC, but focuses on the questions of jurisdiction, admissibility and other objections which the tribunal will have to decide as a preliminary matter. The book will show that there are insurmountable preliminary objections to the Tribunal deciding the case on the merits and that the Tribunal would be well advised to refer the dispute back to the parties in order for them to reach a negotiated settlement. The book brings together scholars of public international law from mainland China, Taiwan and Europe united by a common interest in the law of the sea and disputes in the South China Sea. This title is included in Bloomsbury Professional's International Arbitration online service.

Foundations of Databases Bioversity International

Bringing together twenty-five years of work on what he has called the "historical poetics of cinema,"

David Bordwell presents an extended analysis of a key question for film studies: how are films made, in particular historical contexts, in order to achieve certain effects? For Bordwell, films are made things, existing within historical contexts, and aim to create determinate effects. Beginning with this central thesis, Bordwell works out a full understanding of how films channel and recast cultural influences for their cinematic purposes. With more than five hundred film stills, *Poetics of Cinema* is a must-have for any student of cinema.

Handbook of Knowledge Representation Farrar, Straus and Giroux

First published in English in 2007 under title: *The history of terrorism: from antiquity to al Qaeda.*

The Sylph Lee & Seshia

Pauline Kael, Andrew Sarris, and Roger Ebert were three of America's most revered and widely read film critics, more famous than many of the movies they wrote about. But their remarkable contributions to the burgeoning American film criticism of the 1960s and beyond were deeply influenced by four earlier critics: Otis Ferguson, James Agee, Manny Farber, and Parker Tyler. Film scholar and critic David Bordwell restores to a wider audience the work of Ferguson, Agee, Farber, and Tyler, critics he calls the 'Rhapsodes' for the passionate and deliberately offbeat nature of their vernacular prose.

Model-Based Machine Learning Univ of California Press

Handbook of Knowledge Representation describes the essential foundations of Knowledge Representation, which lies at the core of Artificial Intelligence (AI). The book provides an up-to-date review of twenty-five key topics in knowledge representation, written by the leaders of each field. It includes a tutorial background and cutting-edge developments, as well as applications of Knowledge Representation in a variety of AI systems. This handbook is organized into three parts. Part I deals with general methods in Knowledge Representation and reasoning and covers such topics as classical logic in Knowledge Representation; satisfiability solvers; description logics; constraint programming; conceptual graphs; nonmonotonic reasoning; model-based problem solving; and Bayesian networks. Part II focuses on classes of knowledge and specialized representations, with chapters on temporal representation and reasoning; spatial and physical reasoning; reasoning about knowledge and belief; temporal action logics; and nonmonotonic causal logic. Part III discusses Knowledge Representation in applications such as question answering; the semantic web; automated planning; cognitive robotics; multi-agent systems; and knowledge engineering. This book is an essential resource for graduate students, researchers, and practitioners in knowledge representation and AI. * Make your computer smarter* Handle qualitative and uncertain information* Improve computational tractability to solve your problems easily

Nanjing 1937 Edinburgh University Press

Co-published with UNESCO A product of the UNESCO-IHP project on Water and Cultural Diversity, this book represents an effort to examine the complex role water plays as a force in sustaining, maintaining, and threatening the viability of culturally diverse peoples. It is argued that water is a fundamental human need, a human right, and a core sustaining element in biodiversity and cultural diversity. The core concepts utilized in this book draw upon a larger trend in sustainability science, a recognition of the synergism and analytical potential in utilizing a coupled biological and social systems analysis, as the functioning viability of nature is both sustained and threatened by humans.

Preface to Plato Issues in Preservation Policy

When the body of an American archaeologist is found floating in the Yangzi River, Ministry of Public Security agent Liu Hulan and her husband, American attorney David Stark, are dispatched to Site 518 to investigate. As Hulan scrutinizes this death—or is it a murder?—David, on behalf of the National Relics Bureau, tries to discover who has stolen from the site an artifact that may prove to the world China's claim that it is the oldest uninterrupted civilization on earth. This artifact is not only an object of great monetary value but one that is emblematic of the very soul of China. Everyone—from the Chinese government, to a religious cult, to an unscrupulous American art collector—wants this relic, and some, it seems, may be willing to kill to get it. At stake in this investigation is control of China's history and national pride, and even stability between China and the United States. The troubled Hulan must overcome her own fears of failure, while David tries desperately to break through the shell that has built up around his wife. As Hulan and David are enmeshed in international schemes for power and the turbulence of their own relationship, these hunters after the truth become the hunted—in a fast-driving narrative set against the backdrop of the building of the Three Gorges Dam, the largest and most expensive project China has undertaken since the Great Wall and the subject of great international debate. It is here, in the heart of the Three Gorges, that David and Hulan will battle their enemies and their own natures to see who will win China's dragon bones. *Dragon Bones* combines ancient myth with contemporary anxieties

The Control of Nature Margaret K. McElderry Books

Possible worlds models were introduced by Saul Kripke in the early 1960s. Basically, a possible world's model is nothing but a graph with labelled nodes and labelled edges. Such graphs provide semantics for various modal logics (alethic, temporal, epistemic and doxastic, dynamic, deontic, description logics) and also turned out useful for other nonclassical logics (intuitionistic, conditional, several paraconsistent and relevant logics). All these logics have been studied intensively in philosophical and mathematical logic and in computer science, and have been applied increasingly in domains such as program semantics, artificial intelligence, and more recently in the semantic web. Additionally, all these logics were also studied proof theoretically. The proof systems for modal logics come in various styles: Hilbert style, natural deduction, sequents, and resolution. However, it is fair to say that the most uniform and most successful such systems are tableaux systems. Given logic and a formula, they allow one to check whether there is a model in that logic. This basically amounts to trying to build a model for the formula by building a tree. This book follows a more general approach by trying to build a graph, the advantage being that a graph is closer to a Kripke model than a tree. It provides a step-by-step introduction to possible worlds semantics (and by that to modal and other nonclassical logics) via the tableaux method. It is accompanied by a piece of software called LoTREC (www.irit.fr/Lotrec). LoTREC allows to check whether a given formula is true at a given world of a given model and to check whether a given formula is satisfiable in a given logic. The latter can be done immediately if the tableau system for that logic has already been implemented in LoTREC. If this is not yet the case LoTREC offers the possibility to implement a tableau system in a relatively easy way via a simple, graph-based, interactive language.

The Indefinite Object in Mandarin Chinese Univ of California Press

Plato's frontal attack on poetry has always been a problem for sympathetic students, who have often minimized or avoided it. Beginning with the premise that the attack must be taken seriously, Eric Havelock shows that Plato's hostility is explained by the continued domination of the poetic tradition in contemporary Greek thought. The reason for the dominance of this tradition was technological. In a nonliterate culture, stored experience necessary to cultural stability had to be preserved as poetry in order to be memorized. Plato attacks poets, particularly Homer, as the sole source of Greek moral and technical instruction-Mr. Havelock shows how the Iliad acted as an oral encyclopedia. Under the label of mimesis, Plato condemns the poetic process of emotional identification and the necessity of presenting content as a series of specific images in a continued narrative. The second part of the book discusses the Platonic Forms as an aspect of an increasingly rational culture. Literate Greece demanded, instead of poetic discourse, a vocabulary and a sentence structure both abstract and explicit in which experience could be described normatively and analytically: in short a language of ethics and science.

The Mathematics of Preference, Choice and Order St. Martin's Press

Focused on a body of films bound together through a cinematic aesthetic of slowness, this book is a pioneering effort to situate, theorise and map out slow cinema within contemporary global film production and across world cinema history.

Disaster Preparedness Report Harvard University Press

This definitive study of Hong Kong cinema examines the work of directors such as Tsui Hark, John Woo, Ringo Lam, Johnnie To, King Hu, and Wong Kar Wai.

Queen of Air and Darkness U of Minnesota Press

"Privilege--the word, the idea, the j'accuse that cannot be answered with equanimity--is the new rhetorical power play. From social media to academia, public speech to casual conversation, "Check your privilege" or "Your privilege is showing" are utilized to brand people of all kinds with a term once reserved for wealthy, old-money denizens of exclusive communities. Today, "privileged" applies to anyone who enjoys an unearned advantage in life, about which they are likely oblivious. White privilege, male privilege, straight privilege--those conditions make everyday life easier, less stressful, more lucrative, and generally better for those who hold one, two, or all three designations. But what about white female privilege in the context of feminism? Or fixed gender privilege in the context of transgender? Or weight and height privilege in the context of hiring practices and salary levels? Or food privilege in the context of public health? Or two parent, working class privilege in the context of widening inequality for single parent families? In *The Perils of Privilege*, Phoebe Maltz Bovy examines the rise of this word into extraordinary potency. Does calling out privilege help to change or soften it? Or simply reinforce it by dividing people against themselves? And is privilege a concept that, in fact, only privileged people are debating?"--
