As a developer you are likely painfully aware that not all features of an application can be anticipated when the software ships. In order to cope with these eventualities and save yourself time (and perhaps money), it makes sense to write your applications in such a way that end users can be made as independent of the developers as possible. Giving your users the power to make changes to the way the application operates once it has shipped gives them more control over the way the application works, while reducing the frequency with which you need to redistribute application files, creating a win-win situation. Pro Dynamic .NET

4.0 Applications explains how to give users the power to create additional data-entry fields, validation logic, and new reports without assistance from the application developer. You will learn how to do this for both desktop (C# and WPF) and web (ASP) applications.

Global Perspectives on Eco-Aesthetics and Eco-Ethics: A Green Critique focuses on the interface of the Anthropocene, sustainability, ecological aesthetics, multispecies relationality, and the environment as reflected in literature and culture. This book examines how writers have addressed ecological crises and environmental challenges that transcend national, cultural, political, social, and linguistic borders. It demonstrates how, as the environmental humanities developed and emerged as a critical discipline, it generated a diverse range of interdisciplinary fields of study such as ecogeography, ecodesign, ecocinema, ecotheology, ecofeminism, ethnobotany, ecolinguistics, and

bioregionalism, and formed valuable, interdisciplinary networks of critique and advocacy—and its contemporary expansion is exceptionally salient to social, political, and public issues today.
