Pediatric Dentistry, 6e-South Asia Edition -E-Book EduGorilla Community Pvt. Ltd.

Therapists inevitably feel more gratified in their work when their cases have better treatment outcomes. This book is designed to help them achieve that by providing practical solutions to problems that arise in psychotherapy, such as: Do depressed people need an antidepressant, or psychotherapy alone? How do you handle people who want to be your “friend,” who touch you, who won’t leave your office, or who break boundaries? How do you prevent people from quitting treatment prematurely? Suppose you don’t like the person who consults you? What if people you treat with CBT don’t do their homework? When do you explain defense mechanisms, and when do you use supportive approaches? Award-winning professor, Jerome Blackman, answers these and many other tricky problems for psychotherapists. Dr. Blackman punctuates his lively text with tips and snippets of various theories that apply to psychotherapy. He shares his advice and illustrates his successes and failures in diagnosis, treatment, and supervision. He highlights fundamental, fascinating, and perplexing problems he has encountered over decades of practicing and supervising therapy.

The International Textbook of Diabetes Mellitus has been a successful, well-respected medical textbook for almost 20 years, over 3 editions. Encyclopaedic and international in scope, the textbook covers all aspects of diabetes ensuring a truly multidisciplinary and global approach. Sections covered include epidemiology, diagnosis, pathogenesis, management and complications of diabetes and public health issues worldwide. It incorporates a vast amount of new data regarding the scientific understanding and clinical management of this disease, with each new edition always reflecting the substantial advances in the field. Whereas other diabetes textbooks are primarily clinical with less focus on the basic science behind diabetes, ITDM's primary philosophy has always been to comprehensively cover the basic science of metabolism, linking this closely to the pathophysiology and clinical aspects of the disease. Edited by four world-famous diabetes specialists, the book is divided into 13 sections, each section edited by a section editor of major international prominence. As well as covering all aspects of diabetes, from epidemiology and pathophysiology to the management of the condition and the complications that arise, this fourth edition also includes two new sections on NAFLD, NASH and non-traditional associations with diabetes, and clinical trial evidence in diabetes. This fourth edition of an internationally recognised textbook will once again provide all those involved in diabetes research and development, as well as diabetes specialists with the most comprehensive scientific reference book on diabetes available.
