With her friend, Pilbeam, she goes off exploring and soon finds out the ship is in deep trouble. It's been knocked off course and invaded by a

gang of Poglites, an alien salvage crew searching for spoons. But even the Poglites need Astra's help when they discover something far more sinister lurking in the canteen... Sure, they're cakes; but no one would describe them as sweet! Another splendiferous adventure from dynamic duo, Philip Reeve and Sarah McIntyre. *GCSE Mathematics* Coordination Group

The book provides directions for encouraging critical thinking, analytical skills and political activism, which consider the needs and interests of diverse children and young people in real classrooms, real schools and real communities. Illustrated throughout with practice-focused research and drawing on the historical

case of Winifred Mercier and her colleagues at the City of Leeds training college who challenged the establishment to leave a legacy of professional control, the book will appeal to practitioners, academics and researchers in the fields of teacher education and education studies.

In Making Every Maths Lesson Count: Six principles to support great maths teaching, experienced maths teacher and lecturer Emma McCrea takes away the guesswork as she sums up the key components of effective maths teaching. Maths classrooms are incredibly complex places. At any given time, the factors influencing the effectiveness of your

teaching are boundless and this can lead to relying on intuition as to what might work best. This book aims to signpost a route through this complexity. Writing in the practical, engaging style of the award-winning Making Every Lesson Count, Emma McCrea helps teachers to move beyond trial and error by sharing evidence-informed tips and suggestions on how they can nudge the

impact of their teaching in the right direction. Making Every Maths Lesson Count is underpinned by six pedagogical principles challenge, explanation, modelling, practice, feedback and questioning and presents 52 high-impact strategies designed to streamline teacher workload and ramp up the level of challenge in the maths classroom. The book draws out the

key findings from the latest research on memory, learning and motivation and each chapter features numerous worked examples to demonstrate the theory in action, together with a concluding series of questions that will help maths practitioners relate the content to their own classroom practice. Furthermore, Emma's writing offers clarity around the language

of maths teaching and learning, and also delves into the finer points of how to identify and address any misconceptions that students may hold. Written for new and experienced practitioners alike, this gimmick-free guide provides sensible solutions to perennial problems and inspires a rich, challenging and evidence-based approach to the teaching of maths. Suitable for maths teachers of

students aged 11 to 18 years, and for primary school maths specialists.

The importance of teaching

Routledge
 The Toxic Classroom offers a wide-ranging look at education today and explores in detail the pressures children experience as a result of constant

change, digital technology and political interference. Beginning with what it is like to be a child in the classroom, the book goes on to provide a detailed analysis of the curriculum, assessment and accountability, school structures, educating for global citizenship and the plethora of social issues schools are now expected to solve. Written from the perspective of a successful

headteacher with over 30 years' teaching experience, the book considers what needs to be done to put things right and outlines a more equitable and effective school system. Each chapter outlines the steps schools can implement immediately and the longer-term policy changes that are needed de-toxify the classroom and facilitate a genuine love of learning.

Offering a challenging yet compelling argument for putting education back into the hands of teachers, this book will be of great interest both to the general reader and to those working within education such as teachers and professionals who wish to improve the ways in which children learn and develop.

The aim of this book is to explain,

carefully but not technically, the differences between advanced, research-level mathematics, and the sort of mathematics we learn at school. The most fundamental differences are philosophical, and readers of this book will emerge with a clearer understanding of paradoxical-sounding concepts such as infinity, curved space, and imaginary numbers. The first few

chapters are about general aspects of mathematical thought. These are followed by discussions of more specific topics, and the book closes with a chapter answering common sociological questions about the mathematical community (such as "Is it true that mathematicians burn out at the age of 25?")
