**A checklist of Texas birds** Philadelphia : University of Pennsylvania Press

Updated and extended, this book provides comprehensive coverage of the 3,619 most important sites for bird conservation in 51 European countries, equivalent to seven percent of the continent's land area. Each country's entry is the work of one to three local experts. Key species, habitats and conservation issues are discussed for every site, with thumbnail location maps. Hundreds of graphics, maps and data tables show key information at national and regional levels. An essential guide for policy-makers and developers, conservationists and environmental consultants, and a call for action to national governments, who have left 40 percent of these sites with no legal protection. "A tremendous source of valuable data" - Ibis. "Of the highest value for conservation in general" - British Birds. "Raises the bar very high for the rest of us" - The Condor. "A working document, to be used by conservationists on a local, national and international level to save these special places from destruction" - BBC Wildlife. *The Gambia* Alfred a Knopf Incorporated  
The Atlas features over 200 maps that provide information on breeding distribution, population, and natural history, with a forecast of each species' prospects for the future.

**An Ecological Survey of the Coastal Region of Georgia** Library of Alexandria

Featuring the snowy egret, wild turkey, brown pelican, screech owl, and many others, this new collection gathers 130 select plates from Audubon's octavo edition. Includes an informative introduction to the artist and his work.

**The Birds of Berkshire County, Massachusetts** Simon and Schuster

The definitive book on birds found in the Carolina Piedmont. Birds of the Central Carolinas is more than just a bird book. It is an invaluable tool for anyone who wants to discover the fascinating history of birds in the region and to understand their status and distribution today. Vastly more informative than a field guide, this

work presents historical material previously unpublished in any book and deftly incorporates firsthand accounts by Piedmont birders. Birds of the Central Carolinas establishes a benchmark for birders to build upon throughout the remainder of the twenty-first century. Covers almost 400 species of birds documented in the Piedmont of both North and South Carolina. Provides detailed analysis of all records for the Central Carolinas, an area that lies at the core of the Carolina Piedmont and also at the center of the Piedmont Ecoregion--as mapped by The Nature Conservancy. Incorporates the results of the Mecklenburg County Breeding Bird Atlas--the first county-level atlas project in the Carolinas. Shares firsthand accounts of bird observations over the past 150 years. A book that is both beautifully crafted and an invaluable resource for ornithology and conservation in the Carolinas. Dr. R.O. Bierregaard, ornithologist, Research Associate at Academy of Natural Sciences of Drexel University. [Birds of the Central Carolinas] tells a story we need to pay attention to. Jim Garges, Director, Mecklenburg County Park and Recreation Department. Birds' futures and fortunes are inextricably twined with those of humankind. Seriff knows intimately how the inhabitants of Piedmont skies are changing. Amber Ververka, writer, Keepingwatch.org, UNC Charlotte  
*A Birder's Guide to Florida* Tilbury House Publishers and Cadent Publishing  
"This is the second issue in the Global Re-introduction Perspectives series and has been produced in the same standardized format as the previous one. The case-studies are arranged in the following order: Introduction, Goals, Success Indicators, Project Summary, Major Difficulties Faced, Major Lessons Learned, Success of Project with reasons for success or failure. For this second issue we received a total of 72 case-studies compared to 62 in the last issue. These case studies cover the following taxa as follows: invertebrates (9), fish (6), amphibians (5), reptiles (7), birds (13), mammals (20) and plants (12) ... We hope the information presented in this book will provide a broad global perspective on challenges facing re-introduction projects trying to restore biodiversity."--Pritpal S. Soorae.

**Birds of the Central Carolinas** John Wiley & Sons

Describes more than 250 birding locations throughout Florida, with over 80 maps, bar-graphs, and details about over 180 species.

This brand new Bradt Guide to The Gambia provides all the background and practical information you need to explore the beaches and interior of Africa's smallest - and arguably most welcoming - country.

*Life of a Scotch Naturalist: Thomas Edward* Museum Tusculanum Press

This book has been published as part of a major conference held in Sheffield UK, on the theme of 'Animals, Man and Treescapes' which looked at the interactions between grazing animals, humans and wooded landscapes. It linked community projects and educational outputs throughout the UK, across Europe and beyond. The event promoted landscape ecology conservation through local, national and international initiatives.

Meet the ladies: a flock of smart, affectionate, highly individualistic chickens who visit their favorite neighbors, devise different ways to hide from foxes, and mob the author like she's a rock star. In these pages you'll also meet Maya and Zuni, two orphaned baby hummingbirds who hatched from eggs the size of navy beans, and who are little more than air bubbles fringed with feathers. Their lives hang precariously in the balance—but with human help, they may one day conquer the sky. Snowball is a cockatoo whose dance video went viral on YouTube and who's now teaching schoolchildren how to dance. You'll meet Harris's hawks named Fire and Smoke. And you'll come to know and love a host of other avian characters who will change your mind forever about who birds really are. Each of these birds shows a

different and utterly surprising aspect of what makes a bird a bird—and these are the lessons of Birdology: that birds are far stranger, more wondrous, and at the same time more like us than we might have dared to imagine. In Birdology, beloved author of The Good Good Pig Sy Montgomery explores the essence of the otherworldly creatures we see every day. By way of her adventures with seven birds—wild, tame, exotic, and common—she weaves new scientific insights and narrative to reveal seven kernels of bird wisdom. The first lesson of Birdology is that, no matter how common they are, Birds Are Individuals, as each of Montgomery's distinctive Ladies clearly shows. In the leech-infested rain forest of Queensland, you'll come face to face with a cassowary—a 150-pound, man-tall, flightless bird with a helmet of bone on its head and a slashing razor-like toenail with which it (occasionally) eviscerates people—proof that Birds Are Dinosaurs. You'll learn from hawks that Birds Are Fierce; from pigeons, how Birds Find Their Way Home; from parrots, what it means that Birds Can Talk; and from 50,000 crows who moved into a small city's downtown, that Birds Are Everywhere. They are the winged aliens who surround us. Birdology explains just how very "other" birds are: Their hearts look like those of crocodiles. They are covered with modified scales, which are called feathers. Their bones are hollow. Their bodies are permeated with extensive air sacs. They have no hands. They give birth to eggs. Yet despite birds' and humans' disparate evolutionary paths, we share emotional and intellectual abilities that allow us to communicate and even form deep bonds. When we begin to comprehend who birds really are, we deepen our capacity to approach, understand, and love these otherworldly creatures. And this, ultimately, is the priceless lesson of Birdology: it communicates a heartfelt fascination and awe for birds and restores our connection to these complex, mysterious fellow creatures.

**Global Re-introduction Perspectives** Harriman House Limited  
Current Ornithology publishes authoritative, up-to-date, scholarly reviews of topics selected from the full range of current research

in avian biology. Topics cover the spectrum from the molecular level of organization to population biology and community ecology. The series seeks especially to review (1) fields in which an abundant recent literature will benefit from synthesis and organization, or (2) newly emerging fields that are gaining recognition as the result of recent discoveries or shifts in perspective, or (3) fields in which students of vertebrates may benefit from comparisons of birds with other classes. All chapters are invited, and authors are chosen for their leadership in the subjects under review.

The rugged physical beauty of the west coast of Vancouver Island has long been a major attraction, but its distinctive avian population has also made it a major birdwatching destination. The Birds of Vancouver Island's West Coast presents accounts of all of the species thus far recorded as occurring in the region - 360 in total - and updates the 231 species recorded up to 1978. Each account includes a brief introduction to the species and an overview of its total range. The essential guide to the birds of the region, this book will inform, delight, and surprise amateur and professional birders alike.

Birds of Idaho IUCN

Short listed for the Green Earth book award In early April, as Owen and his sister search the hickories, oaks, and dogwoods for returning birds, a huge group of birds leaves the misty mountain slopes of the Yucatan peninsula for the 600-mile flight across the

Gulf of Mexico to their summer nesting grounds. One of them is a Cerulean warbler. He will lose more than half his body weight even if the journey goes well. Aloft over the vast ocean, the birds encourage each other with squeaky chirps that say, "We are still alive. We can do this." Owen's family watches televised reports of a great storm over the Gulf of Mexico, fearing what it may mean for migrating songbirds. In alternating spreads, we wait and hope with Owen, then struggle through the storm with the warbler. This moving story with its hopeful ending appeals to us to preserve the things we love. The backmatter includes a North American bird migration map, birding information for kids, and guidance for how native plantings can transform yards into bird and wildlife habitat. *Atlas of Breeding Birds of the Maritime Provinces* Lulu.com
