Technology Strategy John Wiley & Sons Providing a reasonable level of profitability through productivity is - and will remain - one of the fundamental tasks of the management teams of any production company. Manufacturing Cost

Policy Deployment (MCPD) and Methods Design Concept (MDC): The Path to Competitiveness contains two new methodologies to improving the productivity and profitability of production systems that continuously increase competitiveness: Manufacturing Cost Policy Deployment (MCPD) and Methods Design Concept (MDC). Both MCPD and MDC are the result of long-time synthesis and distillation, being implemented successfully, totally or partially, in many companies. The MCPD system, developed by Alin Postecă, is a manufacturing cost policy aimed at continuous cost improvement through a systemic and systematic approach. The MCPD is a methodology that improves the production flow driven by the need for Manufacturing Cost Improvement

(MCI) for both existing and future products through setting targets and means to continuously improve production process productivity for each product family cost. The MDC, developed by Shigeyasu Sakamoto, design the effective manufacturing methods using a tool of engineering steps identifying ideas for increasing productivity called KAIZENSHIRO (improvable value as a target). The MDC results on production methods lead to effectiveness of work measurement for performance (P) and to knowledge and improvement of production control and planning as utilization (U), in order to achieve labor target costs. The combination of MCPD and MDC methodologies can provide a unique approach for the managers who are seeking new ways for increasing

productivity and profitability to increase the competitive level of their manufacturing company.

Activity-Based Cost Management CRC Press

In a developing country like Nigeria, the available land is plentiful but is relatively more expensive in city areas like Abuja, Lagos, and Port Harcourt. Hence, to reduce cost, land outside the cities is often sought. In Nigeria, labor is cheap per hour, but it becomes more expensive as one moves toward the cities.

Nevertheless, to reduce overall costs, transportation costs should be reduced, so the site of the factory should be close to a large market for its products. In developed countries, government policies influence significantly the locations of factories. For instance,

factories are set up in high-unemployment areas to comply with the national development policy for the country. In Nigeria, the siting of a factory is often based on political rather than management considerations. Therefore, many government-owned companies exist in economically nonviable locations, for example, the refinery and the fertilizer plant at Kaduna. However, private investors prefer to start companies in their own localities. Reliable electricity supplies and an adequate transportation infrastructure are essential for most companies. Unfortunately, in Nigeria, companies too often have to provide standby generators, thereby increasing production costs. This is one of the reasons why made in Nigeria goods tend

to be more expensive than the corresponding imported ones, despite far lower local labor costs. This textbook which provides desirable service to students, engineers, managers and politicians covers an extensive range of topics that includes but not limited to essentials of management, optimal maintenance of equipment, financial management, cost/benefit analysis, creative thinking, entrepreneurship, operation research, queuing theory, the factory environment, depreciation replacement theory, marketing, automation and motivation.

In the classroom, ABC looks like a great way to manage a company's resources. But many executives who have tried to implement ABC on a large scale in their organizations have found the approach limiting and frustrating. Why? The employee surveys that companies used to estimate resources required for business activities proved too time-consuming, expensive, and irritating to employees. This book shows you how to

implement time-driven activity-based costing (TDABC), an easier and more powerful way to implement ABC. You can now estimate directly the resource demands imposed by each business transaction, product, or customer. The payoff? You spend less time and money obtaining and maintaining TDABC data—and more time addressing problems that TDABC reveals, such as inefficient processes, unprofitable products and customers, and excess capacity. The authors also show how to use TDABC to link strategic planning to operational budgeting, to enhance the due diligence process for mergers and acquisitions, and to support continuous improvement activities such as lean management and benchmarking. In presenting their model, the authors

define the two questions required to build TDABC: 1) How much does it cost per time unit to supply resource capacity for each business process? 2) How much resource capacity (time) is required to perform work for a company's many transactions, products, and customers? The book demonstrates how to develop simple, valid answers to these two questions. Kaplan and Anderson illustrate the TDABC approach with a wealth of case studies, in diverse settings, based on actual implementations.

Management Accounting Sultan Chand & Sons

Bei der Festlegung eines Produktpreises gibt es drei Möglichkeiten. Wird der Preis zu hoch angesetzt, verkauft sich das Produkt schlecht; wird er zu niedrig

angesetzt, wird die Arbeit unrentabel. Nur dann, wenn der Preis produktangemessen ist, schlägt sich dies in guten Absatzzahlen und entsprechendem Gewinn für das Unternehmen nieder. Ebenso wie Activity-Based Costing (ABC - auslastungsorientierte Kostenrechnung) und Activity-Based Management (ABM - Prozesskostenmanagement) die Kostenrechnung revolutioniert haben, liefert die Methode des Activity-Based Pricing (kostenorientierte Preisgestaltung) einen disziplinierten Ansatz für die Preisbestimmung. Activity-Based Pricing berücksichtigt die tatsächlichen Produktions- und Servicekosten, die mit Hilfe des Activity-Based Costing exakt ermittelt werden können. Auf diese Weise kann man den

Preis für das jeweilige Produkt genau festlegen. "Pricing for Profitability" erläutert ausführlich, wie ABC- und ABM-Verfahren angewendet werden müssen, um eine Preisgestaltung mit maximaler Gewinnaussicht zu erreichen. Darüber hinaus werden auch Preisstrategien für absatzstarke/absatzschwache Produkte sowie für komplexe und einfache Produkte diskutiert, die sich vom "Durchschnitt" abheben. "Pricing for Profitability" - Ein nützlicher Leitfaden für alle wettbewerbs- und gewinnorientierten Finanzleiter und Controller.

In today's highly pressurized business environment, creating value is the number one priority for organizations. The key to achieving this is having a budget and accounting system that supports long-term goals. More and more organizations are now turning to activity-based budgeting (ABB), an innovative approach that can help organizations become more competitive by linking the budgeting process to organization strategy. Explaining the importance of budgeting by activities rather than by cost elements, this resource is a practical how-to that covers the essentials of Driving Value Using Activity-Based Budgeting. includes a major new section Step-by-Step: Quantitative analysis of cost functions in hotels & restaurants. Advanced Management Accounting (Text, Problems & Cases) John Wiley & Sons

Managerial accounting is the process of identifying, measuring, analyzing, interpreting, and communicating information in pursuit of an organization's goals. Managerial accounting is an integral part of the management process, and managerial accountants are important strategic partners in an organization's domestic and international management teams

Managerial accounting provides the essential data with which the organizations are actually run. Managerial accounting is also termed as management accounting or cost

accounting. Financial accounting provides the scorecard by which a company's overall past performance is judged by outsiders. Managerial accountants prepare a variety of reports. Some reports focus on how well managers or business units have performed-comparing actual results to plans and to benchmarks.

Time-Driven Activity-Based Costing

McGraw Hill

This dynamic and beautifully written textbook takes a modern and innovative approach to strategy by placing technology at its heart, bridging the gap between general strategy texts and

specialist technology and innovation literature. It addresses the challenges and opportunities presented to organisations by disruptive technological change and takes into account the navigation of uncertain business environments. In addition to examining more established concepts and theories, the text also explores new disruptive business models and non-traditional approaches to strategy development such as effectuation, the Business Model Canvas and prediction logic. This comprehensive and critical approach is supported by a rich assortment of practical examples and cases drawn from different sectors and a range of exciting companies from all over the world, helping students and practitioners to apply theory to practice. This will be

an essential core text for modules on technology strategy and innovation at upper undergraduate, postgraduate and MBA levels, and invaluable reading for senior executives and aspiring managers who seek to understand how to implement strategy in a volatile disruptive environment.

John Wiley & Sons

Profitable production planning is and will remain an eternal challenge to ensuring the prosperity and dignity of companies in a global market. Even though there are different approaches to achieving the target profitability through productivity in the production planning stage, these approaches do not guarantee consistent planning, creation, and sustenance of synchronous profitable operations for multiannual and annual target profit. In feedback to this predicament, Alin Posteuca develops a new system called speed-based target profit (SBTP). SBTP is the profitable production management and manufacturing improvement system that approaches production planning to achieve unit speed of target profit for

target products through manufacturing cost improvement and bottleneck profitability control for maximum takt time. Managers and practitioners within manufacturing companies will discover a practical approach for cost down and cash up by applying a powerful operational profitable production planning formula to meet profitability expectations through productivity based on strong leadership with the help of a specific system for feedforward, concurrent, and feedback control. Therefore, the SBTP system in this book presents a holistic approach to profitability for target products and the development of its own mechanism since the acceptance of each order from customers to achieve continuous synchronization of all manufacturing

processes to market requirements, profitability management, and profitable production planning. The uniqueness of the book is reinforced by a detailed presentation of the successful application of the SBTP system in two case studies, as a way of life and a unit speed of target profit improvement ethos at all hierarchical levels, in two multinational manufacturing companies operating in highly competitive markets in order to address the synchronous profitable operations for both the sales increase scenario and the sales decrease scenario. By adopting the SBTP system, your company will be able to consistently achieve unit speed of target profit in the bottleneck process for fulfilling annual and multiannual target profit as a unique and effective way

through a new profitable production planning paradigm that operates according to its own production system.
