The Workshop on the Knowledge Economy and Postsecondary Education documents changes seen in the postsecondary education system. In her report Lisa Hudson focuses on who is participating in postsecondary education; Tom Bailey concentrates on community colleges as the most responsive institutions to employer needs; Carol Twigg surveys the ways that four-year institutions are attempting to modify their curricular offerings and pedagogy to adapt those that will be more useful; and Brian Pusser emphasizes the public's broader interests in higher education and challenges the acceptance of the primacy of job preparation for the individual and of "market" metaphors as an appropriate descriptor of American higher education. An example of a for-profit company providing necessary instruction for workers is also examined. Richard Murnane, Nancy Sharkey, and Frank Levy investigate the experience of Cisco high school and community college students need to testify to their information technology skills to earn certificates. Finally, John Bransford, Nancy Vye, and Helen Bateman address the ways learning occurs and how these can be encouraged, particularly in cyberspace.

This work evolved over thirty combined years of teaching general chemistry to a variety of student demographics. The focus is not to recap or review the theoretical concepts well described in the available texts. Instead, the topics and descriptions in this book make available specific, detailed step-by-step methods and procedures for solving the major types of problems in general chemistry. Explanations, instructional process sequences, solved examples and completely solved practice problems are greatly expanded, containing significantly more detail than can usually be devoted to in a comprehensive text. Many chapters also provide alternative viewpoints as an aid to understanding. Key Features: The authors have included every major topic in the first semester of general chemistry and most major topics from the second semester. Each is written in a specific and detailed step-by-step process for problem solving, whether mathematical or conceptual Each topic has greatly expanded examples and solved practice problems

containing significantly more detail than found in comprehensive texts Includes a chapter designed to eliminate confusion concerning acid/base reactions which often persists through working with acid/base equilibrium Many chapters provide alternative viewpoints as an aid to understanding This book addresses a very real need for a large number of incoming freshman in STEM fields
