An introduction to these bizarre and beautiful creatures of the sea, filled with color photos and illustrations: "Fascinating."—Boing Boing Jellyfish are the oldest multi-organelle life form on the planet, having inhabited the ocean for more than five hundred million years. With their undulating umbrella-shaped bells and sprawling tentacles, they are compelling and gorgeous, strange and dangerous. In many places they're also vastly increasing in number, and these population blooms may be an ominous indicator of the rising temperatures and toxicity of the oceans. Jellyfish presents these aquarium favorites in all their glory. Fifty unique species, from the purple people eater to black sea nettles, are presented in stunning photos along with the most current scientific information on their anatomy, history, distribution, position in the water, and environmental status. Foremost jellyfish expert Lisa-ann Gershwin provides an insightful look at the natural history and biology of each of these spellbinding creatures, plus a timely take on their place in the rapidly changing and deteriorating condition of the oceans. Learn about immortal jellyfish who live and die and live again—as well as those who camouflage themselves amid sea grasses and shells, hiding in plain sight. Discover the jellyfish that's the world's most venomous animal, and the jellyfish that helped scientists win the Nobel Prize. They're all here and more in this delightful volume. "A thorough coverage of jellyfish history, biology and ecology. Gershwin, a marine biologist who has discovered over 200 new species of jellyfish, does an excellent job of combining a compelling narrative of 50 different jellyfish with luscious, I-can't-believe-they're-real photos."—Boing Boing

"A book full of wonders" —Helen Macdonald, author of *H Is for Hawk* "Witty, insightful. . . The story of jellyfish. . . is a significant part of the environmental story. Berwald's engaging account of these delicate, often ignored creatures shows how much they matter to our oceans' future." —New York Times Book Review Jellyfish have been swimming in our oceans for well over half a billion years, longer than any other animal that lives on the planet. They make a venom so toxic it can kill a human in three minutes. Their sting—microscopic spears that pierce with five million times the acceleration of gravity—is the fastest known motion in the animal kingdom. Made of roughly 95 percent water, some jellies are barely perceptible virtuosos of disguise, while others glow with a

luminescence that has revolutionized biotechnology. Yet until recently, jellyfish were largely ignored by science, and they remain among the most poorly understood of ocean dwellers. More than a decade ago, Juli Berwald left a career in ocean science to raise a family in landlocked Austin, Texas, but jellyfish drew her back to the sea. Recent, massive blooms of billions of jellyfish have clogged power plants, decimated fisheries, and caused millions of dollars of damage. Driven by questions about how overfishing, coastal development, and climate change were contributing to a jellyfish population explosion, Juli embarked on a scientific odyssey. She traveled the globe to meet the biologists who devote their careers to jellies, hitched rides on Japanese fishing boats to see giant jellyfish in the wild, raised jellyfish in her dining room, and throughout it all marveled at the complexity of these alluring and ominous biological wonders. Gracefully blending personal memoir with crystal-clear distillations of science, *Spineless* is the story of how Juli learned to navigate and ultimately embrace her ambition, her curiosity, and her passion for the natural world. She discovers that jellyfish science is more than just a quest for answers. It's a call to realize our collective responsibility for the planet we share.

New York Times bestselling author Julie Kagawa continues her transcendent dystopian series, *BLOOD OF EDEN*, with an unforgettable journey into a future world that illuminates the very heart of what it means to be human. Allison Sekemoto has done the unthinkable: died so that she might continue to live. Cast out of Eden and separated from the boy she dared to love, Allie will follow the call of blood to save her creator, Kanin, from a psychotic vampire. But there's a new plague on the rise, a strain of the Red Lung virus that wiped out most of humanity generations ago – and this strain is deadly to humans and vampires alike. Allison thought that immortality was forever. But with eternity itself hanging in the balance, the lines between human and monster will blur even further as Allie faces another choice she could never have imagined having to make... 'Kagawa wraps excellent writing and skillful plotting around a well-developed concept and engaging characters, resulting in a fresh and imaginative thrill-ride that deserves a wide audience.' – Publishers Weekly, starred review, of *The Immortal Rules*

When I Was a Fairy is a heart-warming tale about love, loss and growing old. Touching on themes of dementia, old age, and relationships between grandparents and their grandchildren, this is not only a story about fairies, but also on the magic of life and what we can share with one another from generation to generation. When I was a fairy, I used to dance on daffodils. I used to bounce on blueberries and ride on raindrops. When I was a fairy, mountains were molehills. Back when I was a fairy ... I'd almost forgot.

Physical Chemistry of Metallurgical Processes Houghton Mifflin Harcourt

The »World Atlas of Jellyfish« presents in a lavishly illustrated multi-author compendium the more than 260 species of medusae (Scyphomedusae and Cubomedusae) described so far. The general, first part deals with their structure, complex life cycles and rare fossil records. But it also details on collection, cultivation and fishery methods, even gives hints for photography and cooking recipes. Additionally, it covers the nature of medusae venoms, the effects and treatment of their stings. The second part gives concise systematic descriptions of all jellyfish species and their developmental stages known so far. Numerous illustrations, distribution maps, taxonomic keys and literature lists allow for detailed identification and information. Outstanding among the wealth of wonderful illustrations are hitherto unpublished artistic colour paintings by Ernst Haeckel. The beauty of the animals is underlined by the demanding typesetting of the book. This »Atlas« is a unique overview summarizing our knowledge on the world's jellyfish in all their facets. It is of importance not only for scientists worldwide, but also a source of fascination for divers and lovers of marine life. Corresponding to its far-reaching relevance and to the internationality of contributing authors the volume is written in English.

Every afternoon at four o'clock, Mister Rodriguez steps out of a narrow laneway and strolls through the street. The village children watch him go, ever more curious about the enigmatic old man with the bushy white mustache. Some say they've seen him float above the ground. Others say he played a piano without touching a single key. The truth, though, is more beautiful than any of the children could have imagined. Author Christiane Duchesne and TD Canadian Children's Literature Award-winning illustrator François Thisdale bring a touching story to life with delicacy and heart.

Interspecies Futures [IF] Quirky Creatures

These vampires don't sparkle...they bite. Book 3 of the Blood of Eden trilogy by Julie Kagawa, New York Times bestselling author of *The Iron Fey*, concludes the explosive dark fantasy series where vampires rule, humans are prey, and one girl will become what she hates most to save all she loves. Is she more human...or monster? With the death of her beloved, Allison Sekemoto has her answer: MONSTER. Now she will embrace her cold vampire side to hunt down and end Sarren, the irredeemable vampire who murdered him. But the trail is bloody and long, and Sarren has left many shocking surprises along the way. The trail leads Allie and her companions toward the one place they must protect at any cost—Eden, the last vampire-free zone on earth. And Sarren has one final, brutal shock in store for Allie. In this ruined world where no life is sacred and former allies can turn on you in a heartbeat, Allie will make her final stand. But even if she succeeds, triumph is short-lived in the face of surviving forever alone. "A bloody good way to end a trilogy." —Kirkus Reviews Books in the Blood of Eden series: *The Immortal Rules* *The Eternity Cure* *The Forever Song*

Bedtime Stories for Children S&S/ Marysue Rucci Books

It is clear that a new type of human approach to marine ecosystems is needed to confront phenomena such as jellyfish blooms. This document provides an updated overview of this phenomenon in the Mediterranean and Black Sea and illustrates how the problem is affecting societies. It reviews current knowledge on gelatinous plankton in the affected region, providing a framework for its inclusion into fisheries science and the management of human activities such as tourism and coastal development. Fact sheets on the most important gelatinous plankters of the Mediterranean and Black Seas are included as an appendix.

The Immortal Rules Little, Brown Books for Young Readers

Did you know that wrestlers have feelings? Knights do too. Even superheroes feel sad sometimes. In fact everyone has feelings - even dads who love their children! Now in paperback, children will love to recognise the feelings in Keith Negley's bold illustrations which accompany a fun-to-read aloud narrative. Parents can enjoy and engage with children in a light-hearted discussion about emotions and how they affect us all.

Jellyfish Age Backwards Lost the Plot

The Extreme Life of the Sea exposes the eternal darkness of the deepest undersea trenches to show how marine life thrives against the odds, describing how flying fish strain to escape their predators, how predatory deep-sea fish use red searchlights only they can see to find and attack food, and how, at the end of her life, a mother octopus dedicates herself to raising her batch of young.

Review of Jellyfish Blooms in the Mediterranean and Black Sea The Immortal Jellyfish

Seven stunning stories of speculative fiction by the author of *A Boy and His Dog*. In a post-apocalyptic world, four men and one woman are all that remain of the human race, brought to near extinction by an artificial intelligence. Programmed to wage war on behalf of its creators, the AI became self-aware and turned against humanity. The five survivors are prisoners, kept alive and subjected to brutal torture by the hateful and sadistic machine in an endless cycle of violence. This story and six more groundbreaking and inventive tales that probe the depths of mortal experience prove why Grand Master of Science Fiction Harlan Ellison has earned the many accolades to his credit and remains one of the most original voices in American literature. *I Have No Mouth and I Must Scream* also includes "Big Sam Was My Friend," "Eyes of Dust," "World of the Myth," "Lonelyache," Hugo Award finalist "Delusion for a Dragon Slayer," and Hugo and Nebula Award finalist "Pretty Maggie Moneyeyes."
