*French Accounting History* Editions Ellipses

This volume illustrates the research not only of French accountants (Colasse, Durand, Jouanique, Lemarchand, Nikitin, Richard, Tessier) but also the work of Belgian authors writing in French (Stevelinck, Haulotte) and of French non-accountants (de Swarte, Durdilly, Sauvvy). The work of British and North American academics, writing in English on French accounting history is also illustrated from the 1930s (Howard, Edwards), through to the 1960s (Parker) and the more recent research of Standish, Fortin and Bhimani. The contributions to this volume have been arranged both chronologically and thematically as follows: the earliest business accounting records; the first French accounting authors; Colbert, Savbary and the Ordonnance de Commerce; the eighteenth and nineteenth centuries; cost accounting; the national accounting plan; national income accounting; government accounting and accounting theory. An abstract of each contribution is given in both English and French.

*Cours de Droit Administratif Et de Législation Française Des Finances Avec Introduction de Droit Constitutionnel Et Les Principes Du Droit Public* Presses Université Laval

When originally published in 1994 this volume was the first international review of accounting theory to focus on the contributions of its leading thinkers. Very few attempts had been made, in the accounting literature, to assess the contribution of the theorists who have had such an important influence on the direction of research and practice. Written by experts the studies in this volume provide a unique guide to the development of accounting theory and practice in regions as diverse as the USA,

Japan and Europe.

**Cost and Management** Universidad de Sevilla  
Starting with the first "scientific" economists such as Cantillon (1755) and Quesnay (1758) and ending with Piketty (2019), this book explores the treatment of the concept of capital in the history of accounting and economic thought. The work provides a rare juxtaposition of the reasoning, discourse and writings of accountants and economists. With regard to 'capital', this approach highlights the ongoing struggle between these "uncongenial twins" - as Kenneth Boulding put it - for primacy in analysing, and utilising, capitalism. But if they are certainly "uncongenial", the book also argues that it is wrong to ever classify these two disciplines as "twins" because they have taken

very different paths ever since scientism came to dominate in economics and ethical and moral considerations were put to one side. This book will be of significant interest to readers to history of economic thought, critical accounting and heterodox economics.
