An ever-widening gap exists between how students and schools use communication technology. Using Network and Mobile Technology to Bridge Formal and Informal Learning introduces new methods (inspired by

'pedagogy 2.0') of harnessing the potential of communication technologies for teaching and learning. This book considers how attitudes towards network and mobile technology (NMT) gained outside the school can be shunted into new educational paradigms combining formal and informal learning processes. It begins with an overview of these paradigms, and their sustainability. It then considers the pedagogical dimension of formal/informal integration

through NMT, moving on to teachers' professional development. Next, the organizational development of schools in the context of formal and informal learning is detailed. Finally, the book covers the role of technologies supporting formal/informal integration into subject-oriented education. Includes a framework for the sustainability of new educational paradigms based on the combination of formal and informal learning processes supported by network and mobile technology (NMT) Provides a series of recommendations on how to use attitudes towards NMT gained outside the school to integrate formal and informal learning Gives a teacher training approach on how to use network and mobile technology-based informal learning to enhance formal learning

This document is designed to be a resource for those Linux users wishing to seek clarification on Linux/UNIX/POSIX related terms and jargon. At approximately 24000 definitions and two thousand pages it is one of the largest Linux related dictionaries currently available. Due to the rapid rate at which new terms are being created it has been decided that this will be an active project. We welcome input into the content of this document. At this moment in time half yearly updates are being envisaged. Please note that if you wish to find a 'Computer Dictionary' then see the 'Computer Dictionary Project' at <http://computerdictionary.tsf.org.za/>

Searchable databases exist at locations such as:

Training and Development Centre is a centre of the Hong Kong Polytechnic University, established in 2000.

Presently SWP is delivering professional grade Linux and related Open Source Software (OSS) technology training and consultant service in Hong Kong. SWP has an ambitious aim to promote the use of Linux and related Open Source Software (OSS) and Standards. The vendor independent positioning of SWP has been very well perceived by the market. Throughout the last couple of years, SWP becomes the Top Leading OSS training and service provider in Hong Kong.

Geona, operated by Gold Vision Communications, is a new powerful search engine and internet directory, delivering quick and relevant results on almost any topic or subject you can imagine. The term "Geona" is an Italian and Hebrew name, meaning wisdom, exaltation, pride or majesty. We use our own database of spidered web sites and the Open Directory database, the same database which powers the core directory services for the Web's largest and most popular search engines and portals. Geona is spidering all domains listed in the non-adult part of the Open Directory and millions of additional sites of general interest to maintain a fulltext index of highly relevant web sites.

 'A book for every teacher's bookshelf. This book gives a comprehensive overview of the tools and apps that can be used to help turn a mediocre teaching session into an outstanding one.' - Cheryl Hine, Leeds City College
 'Megan Poore's updated text is needed more than ever, as social media becomes increasingly integrated in many aspects of education. I would recommend it to all practising teachers and trainee teachers, whatever their subject.' - Sue Howarth, University of Worcester
 This is an essential guide to using social media to enhance teaching and learning in schools. It combines practical information on using all forms of social media for educational purposes

and provides indispensable advice on how to tackle issues arising from social media use in the classroom. Key topics include: using blogs, wikis, social media networks and podcasting, digital literacy and new modes of learning, digital participation, cyberbullying and understanding risk online. This second edition includes:

- Reflective tasks in each chapter inviting you to critically consider important aspects of using social media in education.
- Expanded coverage of game-based learning and mobile learning.
- New examples tailored for use in primary and secondary schools.
- A website including additional resources and handouts.

This is essential reading for anyone training to teach in schools, and experienced teachers seeking to improve their

understanding of using social media for teaching in informed and appropriate ways.

This book offers a primer on the valuation of digital intangibles, a trending class of immaterial assets. Startups like successful unicorns, as well as consolidated firms desperately working to re-engineer their business models, are now trying to go digital and to reap higher returns by exploiting new intangibles. This book is innovative in its design and concept since it tackles a frontier topic with an original methodology, combining academic rigor with practical insights. Digital intangibles range from digitized versions of traditional immaterial assets (brands, patents, know-how, etc.) to more trendy

applications like big data, Internet of Things, interoperable databases, artificial intelligence, digital newspapers, social networks, blockchains, FinTech applications, etc. This book comprehensively addresses related valuation issues, and demonstrates how best practices can be applied to specific asset appraisals, making it of interest to researchers, students, and practitioners alike.

Rather than deciding whether or not to get involved in global sourcing, many companies are facing decisions about whether or not to apply agile methods in their distributed projects. These companies are often motivated by the opportunities to solve the coordination and communication difficulties associated with global software development. Yet while agile principles

prescribe close interaction and co-location, the very nature of distributed software development does not support these prerequisites. Šmite, Moe, and Ågerfalk structured the book into five parts. In “Motivation” the editors introduce the fundamentals of agile distributed software development and explain the rationale behind the application of agile practices in globally distributed software projects. “Transition” describes implementation strategies, adoption of particular agile practices for distributed projects, and general concepts of agility. “Management” details practical implications for project planning, time management, and customer and subcontractor interaction. “Teams” discusses agile distributed team

configuration, effective communication and knowledge transfer, and allocation of roles and responsibilities. Finally, in the “Epilogue” the editors summarize all contributions and present future trends for research and practice in agile distributed development. This book is primarily targeted at researchers, lecturers, and students in empirical software engineering, and at practitioners involved in globally distributed software projects. The contributions are based on sound empirical research and identify gaps and commonalities in both the existing state of the art and state of the practice. In addition, they also offer practical advice through many hints, checklists, and experience reports. Questions answered in this book include: What should

companies expect from merging agile and distributed strategies? What are the stumbling blocks that prevent companies from realizing the benefits of the agile approach in distributed environments, and how can we recognize infeasible strategies and unfavorable circumstances? What helps managers cope with the challenges of implementing agile approaches in distributed software development projects? How can distributed teams survive the decisions taken by management and become efficient through the application of agile approaches?

Books For Young Readers

Drawing on 15 months of ethnographic research in one of the most under-developed regions in the Caribbean island of Trinidad, this book describes the uses and consequences of social media for its residents. Jolynna Sinanan argues that this semi-urban town is a place in-between: somewhere city dwellers look down on and villagers look up to. The complex identity of the town is expressed through uses of social media, with significant results for understanding social media more generally. Not elevating oneself above others is one of the core values of the town, and social media becomes a tool for social visibility; that is, the process of how social norms come to be and how they are negotiated. Carnival logic and

high-impact visuality is pervasive in uses of social media, even if Carnival is not embraced by all Trinidadians in the town and results in presenting oneself and association with different groups in varying ways. The study also has surprising results in how residents are explicitly non-activist and align themselves with everyday values of maintaining good relationships in a small town, rather than espousing more worldly or cosmopolitan values.

This book presents the proceedings of the Seventh International Conference on Management Science and Engineering Management (ICMSEM2013) held from November 7 to 9, 2013 at Drexel University, Philadelphia, Pennsylvania,

USA and organized by the International Society of Management Science and Engineering Management, Sichuan University (Chengdu, China) and Drexel University (Philadelphia, Pennsylvania, USA). The goals of the Conference are to foster international research collaborations in Management Science and Engineering Management as well as to provide a forum to present current research findings. The selected papers cover various areas in management science and engineering management, such as Decision Support Systems, Multi-Objective Decisions, Uncertain Decisions, Computational Mathematics, Information Systems, Logistics and Supply Chain Management, Relationship Management, Scheduling and Control, Data Warehousing and Data Mining, Electronic

Commerce, Neural Networks, Stochastic Models and Simulation, Fuzzy Programming, Heuristics Algorithms, Risk Control, Organizational Behavior, Green Supply Chains, and Carbon Credits. The proceedings introduce readers to novel ideas on and different problem-solving methods in Management Science and Engineering Management. We selected excellent papers from all over the world, integrating their expertise and ideas in order to improve research on Management Science and Engineering Management.

The Net Generation Has Arrived. Are you ready for it? Chances are you know a person between the ages of 11 and 30. You've seen them doing five things at once: texting friends, downloading music, uploading videos, watching a movie on a two-inch screen, and doing who-knows-what on Facebook or MySpace. They're the first generation to have literally grown up digital--and they're part of a global cultural phenomenon that's here to stay. The bottom line is this: If you understand the Net Generation, you will understand the future. If you're a Baby Boomer or Gen-Xer: This is your field guide. A

fascinating inside look at the Net Generation, Grown Up Digital is inspired by a \$4 million private research study. New York Times bestselling author Don Tapscott has surveyed more than 11,000 young people. Instead of a bunch of spoiled “screenagers” with short attention spans and zero social skills, he discovered a remarkably bright community which has developed revolutionary new ways of thinking, interacting, working, and socializing. Grown Up Digital reveals: How the brain of the Net Generation processes information Seven ways to attract and engage young talent in the workforce Seven guidelines for educators to tap the Net Gen potential Parenting 2.0: There's no place like the new home Citizen Net: How young people and the Internet are

transforming democracy Today's young people are using technology in ways you could never imagine. Instead of passively watching television, the “Net Geners” are actively participating in the distribution of entertainment and information. For the first time in history, youth are the authorities on something really important. And they're changing every aspect of our society-from the workplace to the marketplace, from the classroom to the living room, from the voting booth to the Oval Office. The Digital Age is here. The Net Generation has arrived. Meet the future.

Second Language Teaching and Learning with Technology: Views of Emergent Researchers Elsevier

The aim of this book was to present innovative applications of technology in second language teaching and learning, as well as to explore the transformation of the different techniques to different theoretical frameworks. It has also been desired to have a representation of researchers from different parts of the world as contributors. When the reviewing process was finished, there were nine selected chapters from seven different countries: Canada, Finland, France, Ireland, Spain, Sweden, and Singapore. Thus, the chapters of this book consist of the work of eleven young

researchers within the field of net-based language learning. These nine chapters all deal with topical areas of Internet-based Computer-assisted language learning (CALL). Following Notes on Contributors, Acknowledgements, and Foreword, the following papers are included in this book: (1) Introduction on Views of Emergent Researchers in L2 Teaching and Learning with Technology (Sylvie Thoušny and Linda Bradley); (2) Personal Learning Environments in Higher Education Language Courses: An Informal and Learner-Centred Approach (Ilona Laakkonen); (3) QuickAssist: Reading and Learning Vocabulary Independently with the Help of CALL and NLP Technologies (Peter Wood); (4) Self-Assessment and Tutor Assessment in Online Language Learning Materials:

Open Source Software: A Survey from 10,000 Feet provides an overview of the history, development, and applications

of open source software (OSS). OSS is software distributed with a license allowing access to its source code, free redistribution, the creation of derived works, and unrestricted use. The history of open source software can be traced back to the 1950s. Open source applications cover most areas of consumer and business software. The organization of open source development projects often differs from proprietary ones in terms of their organizational structure, membership, leadership, contribution policies and quality control. Behind a successful OSS project is its community, ranging from core developers to passive users. The key defining element of open source software is its license, which must satisfy a list of important requirements. There

are numerous open source licenses, and they mainly differ in how they treat derived software: some contain provisions that maintain its availability in open source form, while others allow more flexibility. The emergence of open source software is fueling the economy as a whole through its widespread adoption as a cheap alternative to pricey proprietary products and as a driver behind many successful e-business ventures. Open source is also directly affecting specific sectors: the software development industry through competition and new business opportunities; hardware development through lower cost and barriers of entry, consumer-led innovation and policy enforcement difficulties; academia through valuable opportunities for

research and student involvement in real-world applications, as well as the availability of software tools and the provision of pioneering new courses. It can lead to new design, production, marketing, and business models, as well as ways to develop large complex software systems in an organic manner. Challenges lie ahead, and problems still need to be overcome, so the potential for future research on OSS is large. More

important however is the ability of open source development models to democratize technology and innovation. GOLDEN COMMON LISP Binh Nguyen
