*Intelligence, Genes, and Success* Island Press

This volume demonstrates how literacy is more than learning to read and write. Literacy creates communities, organizes personal and social lives, makes possible civil society and the rule of law, and underwrites the commitment of both modern and developing societies to universal education and ever higher levels of literate competence. Everything that is involved in being and becoming literate is the concern of this interdisciplinary group of distinguished scholars.

**Artistic Research** Cambridge University Press

*Shifting Baselines* explores the real-world implications of a groundbreaking idea: we must understand the oceans of the past to protect the oceans of the future. In 1995, acclaimed marine biologist Daniel Pauly coined the term "shifting baselines" to describe a phenomenon of lowered expectations, in which each generation regards a progressively poorer natural world as normal. This seminal volume expands on Pauly's work, showing how skewed visions of the past have led to disastrous marine policies and why historical perspective is critical to revitalize fisheries and ecosystems. Edited by marine ecologists Jeremy Jackson and Enric Sala, and historian Karen Alexander, the book brings together knowledge from disparate disciplines to paint a more realistic picture of past fisheries. The authors use case studies on the cod fishery and the connection between sardine and anchovy populations, among others, to explain various methods for studying historic trends and the intricate relationships between species. Subsequent chapters offer recommendations about both specific research methods and effective management. This practical information is framed by inspiring essays by Carl Safina and Randy Olson on a personal experience of shifting baselines and the importance of human stories in describing this phenomenon to a broad public. While each contributor brings a different expertise to bear, all agree on the importance of historical perspective for effective fisheries

management. Readers, from students to professionals, will benefit enormously from this informed hindsight.

**Handbook of Intelligence** UCL Press

In the past century the borders have blurred between art and design. Designers, artists, aestheticians, curators, art and design critics, historians and students all seem confused about these borders. Figurative painting was reduced to graphic design while still being called 'art'. Figurative sculpture was reduced to nonfunctional industrial design while being called 'sculpture'. This fundamental blunder resulted from total misunderstanding of the concept of "abstraction" by the founders of modern art.

Comprehensive analysis shows that so-called "abstract art" is neither abstract nor art, but a very simple, even trivial, kind of design. In this book the prehistoric, philosophical, logical, historic and religious sources of the confusion between art and design are analyzed. A new and coherent conceptual framework is proposed, to distinguish between art and design. Nearly one hundred distinctions, contradistinctions and comparisons between art and design are presented, showing clearly that they are totally independent domains. Philosophy of art books are written by philosophers for philosophers, not for artists and designers; therefore they are irrelevant for the latter, especially for students who normally lack the necessary conceptual training. This book is not only for theoreticians but for art and design practitioners at all levels. This is a new kind of book: an illustrated philosophical book for the art and design world, which can make philosophical knowledge accessible and useful for solving real problems for designers and artists who are mostly visual rather than conceptual thinkers. The book contains over two hundred images; thus art and design people can easily follow the arguments and reasoning presented in this book in their own language; images. Lack of distinction between art and design harms both. Design is contaminated by the ills of modern art, while modern art cannot recover from its current stagnation whilst under the illusion that it is actually art rather than design.

Large-class Pedagogy Allyn & Bacon

This contributed volume serves as an authoritative reference and guide for anyone looking to study or build a brand in Africa.

Despite being touted as the 'last frontier' of global brands, very little research exists that examines brands and branding in this emerging market. Authors cover crucial topics such as the history of branding in Africa, branding approaches used by start-ups, religious organizations, political parties, and businesses in the informal economies of Africa, as well as marketing Africa as a brand using practical cases, empirical and critical approaches. With the world's youngest population and the second-fastest growing economies, Africa has quickly become a hotbed for marketing and consumption of local and global brands. While past research has mostly focused on examining the brand image of Africa and African countries, or on branding Africa as a place for tourist consumption, what is missing is a comprehensive guide that discusses the theory and practice of branding and brands in and from Africa. Through theoretical and practical contributions, the authors of this book seek to fill the knowledge gap about branding in and from Africa.

*The Cambridge Handbook of Literacy* Springer Science & Business Media

Rock art is one of the most visible and geographically widespread of cultural expressions, and it spans much of the period of our species' existence. Rock art also provides rare and often unique insights into the minds and visually creative capacities of our ancestors and how selected rock outcrops with distinctive images were used to construct symbolic landscapes and shape worldviews. Equally important, rock art is often central to the expression of and engagement with spiritual entities and forces, and in all these dimensions it signals the diversity of cultural practices, across place and through time. Over the past 150 years, archaeologists have studied ancient arts on rock surfaces, both out in the open and within caves and rock shelters, and social anthropologists have revealed how people today use art in their daily lives. The Oxford Handbook of the Archaeology and Anthropology of Rock Art showcases examples of such research from around the world and across a broad range of cultural

contexts, giving a sense of the art's regional variability, its antiquity, and how it is meaningful to people in the recent past and today - including how we have ourselves tended to make sense of the art of others, replete with our own preconceptions. It reviews past, present, and emerging theoretical approaches to rock art investigation and presents new, cutting-edge methods of rock art analysis for the student and professional researcher alike. Why do we need to communicate science? Is science, with its highly specialised language and its arcane methods, too distant to be understood by the public? Is it really possible for citizens to participate meaningfully in scientific research projects and debate? Should scientists be mandated to engage with the public to facilitate better understanding of science? How can they best communicate their special knowledge to be intelligible? These and a plethora of related questions are being raised by researchers and politicians alike as they have become convinced that science and society need to draw nearer to one another. Once the persuasion took hold that science should open up to the public and these questions were raised, it became clear that coming up with satisfactory answers would be a complex challenge. The inaccessibility of scientific language and methods, due to ever increasing specialisation, is at the base of its very success. Thus, translating specialised knowledge to become understandable, interesting and relevant to various publics creates particular perils. This is exacerbated by the ongoing disruption of the public discourse through the digitisation of communication platforms. For example, the availability of medical knowledge on the internet and the immense opportunities to inform oneself about health risks via social media are undermined by the manipulable nature of this technology that does not allow its users to distinguish between credible content and misinformation. In countries around the world, scientists, policy-makers and the public have high hopes for science communication: that it may elevate its populations educationally, that it may raise the level of sound decision-making for people in their daily lives, and that it may contribute to innovation and economic well-being. This collection of current reflections gives an insight into the issues that have to be addressed by research to reach these noble goals, for South Africa and by South Africans in particular.

This book describes the emergent nature of human culture, based on the human ability to create and pass on social codes through instruction and example. It proposes hypotheses to explain how a phenomenon that is potentially maladaptive for individuals could have evolved, and to explain why culture plays such a pervasive role in human life. It then reviews the primatological, fossil, and archaeological data to test these hypotheses.

Adam Habib, the most prominent and outspoken university official through the recent student protests, takes a characteristically frank view of the past three years on South Africa's campuses in this new book. Habib charts the progress of the student protests that erupted on Wits University campus in late 2015 and raged for the better part of three years, drawing on his own intimate involvement and negotiation with the students, and also records university management and government responses to the events. He critically examines the student movement and individual student leaders who emerged under the banners #feesmustfall and #Rhodesmustfall, and debates how to achieve truly progressive social change in South Africa, on our campuses and off. This book is both an attempt at a historical account and a thoughtful reflection on the issues the protests kicked up, from the perspective not only of a high-ranking member of university management, but also Habib as political scientist with a background as an activist during the struggle against apartheid. Habib moves between reflecting on the events of the last three years on university campuses, and reimagining the future of South African higher education. For more than a century, the study of hunting and gathering societies has been central to the development of both archaeology and anthropology as academic disciplines, and has also generated widespread public interest and debate. The Oxford Handbook of the Archaeology and Anthropology of Hunter-Gatherers provides a comprehensive review of hunter-gatherer studies to date, including critical engagements with older debates, new theoretical perspectives, and renewed obligations for greater engagement between researchers and indigenous communities. Chapters provide in-depth archaeological, historical, and anthropological case-studies, and examine far-reaching questions about human social relations, attitudes to technology, ecology, and management of resources and the environment, as well as issues of diet, health, and gender relations - all central topics in hunter-gatherer research, but also themes that have great relevance for modern global society and its future challenges. The Handbook also provides a strategic vision for how the integration of new methods, approaches, and study regions can ensure that future research into the archaeology and anthropology of hunter-gatherers will continue to deliver penetrating insights into the factors that underlie all human diversity.

[Psychoanalysis of Technoscience](#) Routledge

This book offers an accessible overview of the role sport plays in

international relations and diplomacy. Sports diplomacy has previously been defined as an old but under-studied aspect of the estranged relations between peoples, nations and states. These days, it is better understood as the conscious, strategic and ongoing use of sport, sportspeople and sporting events by state and non-state actors to advance policy, trade, development, education, image, reputation, brand, and people-to-people links. In order to better understand the many occasions where sport and diplomacy overlap, this book presents four new, interdisciplinary and theoretical categories of sports diplomacy: traditional, 'new', sport-as-diplomacy, and sports anti-diplomacy. These categories are further validated by a large number of case studies, ranging from the Ancient Olympiad to the recent appearance of esoteric, government sports diplomacy strategies, and beyond, to the activities of non-state sporting actors such as F.C. Barcelona, Colin Kaepernick and the digital world of e-sports. As a result, the landscape of sports diplomacy becomes clearer, as do the pitfalls and limitations of using sport as a diplomatic tool. This book will be of much interest to students of diplomacy, foreign policy, sports studies, and International Relations in general.

**Art as a Thinking Process** Cambridge University Press

In this book an internationally distinguished roster of contributors considers the state of the art of the discipline of archaeology at the turn of the 21st century and charts an ambitious agenda for the future. The chapters address a wide range of topics including, paradigms, practice, and relevance of the discipline; paleoanthropology; fully modern humans; holocene hunter-gatherers; the transition to food and craft production; social inequality; warfare; state and empire formation; and the uneasy relationship between classical and anthropological archaeology.

**Key Concepts for the Fashion Industry** Springer Science & Business Media

As global climate change proliferates, so too do the health risks associated with the changing world around us. Called for in the President's Climate Action Plan and put together by experts from eight different Federal agencies, *The Impacts of Climate Change on Human Health: A Scientific Assessment* is a comprehensive report on these evolving health risks, including: Temperature-related death and illness Air quality deterioration Impacts of extreme events on human health Vector-borne diseases Climate

impacts on water-related illness Food safety, nutrition, and distribution Mental health and well-being This report summarizes scientific data in a concise and accessible fashion for the general public, providing executive summaries, key takeaways, and full-color diagrams and charts. Learn what health risks face you and your family as a result of global climate change and start preparing now with *The Impacts of Climate Change on Human Health*.

**The Social Archaeology of Food** John Benjamins Publishing Reviews the evidence underpinning the Anthropocene as a geological epoch written by the Anthropocene Working Group investigating it. The book discusses ongoing changes to the Earth system within the context of deep geological time, allowing a comparison between the global transition taking place today with major transitions in Earth history.

**Sports Diplomacy** Rodopi

What is the contemporary relationship between art and thought, **Culture, Mind, and Brain** Food & Agriculture Org.

This book provides the first comprehensive introduction to, and explanation of, the theory and practice of the 'bioarchaeology of care', an original, fully theorised and contextualised case study-based approach designed to identify and interpret cases of care provision in prehistory. The applied methodology comprises four stages of analysis, each building on the content of the preceding one(s), which provide the framework for this process. Theory and Practice in the Bioarchaeology of Care is the primary source of information on this new approach and serves as a manual for its implementation. It elaborates the foundations on which the bioarchaeology of care is constructed; it leads the reader through the methodology; and it provides three detailed examples of prehistoric caregiving which illustrate how bioarchaeology of care analysis has the capacity to reveal aspects of past group and individual identity and lifeways which might otherwise have remained unknown.

*Technical guidance for the development of the growing area aspects of Bivalve Mollusc Sanitation Programmes* UCL Press

This document is the outcome of an update of the first edition of the Joint FAO and WHO Technical guidance for the development of the growing area aspects of Bivalve Mollusc Sanitation Programmes published in 2018. FAO has worked jointly with the FAO Reference Centre for Bivalve Sanitation, the UK Centre for

Environment, Fisheries and Aquaculture Science (Cefas) and Ron Lee, Cefas former employee, for the update of this document to ensure that it is still a useful tool for the development of bivalve sanitation programmes.

**Assessment and Management of Seafood Safety and Quality** Cambridge University Press

*Leading Cities* is a global review of the state of city leadership and urban governance today. Drawing on research into 202 cities in 100 countries, the book provides a broad, international evidence base grounded in the experiences of all types of cities. It offers a scholarly but also practical assessment of how cities are led, what challenges their leaders face, and the ways in which this leadership is increasingly connected to global affairs. Arguing that effective leadership is not just something created by an individual, Elizabeth Rapoport, Michele Acuto and Leonora Grcheva focus on three elements of city leadership: leaders, the structures and institutions that underpin them, and the tools used to drive change. Each of these elements are examined in turn, as are the major urban policy issues that leaders confront today on the ground. The book also takes a deep dive into one particular example of tool or instrument of city leadership – the strategic urban plan. *Leading Cities* provides a much-needed overview and introduction to the theory and practice of city leadership, and a starting point for future research on, and evaluation of, city leadership and its practice around the world.

**Rebels and Rage** Jonathan Ball Publishers

Recent neuroscience research makes it clear that human biology is cultural biology - we develop and live our lives in socially constructed worlds that vary widely in their structure values, and institutions. This integrative volume brings together interdisciplinary perspectives from the human, social, and biological sciences to explore culture, mind, and brain interactions and their impact on personal and societal issues. Contributors provide a fresh look at emerging concepts, models, and applications of the co-constitution of culture, mind, and brain. Chapters survey the latest theoretical and methodological insights alongside the challenges in this area, and describe how these new ideas are being applied in the sciences, humanities, arts, mental health, and everyday life. Readers will gain new appreciation of the ways in which our unique biology and cultural diversity shape behavior and experience, and our ongoing

adaptation to a constantly changing world.
