Kurt Baschwitz (1886-1968) had a lifelong fascination for 'the riddle of the mass' in both its visible and invisible forms. He was a major pioneer of communication and media studies on the European continent, an early student of the social, political, and mass psychology of crowds, publics, audiences, and public opinion, as well as a versatile social historian. Half a century after his death, however, he risks being forgotten and misunderstood, falling through the cracks of history.

Port work is still considered an occupation with very high accident rates. This essential code of practice, intended to replace both the second edition of the ILO Code of Practice on Safety and Health in Dock Work (1977) and the ILO Guide to Safety and Health in Dock Work (1976), provides valuable advice and assistance to all those charged with the management, operation, maintenance and development of ports and their safety. Offering many detailed technical illustrations and examples of good practice, the provisions of this code cover all aspects of port work where goods or passengers are loaded or unloaded to or from ships. It is not limited to international trade but applies equally to domestic operations, including those on inland waterways. New topics are: traffic and vehicular movements of all types; activities on shore and on ship; amended levels of lighting provision; personal protective equipment; ergonomics; provisions for disabled persons; and the specific handling of certain cargoes, for example logs, scrap metal and dangerous goods.

This book describes the future of the Artemis Lunar Program from the years 2017 to about 2030. Despite the uncertainty of the times and the present state of space exploration, it is likely that what is presented in this book will actually happen, to one degree or another. As history has taught us, predictions are often difficult, but one can see enough into the future to be somewhat accurate. As the Bible says, "Wesee thru the glass, but darkly." All of the elements of the proposed program are described from several perspectives: NASA's, the commercial space industry and our International partners. Also included are descriptions of the many vehicles, habitats, landers, payloads and experiments. The book tells the story of the buildup of a very small space station in a strange new lunar orbit and the descent of payloads and humans, including the first women and next man, to the lunar surface with the intent to evolve a sustained presence over time.

**Business User Guide** Mercury Learning and Information

This book contains unique, firsthand experiences of both the military and civilian actors involved in civil-military interaction processes. It presents lessons learned from a variety of situations, from both NATO-led operations and UN Integrated Missions, and in different geographical areas, such as the Balkans, Iraq, Afghanistan and Africa. Rather than taking the improvisational approach, these lessons learned will enable military commanders and staff and their civilian counterparts in governments, International Organisations and NGOs to come fully prepared for the challenges of today's multifaceted missions. With a better understanding of the mandates and methods of the various civilian and military actors comes greater respect for each other's comparative advantages. With respect comes smoother cooperation. And with that, efficiency gains and enhanced overall mission effectiveness. Each chapter contains solid analysis and advice, specific to the functions found in military organizations, from Intelligence to Personnel and from Logistics to Engineering. Cross-cutting themes like Gender, Human Rights and Corruption are also included in this work that brings together some of the best that practitioners and academics can offer.

Mobility is fundamental to economic and social activities such as commuting, manufacturing, or supplying energy. Each movement has an origin, a potential set of intermediate locations, a destination, and a nature which is linked with geographical attributes. Transport systems composed of infrastructures, modes and terminals are so embedded in the socio-economic life of individuals, institutions and corporations that they are often invisible to the consumer. This is paradoxical as the perceived invisibility of transportation is derived from its efficiency. Understanding how mobility is linked with geography is main the purpose of this book. The third edition of The Geography of Transport Systems has been revised and updated to provide an overview of the spatial aspects of transportation. This text provides greater discussion of security, energy, green logistics, as well as new and updated case studies, a revised content structure, and new figures. Each chapter covers a specific conceptual dimension including networks, modes, terminals, freight transportation, urban transportation and environmental impacts. A final chapter contains core methodologies linked with transport geography such as accessibility, spatial interactions, graph theory and Geographic Information Systems for transportation (GIS-T). This book provides a comprehensive and accessible introduction to the field, with a broad overview of its concepts, methods, and areas of application. The accompanying website for this text contains a useful additional material, including digital maps, PowerPoint slides, databases, and links to further reading and websites. The website can be accessed at: <http://people.hofstra.edu/geotrans> This text is an essential resource for undergraduates studying transport geography, as well as those interest in economic and urban geography, transport planning and engineering.
