Adverse Impact SAGE Publications
 AUDIBLE EDITOR'S PICK A paradigm-shifting study of neurodivergent women—those with ADHD, autism, synesthesia, high sensitivity, and sensory processing disorder—exploring why these traits are overlooked in women and how society benefits from allowing their unique strengths to flourish. As a successful Harvard and Berkeley-educated writer, entrepreneur, and devoted mother, Jenara Nerenberg was shocked to discover that her “symptoms”—only ever labeled as anxiety—were considered autistic and ADHD. Being a journalist, she dove into the research and uncovered neurodiversity—a framework that moves away from pathologizing “abnormal”

versus “normal” brains and instead recognizes the vast diversity of our mental makeups. When it comes to women, sensory processing differences are often overlooked, masked, or mistaken for something else entirely. Between a flawed system that focuses on diagnosing younger, male populations, and the fact that girls are conditioned from a young age to blend in and conform to gender expectations, women often don’t learn about their neurological differences until they are adults, if at all. As a result, potentially millions live with undiagnosed or misdiagnosed neurodivergences, and the misidentification leads to depression, anxiety, low self-esteem, and shame. Meanwhile, we all miss out on the gifts their neurodivergent minds have to offer. Divergent Mind is a long-overdue, much-needed answer for women who have a deep sense that they are “different.”

Sharing real stories from women with high sensitivity, ADHD, autism, misophonia, dyslexia, SPD and more, Nerenberg explores how these brain variances present differently in women and dispels widely-held misconceptions (for example, it’s not that autistic people lack sensitivity and empathy, they have an overwhelming excess of it). Nerenberg also offers us a path forward, describing practical changes in how we communicate, how we design our surroundings, and how we can better support divergent minds. When we allow our wide variety of brain makeups to flourish, we create a better tomorrow for us all.

This book is a concrete solution to the challenges in developing higher education in Indonesia. The proposed perspectives and ideas are ideal to be developed by

teachers and lecturers in their own classroom. The two best parts of this book are (1) how the educators, especially in universities, should form critical thinking habit in their classroom through respectful and scholarly discussion; and (2) how universities should become the centre of 'teaching for learning'. Those are vital as educating today's students is our best investment to develop their willingness of life-long learning and the ability of critical thinking. In the future, these students will determine the fate of Indonesia.

Therefore, let's empower higher education in Indonesia by applying the constructive suggestions proposed in this book.

Design for a Better Future Corwin Press

This book introduces a new speculative design process for inclusive new product development (NPD). The authors offer Vision Enabled Design Thinking (VEDT), a human-centered technological design framework incorporating the use of Design Lens and Vision Concepting, as a way for the designer to ideate and reflect on product development concepts within a deeper sociocultural context. The authors incorporate project management concepts into the overall design process through the development of a new design process, "4-D Algorithm for New Product Development." Inclusion by Design: Future Thinking Approaches to New Product Development formalizes the use of speculative design as a means for more inclusive NPD and promotes management of the design process as a needed skill for future engineers and designers. It provides a novel design methodology of VEDT for engaging vision concepting, through the use of Design Lenses in engaging speculative design practices and offers an implementation framework to support the sustainable adoption and use of future design methods. The 4-D Algorithm for New Product Development promotes inclusivity in design while addressing practical aspects of managing the design process in today's corporate business environment. Those involved with interactive product and technology design, new product development, design researchers and managers, engineers, as well as professionals and graduate students will find this book useful.

This book explores the ways that disciplinary convergence and technological advance are transforming systems engineering to address gaps in complex systems engineering: Transdisciplinary Systems Engineering (TSE). TSE reaches beyond traditional disciplines to find connections—and this book examines a range of new methods from across such disparate areas of scholarship as computer science, social science, human studies, and systems design to reveal patterns, efficiencies, affordances, and pathways to intuitive design. Organized to serve multiple constituencies, the book stands as an ideal textbook supplement for graduate courses in systems engineering, a reference text for program managers and practicing engineers in all industries, and a primary source for researchers engaged in multidisciplinary research in systems engineering and design.

The Palgrave Encyclopedia of the Possible represents a comprehensive resource for researchers and practitioners interested in an emerging multidisciplinary area within psychology and the social sciences: the study of how we engage with and cultivate the possible within self, society and culture. Far from being opposed either to the actual or the real, the possible engages with concrete facts and experiences, with the result of transforming them. This encyclopedia examines the notion of the possible and the concepts associated with it from standpoints within psychology, philosophy, sociology, neuroscience and logic, as well as multidisciplinary fields of research including anticipation studies, future studies, complexity theory and creativity research. Presenting multiple perspectives on the possible, the authors consider the distinct social, cultural and psychological processes - e.g., imagination, counterfactual thinking, wonder, play, inspiration, and many others - that define our engagement with new possibilities in domains as diverse as the arts, design and business.

This text is the best single repository for a comprehensive examination of the scientific research and practical issues associated with adverse impact. Adverse impact occurs when there is a significant difference in organizational outcomes to the disadvantage of one or more groups defined on the basis of demographic characteristics such as race, ethnicity, gender, age, religion, etc. This book shows, based on scientific research, how to design selection systems that minimize subgroup differences. The primary object of this volume in the SIOP series is to bring together renowned experts in this field to present their viewpoints and perspectives on what underlies adverse impact, where we are in terms of assessing it and what we may have learned (or not learned)

about minimizing it.

Creativity in Engineering Oswaal Books
Process Oriented Guided Inquiry Learning (POGIL) is a pedagogy that is based on research on how people learn and has been shown to lead to better student outcomes in many contexts and in a variety of academic disciplines. Beyond facilitating students' mastery of a discipline, it promotes vital educational outcomes such as communication skills and critical thinking. Its active international community of practitioners provides accessible educational development and support for anyone developing related courses. Having started as a process developed by a group of chemistry professors focused on helping their students better grasp the concepts of

general chemistry, The POGIL Project has grown into a dynamic organization of committed instructors who help each other transform classrooms and improve student success, develop curricular materials to assist this process, conduct research expanding what is known about learning and teaching, and provide professional development and collegiality from elementary teachers to college professors. As a pedagogy it has been shown to be effective in a variety of content areas and at different educational levels. This is an introduction to the process and the community. Every POGIL classroom is different and is a reflection of the uniqueness of the particular context - the institution, department, physical space, student body, and instructor - but follows a common structure in which students work cooperatively in self-managed small groups of three or four. The group work is focused on activities that are carefully designed and scaffolded to enable students to develop important concepts or to deepen and refine their understanding of those ideas or concepts for themselves, based entirely on data provided in class, not on prior reading of the textbook or other introduction to the topic. The learning environment is structured to support the development of process skills -- such as teamwork, effective communication, information processing, problem solving, and critical thinking. The instructor's role is to facilitate the development of student concepts and process skills, not to simply deliver content to the students. The first part of this book introduces the theoretical and philosophical foundations of POGIL pedagogy and summarizes the literature demonstrating its efficacy. The second part of the book focusses on implementing POGIL, covering the formation and effective management of student teams, offering guidance on the selection and writing of POGIL activities, as well as on facilitation, teaching large classes, and assessment. The book concludes with examples of implementation in STEM and non-STEM disciplines as well as guidance on how to get started. Appendices provide additional resources and information about The POGIL Project.

Handbook of Organizational Creativity Academic Press

This book explores the complex, yet critical, relationship between technology and creativity, specifically in educational contexts. Creativity is important for success in today's rapidly changing, radically contingent and hyperconnected world. This is even more relevant in the context of teaching and learning—where

the psychological, sociological and cultural aspects of human learning confront the challenges of a rapidly changing, technologically saturated world. Written by some of the foremost thinkers and researchers in the area of creativity and/or technology, the chapters in this volume examine the impact of recent and future technologies on creativity, teaching and learning. Individually and collectively, they help us develop an understanding of this nexus of creativity and technology for education. They offer new perspectives on this rapidly evolving future—exploring issues, paradoxes, tensions, and points of interest for creativity and technology. They position these issues in ways that consider implications for thinking, learning, teaching, and education in general.

Creativity is like an iceberg - the resulting new idea, or novel solution is only 10% of the effort. The other 90% is the complex interplay of thinking skills and strategies, personal and motivational properties that activate these skills and strategies, and the social and organizational factors of the environment that influence the creative process. Creativity in Engineering focuses on the Process, Person, Product, and Place to understand when and why creativity happens in the engineering environment and how it can be further encouraged.
