[The Canadian System of Soil Classification](#) Springer Science & Business Media

"This spectacular book does full justice to the Compositae (Asteraceae), the largest and most successful flowering plant family with some 1700 genera and 24,000 species. It is an indispensable reference, providing the most up-to-date hypotheses of phylogenetic relationships in the family based on molecular and morphological characters, along with the corresponding subfamilial and tribal classification. The 2009 work not only integrates the extensive molecular phylogenetic analyses conducted in the last 25 years, but also uses these to produce a metatree for about 900 taxa of Compositae. The book contains 44 chapters, contributed by 80 authors, covering the history, economic importance, character variation, and systematic and phylogenetic diversity of the family. The emphasis of this work is phylogenetic; its chapters provide a detailed, current, and thoroughly documented presentation of the major (and not so major) clades in the family, citing some 2632 references. Like the Compositae, the book is massive, diverse, and fascinating. It is beautifully illustrated, with 170 figures, and an additional 108 cladograms (all consistently color-coded, based on the geographic range of the included taxa); within these figures are displayed 443 color photographs, clearly demonstrating the amazing array of floral and vegetative form expressed by members of the clade." --NHBS Environment Bookstore.

Privatization John Wiley & Sons

Dick Popkin and James Force have attended a number of recent conferences where it was apparent that much new and important research was being done in the fields of interpreting Newton's and Spinoza's contributions as biblical scholars and of the relationship between their biblical scholarship and other aspects of their particular philosophies. This collection represents the best current research in this area. It stands alone as the only work to bring together the best current work on these topics. Its primary audience is specialised scholars of the thought of Newton and Spinoza as well as historians of the philosophical ideas of the late seventeenth and early eighteenth centuries.

The Books of Nature and Scripture Cambridge University Press

The Anthropocene is a major new concept in the Earth sciences and this book examines the effects on geomorphology within this

period. Drawing examples from many different global environments, this comprehensive volume demonstrates that human impact on landforms and land-forming processes is profound, due to various driving forces, including: use of fire; extinction of fauna; development of agriculture, urbanisation, and globalisation; and new methods of harnessing energy. The book explores the ways in which future climate change due to anthropogenic causes may further magnify effects on geomorphology, with respect to future hazards such as floods and landslides, the state of the cryosphere, and sea level. The book concludes with a consideration of the ways in which landforms are now being managed and protected. Covering all major aspects of geomorphology, this book is ideal for undergraduate and graduate students studying geomorphology, environmental science and physical geography, and for all researchers of geomorphology.

Contributions to the Natural History of the Cetaceans. a Review of the Family Delphinidae Princeton University Press

This volume investigates how urban growth and prosperity transformed the cities of the Roman Mediterranean in the last centuries BCE and the first centuries CE, integrating debates about Roman urban space with discourse on Roman urban history. The contributions explore how these cities developed landscapes full of civic memory and ritual, saw commercial priorities transforming the urban environment, and began to expand significantly beyond their wall circuits. These interrelated developments not only changed how cities looked and could be experienced, but they also affected the functioning of the urban community and together contributed to keeping increasingly complex urban communities socially cohesive. By focusing on the transformation of urban landscapes in the Late Republican and Imperial periods, the volume adds a new, explicitly historical angle to current debates about urban space in Roman studies. Confronting archaeological and historical approaches, the volume presents developments in Italy, Africa, Greece, and Asia Minor, thus significantly broadening the geographical scope of the discussion and offering novel theoretical perspectives alongside well-documented, thematic case studies. Urban Space and Urban History in the Roman World will be of interest to anyone working on Roman urbanism or Roman history in the Late Republic and early Empire.

American Paintings of the Nineteenth Century OUP Oxford

This volume gathers the harvest of recent doctoral dissertations on South Asia, principally from North America and Western Europe, but exclusive of theses from universities in South Asia itself. The yield—1305 dissertations based on research carried out during the early and middle nineteen-sixties and brought to completion between 1966 and 1970—is even greater than one

would have guessed, eloquent testimony to the expansion of South Asian studies in the West over the last decade. Doctoral Dissertations on South Asia seeks to be a comprehensive compilation of recently completed theses dealing in whole or in part with the former civilizations and the contemporary affairs of Ceylon, India, Nepal and Pakistan. At the same time, this work provides striking testimony of the dynamic growth of Asian Studies outside the subcontinent and particularly in the United States, Great Britain, Germany and France, where most of the major centers of scholarship are presently found. It is an interdisciplinary work covering the natural sciences as well as the humanities and social sciences.

Catalog of Living Whales Routledge

This volume presents case studies of Iron Age rural settlement from across Europe illustrating both the diversity of patterns in the evidence and common themes.

Religion and Society in Arab Sind Springer Science & Business Media

The energy and optimism of the new nation are apparent in this catalogue, which features John Singleton Copley's The Copley Family and Gilbert Stuart's portraits of the first five presidents. Previously unpublished documents and infrared reflectograms shed new light on Benjamin West's Colonel Guy Johnson and Karonghyontye (Captain David Hill), Copley's Watson and the Shark, and Edward Savage's Washington Family.

Christopher Columbus and the Participation of the Jews in the Spanish and Portuguese Discoveries University of California Press

This new edition of *Invasion Ecology* provides a comprehensive and updated introduction to all aspects of biological invasion by non-native species. Highlighting important research findings associated with each stage of invasion, the book provides an overview of the invasion process from transportation patterns and causes of establishment success to ecological impacts, invader management, and post-invasion evolution. The authors have produced new chapters on predicting and preventing invasion, managing and eradicating invasive species, and invasion dynamics in a changing climate. Modern global trade and travel have led to unprecedented movement of non-native species by humans with unforeseen, interesting, and occasionally devastating consequences. Increasing recognition of the problems associated with invasion has led to a rapid growth in research into the dynamics of non-native species and their adverse effects on native biota and human economies. This book provides a synthesis of this fast growing field of research and is an essential text for undergraduate and graduate students in ecology and conservation management. Additional resources are available at www.wiley.com/go/invasionecology

Geomorphology in the Anthropocene Sagwan Press

The Wiley Blackwell Companion to Political Geography aims to account for the intellectual and worldly developments that have taken place in and around political geography in the last 10 years. Bringing together established names in the field as well as new scholars, it highlights provocative theoretical and conceptual debates on political geography from a range of global perspectives. Discusses the latest developments and places increased emphasis on modes of thinking, contested key concepts, and on geopolitics, climate change and terrorism. Explores the influence of the practice-based methods in geography and concepts including postcolonialism, feminist geographies, the notion of the Anthropocene, and new understandings of the role of non-human actors in networks of power. Offers an accessible introduction to political geography for those in allied fields including political science, international relations, and sociology.

An Appeal in Favor of that Class of Americans Called Africans
Histoire Géographie EMC 3e cycle 4

One of a series of systematic catalogues of the National Gallery of Art's collection, this comprehensive volume discusses in detail 310 objects that comprise one of the world's outstanding repositories of American naive paintings. Works by renowned folk artists such as Edward Hicks, Erastus Salisbury Field, and Ammi Phillips are represented in depth and placed in stylistic as well as historical context. This catalogue is an indispensable tool for historians of American painting and folk art, and for students of American life and culture. Thorough documentation and commentary are provided for the first time on some of the most intriguing images produced in America in the past two hundred years.

"History of Pontic Greeks (from the Black Sea region) and a history of the Topalidis and Papadopoulos Family from Turkey to Georgia to Greece and finally to Australia." -- Provided by

publisher.

Most Ancient Egypt OUP Oxford

In prehistoric societies children comprised 40–65% of the population, yet by default, our ancestral landscapes are peopled by adults who hunt, gather, fish, knap tools, and make art. But these adults were also parents, grandparents, aunts, and uncles who had to make space physically, emotionally, intellectually, and cognitively for the infants, children, and adolescents around them. *Growing Up in the Ice Age* is a timely and evidence-based look at the lived lives of Paleolithic children and the communities of which they were a part. By rendering these 'invisible' children visible, readers will gain a new understanding of the Paleolithic period as a whole, and in doing so will learn how children have contributed to the biological and cultural entities we are today. *Systematics, Evolution, and Biogeography of Compositae* Walter de Gruyter GmbH & Co KG

This catalog was originally designed as a checklist of the cetaceans of South American waters only. It was clear from the start, however, that comparable limitations could not be imposed on the range of the literature to be consulted. With nearly all the essential literature at hand, it was decided to include the extraterritorial forms and make a catalog worldwide in scope. *Urban Space and Urban History in the Roman World* Cambridge University Press

The book has no illustrations or index. It may have numerous typos or missing text. However, purchasers can download a free scanned copy of the original rare book from the publisher's website (GeneralBooksClub.com). You can also preview excerpts of the book there. Purchasers are also entitled to a free trial membership in the General Books Club where they can select from more than a million books without charge. Egyptian Grammar John Wiley & Sons

Fjords are deep, glacially carved estuaries that are peculiar to certain coastlines, and have several characteristics that distinguish them from shallower embayments. At higher latitudes they indent the western coastlines of Scandinavia, North and South America, and New Zealand. They are also a common

feature of much of the arctic coastline. The papers contained in this volume were presented at a workshop funded by the NATO Advanced Studies Institute in Victoria, British Columbia. It may seem curious to the reader that this special class of estuaries should have attracted an international gathering of oceanographers from several different disciplines. The reason for this interest stems from both practical and scientific considerations. On the one hand, fjords are a feature common to the coastlines of several countries that depend heavily on the oceans for communication, fisheries and other resources. The impact of man's activities on these coasts has created a demand for new knowledge of the physical, biological and chemical aspects of fjords. Sometimes man's influence on the ocean is intentional as, for example, in the artificial control of ice cover; often it is the more insidious build-up of toxic wastes that is of concern. These problems are particularly acute where the conflicting demands of fisheries, industrial development and recreation meet in a single fjord; and indeed, this is a common occurrence along several of the fjords in Scandinavia and Canada.
