MATHIAS ANNA

Mysteries of the Deep BBC Books

Is there a shark movie that is scarier than Jaws? What is the sneaky secret hidden in the Loch Ness monster's name? How did the Gill-man in Creature from the Black Lagoon become a romantic hero? Do mermaids count as sea monsters? What terrifying sea creature was discovered to really exist, and just what on earth is a globster? From Kraken to kaiju, Open Water to The Shallows, monsters of the deep have fascinated and horrified us for centuries. There's even a name for the fear of deep bodies of water: thalassophobia. Humans have a natural fear of predators in the water, and yet we just can't stop thinking about them! There are a lot of deep water monster movies out there; good, bad, strange and 'so bad it's good'. This book has collected some of the best, worst and most interesting out there to tell you about. If you ever wanted to know your crocodile from your Cthulhu and find out how they make the monsters come alive, whether you like your monsters in the ocean or in lakes, based on real animals or totally made up, with fins or tentacles, one head

or five, if you love your movie monsters of the deep then this book was written for you.

Our Planet Penguin

Features the photography of Annie Crawley, an innovative book and dvd pack that discovers the underwater world, fun facts and tidbits.

English Unlimited Upper Intermediate B Combo with DVD-ROMs (2) Houghton Mifflin Harcourt

Named 2013 Outstanding Science Trade Book for Students K-12 by the National Science Teachers Association and the Children's Book Council. Appealing to children over age ten, this engaging reference book depicts adventurous and thrilling elements in oceanographic fieldwork. In conjunction with a National Geographic television show, this book will reach a huge audience of marine lovers, as well as children interested in science and exploration. Alien Deep outshines the competition by following a recent, specific deepwater exploration that illuminates new knowledge about our oceans. Following alongside a current expedition, Alien Deep will enable children to observe the processes involved in marine exploration. As scientists delve into the mysterious depths of the ocean, children will be able to

witness the excitement of scientific exploration and discovery through enriching text and stunning photography. By describing a recent exploration, children will be able to read and see the new methods and technology that oceanographers use to conduct research.

[Ocean Life from A to Z](#) National Geographic Books

This unique tie-in to the major motion picture "Oceans"--presented by Disney & "National Geographic"--explores the health of the oceans, and reveals what people can do to improve the health of our seas.

Jacques Perrin Presents Oceans New World Library

From StacyPlays, the YouTube sensation with over 2 million subscribers, comes the exhilarating fourth and final book in her Minecraft-inspired adventure series about a girl raised by wolves. After barely surviving the harsh tundra biome, Stacy has finally discovered the origins of the intelligent, playful wolves who've raised her. But will Stacy be able to decode a mysterious diary that may hold the keys to her future in the taiga? As she races against time to uncover the secrets buried within the diary's pages, Stacy and her pack set out on a new thrilling adventure across biomes. Will they beat the clock and make it to the farthest reaches of their world: the deep ocean? As they dive deeper into the unknown, Stacy and the wolves learn that the deep ocean may hold the biggest secret yet. Stacy's wolves might not be as alone in this world as they once thought. Fans of Minecraft: The Crash and PopularMMOs Presents: A Hole New World will love this thrilling conclusion to the illustrated, action-packed series!

Oceans Cambridge University Press

The riveting story of the exploration of the final frontier of our planet—the deep ocean—and history-making mission to reach the bottom of all five seas. Humankind has explored every continent on earth, climbed its tallest mountains, and gone into space. But the largest areas of our planet remain largely a mystery: the deep oceans. At over 36,000 feet deep, there areas closest to earth's core have remained nearly impossible to reach—until now. Technological innovations, engineering breakthroughs and the derring-do of a team of explorers, led by explorer Victor Vescovo, brought together an audacious global quest to dive to the deepest points of all five oceans for the first time in history. The expedition pushed technology to the limits, mapped hidden landscapes, discover previously unknown life forms and began to piece together how life in the deep oceans affects our planet—but it was far from easy. Expedition Deep Ocean is the inside story of this exploration of one of the most unforgiving and mysterious places on our planet, including the site of the Titanic wreck and the little-understood Hadal Zone. Vescovo and his team would design the most advanced deep-diving submersible ever built, where the pressure on the sub is 8 tons per square inch—the equivalent of having 292 fueled and fully loaded 747s stacked on top of it. And then there were hurricane-laden ocean waters and the byzantine web of global oceanography politics. Expedition Deep Ocean reveals the marvelous and other-worldly life found in all five deep ocean trenches, including several new species that have posed as of yet unanswered questions about survival and migration from ocean to ocean. Then there are the newly discovered sea mounts that cause tsunamis when they are broken by shifting subduction plates and jammed back into the earth crust, something that can now be studied to predict future disasters. Filled with high drama, adventure and the thrill of discovery, Expedition Deep Ocean celebrates courage and ingenuity and reveals the majesty and meaning of the deep ocean.

Movie Monsters of the Deep Grand Central Publishing

Too poor to pay his pregnant wife's hospital bill, Vannak Anan

Prum left his village in Cambodia to seek work in Thailand. Men who appeared to be employers on a fishing vessel promised to return him home after a few months at sea, but instead Vannak was hostages on the vessel for four years of hard labor. Amid violence and cruelty, including frequent beheadings, Vannak survived in large part by honing his ability to tattoo his shipmates—a skill he possessed despite never having been trained in art or having had access to art supplies while growing up. As a means of escape, Vannak and a friend jumped into the water and, hugging empty fish-sauce containers because they could not swim, reached Malaysia in the dark of night. At the harbor, they were taken into a police station . . . then sold by their rescuers to work on a plantation. Vannak was kept as a laborer for over a year before an NGO could secure his return to Cambodia. After five years away, Vannak was finally reunited with his family. Vannak documented his ordeal in raw, colorful, detailed illustrations, first created because he believed that without them no one would believe his story. Indeed, very little is known about what happens to the men and boys who end up working on fishing boats in Asia, and these images are some of the first records. In regional Cambodia, many families still wait for men who have disappeared across the Thai border, and out to sea. The Dead Eye and the Deep Blue Sea is a testament to the lives of these many fishermen who are trapped on boats in the Indian Ocean.

[Alien Deep](#) Little, Brown Books for Young Readers

A personal view of 70 years of looking at the natural world. This is Sir David looking at the wildlife that has captured his imagination and enthusiasm over his distinguished career.

Prowling the Seas Bloomsbury Publishing

Acclaimed as "the premier chronicler of America's complex relationship with our oceans" (Honolulu Weekly), David Helvarg has also been a war correspondent, investigative journalist, documentary producer, and private investigator. The one constant in his adventurous life has been love for the sea. His personal story of love, loss, and redemption, *Saved by the Sea* is also a profound, startling, and sometimes funny reflection on the state of our seas and the intimate ways in which our lives are linked to the natural world around us.

The Blue Planet National Geographic Books

Goodreads Choice Award Winner for Best Science & Technology Book of the Year In this scientifically informed account of the changes occurring in the world over the last century, award-winning broadcaster and natural historian shares a lifetime of wisdom and a hopeful vision for the future. See the world. Then make it better. I am 93. I've had an extraordinary life. It's only now that I appreciate how extraordinary. As a young man, I felt I was out there in the wild, experiencing the untouched natural world - but it was an illusion. The tragedy of our time has been happening all around us, barely noticeable from day to day -- the loss of our planet's wild places, its biodiversity. I have been witness to this decline. A Life on Our Planet is my witness statement, and my vision for the future. It is the story of how we came to make this, our greatest mistake -- and how, if we act now, we can yet put it right. We have one final chance to create the perfect home for ourselves and restore the wonderful world we inherited. All we need is the will to do so.

[Life Stories](#) Regnery Gateway

Earth. The Final Frontier Contrary to popular belief, Earth is not an insignificant blip on the universe's radar. Our world proves anything but average in Guillermo Gonzalez and Jay W. Richards' *The Privileged Planet: How Our Place in the Cosmos Is Designed for Discovery*. But what exactly does Earth bring to the table? How does it prove its worth among numerous planets and constellations in the vastness of the Milky Way? In *The Privileged*

Planet, you'll learn about the world's life-sustaining capabilities, water and its miraculous makeup, protection by the planetary giants, and how our planet came into existence in the first place.

Blue Planet II Random House

A lavish and definitive view of the oceanic world - accompanying the landmark 7-part BBC series narrated by Sir David Attenborough. With over 200 breath-taking photographs and stills from the BBC Natural History Unit's spectacular footage, this awe-inspiring study of life below the surface will amaze and enthrall. 'Jaw-dropping' - Variety 'Substantial and awe-inspiring' - Publishers Weekly 'Breath-taking' -- ***** Reader review 'An incredible book and a must buy' -- ***** Reader review 'Outstanding' -- ***** Reader review

***** Take a deep breath and dive into the mysteries of the ocean... Our understanding of ocean life has changed dramatically in the last decade, with new species, new behaviours, and new habitats being discovered at a rapid rate. *Blue Planet II*, which accompanies the epic BBC 7-part series, is a ground-breaking new look at the richness and variety of underwater life across our planet. From ambush hunters such as the carnivorous bobbit worm to cuttlefish mesmerising their prey with a pulsating light display, *Blue Planet II* reveals the never-before-seen secrets of the ocean. With over 200 breath-taking photographs and stills from the BBC Natural History Unit's spectacular footage, each chapter of *Blue Planet II* brings to life a different habitat of the oceanic world. As well as shining a light on ocean life, coral reef and arctic ice communities and shoreline existence, *Blue Planet II* examines unflinchingly what the future holds for our ocean dwellers. It's a book that will amaze, educate, captivate and astound.

Saved by the Sea Barefoot Books

This official companion volume to the new 3-D IMAX film from the Academy Award(-winning director of "Titanic" is filled with detailed, large-format photographs that take readers to the depths of the ocean to probe the mysteries of life on Earth--and in outer space. Full color.

Expedition Deep Ocean Simon and Schuster

From the surface of the ocean, it's hard to see any visible signs of life below. But this remarkable ecosystem is teeming with life—life that is increasingly under environmental stress. And it is often the predators that sound the earliest warning signs. By tracking a wide variety of ocean predators, the Tagging of Pacific Predators (TOPP) project provides essential cutting-edge information about the state of the ocean's health and the challenges facing all its inhabitants. Acclaimed science writer Pamela S. Turner takes readers along with four predators—a leatherback sea turtle, a bluefin tuna, a great white shark, and a Sooty Shearwater—on their remarkable journeys. This full-access look will change the way readers view our blue planet.

Deep-Sea Fishes Bloomsbury Publishing USA

Ocean Planet is the stunning new book from natural-history illustrator Ben Rothery - and offers a rich exploration of the creatures from the coastal and offshore waters of the world - from penguins, seagulls, polar bears and seahorses, to plankton, sharks

A Hole in the Bottom of the Sea Cambridge University Press

A Silent Spring for oceans, written by "the Rachel Carson of the fish world" (The New York Times) Who can forget the sense of wonder with which they discovered the creatures of the deep? In this vibrant hymn to the sea, Callum Roberts—one of the world's foremost conservation biologists—leads readers on a fascinating tour of mankind's relationship to the sea, from the earliest traces of water on earth to the oceans as we know them today. In the process, Roberts looks at how the taming of the oceans has

shaped human civilization and affected marine life. We have always been fish eaters, from the dawn of civilization, but in the last twenty years we have transformed the oceans beyond recognition. Putting our exploitation of the seas into historical context, Roberts offers a devastating account of the impact of modern fishing techniques, pollution, and climate change, and reveals what it would take to steer the right course while there is still time. Like *Four Fish* and *The Omnivore's Dilemma*, *The Ocean of Life* takes a long view to tell a story in which each one of us has a role to play.

The Beast of Bites White Owl

There's so much we don't know about what lies deep beneath the ocean's surface - and the time to find out is growing increasingly precious . . . Professor Alex Rogers is one of the world's leading experts in marine biology and oceanology, and has spent his life studying the deep ocean - and in particular the impact of human activity on the ecosystems of the oceans. In this timely, galvanising and fascinating book - replete with stunning photography of strange and beautiful creatures - Professor Rogers offers a fundamentally optimistic view of humanity's relationship with the oceans - and also a very personal account of his own interaction with the seas.

Life on an Ocean Planet Seven Stories Press

Ours is a watery planet, with two-thirds of its surface made up of water. Yet few places on Earth retain their secrets as well as oceans. Beyond the shorelines lies a largely undiscovered world, with its secrets only just beginning to be revealed. *The Blue Planet* explores this fascinating environment in all its variety, from the apparent 'desert' of the open ocean to the abyssal depths where monstrous creatures lurk in the darkness. *The Blue Planet* is divided into seven chapters, each focusing on a single habitat, which combine to form a comprehensive guide to the world's oceans. A series of smaller, specialist-interest books associated with *The Blue Planet* are being published simultaneously which each take an in-depth look at particular marine animals.

A Life on Our Planet National Geographic

Ready for a wondrous celestial journey? This extraordinary book puts you right there in the middle of our solar system: breaking through colorful gaseous hazes; exploring the surface of red-hot or ice-cold planets; hurtling through rings of flying, frozen ice chunks; and rocketing on out to deep space. Astronomer David Aguilar is our navigator on these seven wonderful trips through space—journeys that someday may actually happen!

Ocean Planet National Geographic Kids

In 1952, at age sixteen, Sylvia Earle—then a budding marine biologist—borrowed a friend's copper diving helmet, compressor, and pump and slipped below the waters of a Florida river. It was her first underwater dive. Since then, Earle has descended to more than 3,000 feet in a submersible and, despite beginning at a time when few women were taken seriously as marine scientists, has led or participated in expeditions totaling more than 7,000 hours underwater, and counting. Equal parts memoir, adventure tale, and call to action, *Sea Change: A Message of the Oceans* has become a classic of environmental literature, at once the gripping adventure story of Earle's three decades of undersea exploration, an insider's introduction to the dynamic field of marine biology, and an urgent plea for the preservation of the world's fragile and rapidly deteriorating ocean ecosystems. Featuring a gallery of color photographs and a new preface by Earle, this new edition of *Sea Change* arrives at a uniquely pivotal time when its message is needed more than ever before. She writes, "I want to share the exhilaration of discovery, and convey a sense of urgency about the need for all of us to use whatever talents and resources we have to continue to explore and

understand the nature of this extraordinary ocean planet.” Her

message is clear: how we treat the oceans now will determine the future health of the planet—and our species.
