**An Environmental History of the Civil War** Walter de Gruyter GmbH & Co KG

This is a study of the official records of the Union and the Confederate armies, of diaries, memoirs, and reminiscences of participants in the war, which reveal the existence of much disaffection in every state with the Confederacy. Many of the disaffected formed into bands professing loyalty to the Union. The author attempts to discover the causes of this movement, the classes that participated in it, and the purposes and work of the organization. Originally published in 1934. A UNC Press Enduring Edition -- UNC Press Enduring Editions use the latest in digital technology to make available again books from our distinguished backlist that were previously out of print. These editions are published unaltered from the original, and are presented in affordable paperback formats, bringing readers both historical and cultural value.

In the Shenandoah Valley and Peninsula Campaigns of 1862, Union and Confederate soldiers faced unfamiliar and harsh environmental conditions--strange terrain, tainted water, swarms of flies and mosquitoes, interminable rain and snow storms, and oppressive

If one is to believe contemporary historians, the South never had a chance. Many allege that the Confederacy lost the Civil War because of internal

division or civilian disaffection; others point to flawed military strategy or ambivalence over slavery. But, argues distinguished historian Gary Gallagher, we should not ask why the Confederacy collapsed so soon but rather how it lasted so long. In *The Confederate War* he reexamines the Confederate experience through the actions and words of the people who lived it to show how the home front responded to the war, endured great hardships, and assembled armies that fought with tremendous spirit and determination. Gallagher's portrait highlights a powerful sense of Confederate patriotism and unity in the face of a determined adversary. Drawing on letters, diaries, and newspapers of the day, he shows that Southerners held not only an unflagging belief in their way of life, which sustained them to the bitter end, but also a widespread expectation of victory and a strong popular will closely attuned to military events. In fact, the army's "offensive-defensive" strategy came remarkably close to triumph, claims Gallagher—in contrast to the many historians who believe that a more purely defensive strategy or a guerrilla resistance could have won the war for the South. To understand why the South lost, Gallagher says we need look no further than the war itself: after a long struggle that brought enormous loss of life and property, Southerners finally realized that they had been beaten on the battlefield. Gallagher's interpretation of the Confederates and their cause boldly challenges current historical thinking and invites readers to reconsider their own conceptions of the American Civil War.

This edition is not just a rehash of old, albeit classic and still important, stuff. Instead, it provides a fresh perspective on a topic of perennial interest for those working in the field that has been variously called training and development, human resource development, performance technology, and workplace learning and performance. The fresh perspective takes into consideration two additional instructor settings to the traditional face-to-face environments that most instructors and trainers know -- that is, online and blended settings. These settings are, of course, becoming more critical as instruction moves beyond classroom settings to include virtual and combinations of classroom and other media delivery methods. The ibstpi instructor competencies match up well to Mapping the Future (Bernthal, Colteryahn, Davis, Naughton, Rothwell, & Wellins 2004), the current ASTD competency study of the field now known as Workplace Learning and Performance (WLP) and previously known as Training and Development (T&D). WLP is more than a new name for an old subject and represents a fundamental paradigm shift in what it means to be a professional in the field formerly known as training. WLP is all about getting improved performance -- and therefore improved results -- in organizational settings through planned and unplanned learning interventions. Instruction is thus a means to an end and not an end in itself. The ibstpi instructor competencies dovetail well with that philosophy.

After the feverish mobilization of secession had faded, why did Southern men join the Confederate army? Kenneth Noe examines the motives and subsequent performance of "later enlistees." He offers a nuanced view of men who have often been cast as less patriotic and less committed to the cause, rekindling the debate over who these later enlistees were, why they joined, and why they stayed and fought. Noe refutes the claim that later enlistees were more likely to desert or perform poorly in battle and reassesses the argument that they were less ideologically savvy than their counterparts who enlisted early in the conflict. He argues that kinship and neighborhood, not conscription, compelled these men to fight: they were determined to protect their families and property and were fueled by resentment over emancipation and pillaging and destruction by Union forces. But their age often combined with their duties to wear them down more quickly than younger men, making them less effective soldiers for a Confederate nation that desperately needed every able-bodied man it could muster. Reluctant Rebels places the stories of individual soldiers in the larger context of the Confederate war effort and follows them from the initial optimism of enlistment through the weariness of battle and defeat.

"In this project Randall Bezanson examines judicial interpretations of free speech by means of a broad range of Supreme Court cases, arguing that over the past 15 years the Court has engaged in a truly revolutionary expansion of the reach of the free speech guarantee. The cases include the much-discussed Citizens United decision which granted the full measure of constitutional protection to speech by corporations; the Doe v. Reed case from Washington State that recognized the acts of signing petitions and voting in elections as acts of free speech; the Summum decision holding that the decision to select a monument for a public park and to reject another based on the government's disagreement with the monument's message is an act of government speech immunized from challenge by the First Amendment; and the Hurley and Dale cases that recognized free speech claims for messages and meanings that arose "out of thin air": speech without an author (a parade); and an author without a message (the Boy Scouts). As in earlier books on freedom of the press and of religion, Bezanson aims to arm the reader with the capacity to reach her or his own decision about whether the Court's conduct befitted the independent judicial branch and the consequences of its decisions for a representative democracy"-- Provided by publisher.

Language Policy and Planning in the Mediterranean World is a collection of the best papers presented at the MedLPLP conference held at the University of Cyprus in 2009, enriched with invited contributions on the same topic. The book presents a panorama of situations with countries such as France, Germany, Cyprus, Malta, Italy, Spain, Poland, Turkey, Greece, Bulgaria, Albania, Romania and Serbia. It explores various aspects of the

weight and ecology of the Mediterranean languages, discusses LPP in the light of international law and the protection of human rights, bilingual education and foreign language acquisition policies. It also addresses the issue of feminization in a broad range of Mediterranean languages comparing French, Italian, Spanish, and, for the first time, Standard and Cypriot Greek. Finally, the book also discusses language revival and renovation policies, language planning in the public space, as well as cases of micro-language management. The volume is an excellent source of information for scholars and students of LPP interested in the synchrony and diachrony of Mediterranean languages, in aspects of LPP activity in various Mediterranean countries and in specific LPP processes involving several languages within the area.

"Fairies Afield" is a children's fantasy story written by Mary Louisa Molesworth, a well-known English children's author in the late nineteenth and early twentieth century. The book, published in 1902, is part of Molesworth's wide body of work, which includes a number of novels and stories for children. The story follows two siblings, Tottie and Tittie, as they go on a fantastic journey into the world of fairies. The children discover a secret road in the woods that leads them to the world of the fairies, where they meet a variety of wonderful creatures and participate in quirky and enchanting adventures. The kids become friends with fairies, elves, and other mystical creatures as they explore this magical realm. Like children's books from the Victorian and Edwardian eras, the story is full with endearing moments and soft moral messages. The narratives of Molesworth highlight kindness, amazement, and inventiveness. "Fairies Afield" perfectly encapsulates the essence of beloved children's books with its themes of friendship, magic, and youthful innocence. For those who appreciate classic stories of magic and adventure, the novel is still enjoyable.

This volume brings together 65 papers which were presented at this Conference, the aim of which was to provide a forum for the exchange of ideas between scholars with expertise in various aspects of the Greek language. For this reason the volume contains the majority of the contributions. It should provide the linguistic community with a comprehensive work presenting the state-of-the-art in Greek Linguistics and covering a wide multidisciplinary spectrum of current research. The papers are organised into six sections. Section I contains the papers of the four invited speakers. George Babiniotis discusses the contribution of linguistic theory to the teaching of Greek, Dimitra Theophanopoulou-Kontou and Angeliki Malikouti-Drachman each present an overview of the relevance of, respectively, syntactic and phonological theories to Greek, and Brian D. Joseph explores a specific theoretical issue, the pro-drop parameter. Section II brings together papers on syntax, semantics and pragmatics which examine theoretical and descriptive issues within current models such as Principles & Parameters, HPSG, Relevance Theory and others. Section III covers phonology and phonetics and also presents research on theoretical issues such as government phonology, the phonology-morphology interface, as well as descriptive issues including the instrumental investigation of selected phonetic phenomena. Section IV covers discourse and style and deals with spoken and written discourse including miscommunication, metaphor and issues on politeness. Section V on variations and extensions consists of papers on Ancient and Modern Greek dialects such as Macedonian, Cypriot, and Pontic, as well as issues on social and geographical varieties, diglossia and language acquisition. Section VI presents papers relating to the use of computers for the analysis, translation and teaching of Greek. Finally, an index of authors, languages and main key words completes the volume.

In this first book-length environmental history of the American Civil War, Lisa M. Brady argues that ideas about nature and the environment were central to the development and success of Union military strategy. From the start of the war, both sides had to contend with forces of nature, even as they battled one another. Northern soldiers encountered unfamiliar landscapes in the South that suggested, to them, an uncivilized society's failure to control nature. Under the leadership of Ulysses S. Grant, William Tecumseh Sherman, and Philip Sheridan, the Union army increasingly targeted

southern environments as the war dragged on. Whether digging canals, shooting livestock, or dramatically attempting to divert the Mississippi River, the Union aimed to assert mastery over nature by attacking the most potent aspect of southern identity and power--agriculture. Brady focuses on the siege of Vicksburg, the 1864 Shenandoah Valley campaign, marches through Georgia and the Carolinas, and events along the Mississippi River to examine this strategy and its devastating physical and psychological impact. Before the war, many Americans believed in the idea that nature must be conquered and subdued. Brady shows how this perception changed during the war, leading to a wider acceptance of wilderness. Connecting environmental trauma with the onset of American preservation, Brady pays particular attention to how these new ideas of wilderness can be seen in the creation of national battlefield memorial parks as unaltered spaces. Deftly combining environmental and military history with cultural studies, *War upon the Land* elucidates an intriguing, largely unexplored side of the nation's greatest conflict.

This sweeping new history recognizes that the Civil War was not just a military conflict but also a moment of profound transformation in Americans' relationship to the natural world. To be sure, environmental factors such as topography and weather powerfully shaped the outcomes of battles and campaigns, and the war could not have been fought without the horses, cattle, and other animals that were essential to both armies. But here Judkin Browning and Timothy Silver weave a far richer story, combining military and environmental history to forge a comprehensive new narrative of the war's significance and impact. As they reveal, the conflict created a new disease environment by fostering the spread of microbes among vulnerable soldiers, civilians, and animals; led to large-scale modifications of the landscape across several states; sparked new thinking about the human relationship to the natural world; and demanded a reckoning with disability and death on an ecological scale. And as the guns fell silent, the change continued; Browning and Silver show how the war influenced the future of weather forecasting, veterinary medicine, the birth of the conservation movement, and the establishment of the first national parks. In considering human efforts to find military and political advantage by reshaping the natural world, Browning and Silver show not only that the environment influenced the Civil War's outcome but also that the war was a watershed event in the history of the environment itself.
