This book aims to assist in choosing ecotechnological solutions for slopes that are prone to a variety of mass movements e.g. shallow failure or erosion. The book reviews the types of problematic slopes that may occur and describes briefly the nature of mass movements and the causes of these movements. There is focus on the use of vegetation to stabilize soil on slopes prone to mass movements. The book also introduces new ecotechnological methods, and case studies are discussed.

This Open Access proceedings presents a good overview of the current research landscape of assembly, handling and industrial robotics. The objective of MHI Colloquium is the successful networking at both academic and management level. Thereby, the colloquium focuses an academic exchange at a high level in order to distribute the obtained research results, to determine synergy effects and trends, to connect the actors in person and in conclusion, to strengthen the research field as well as the MHI community. In addition, there is the possibility to become acquainted with the organizing institute. Primary audience is formed by members of the scientific society for assembly, handling

and industrial robotics (WGMHI). The Editors Prof. Dr.-Ing. Thorsten Schüppstuhl is head of the Institute of Aircraft Production Technology (IFPT) at the Hamburg University of Technology. Prof. Dr.-Ing. Kirsten Tracht is head of the Bremen Institute for Mechanical Engineering (bime) at the University of Bremen. Prof. Dr.-Ing. Annika Raatz is head of the Institute of Assembly Technology (match) at the Leibniz University Hannover.

Ideal for courses on the quarter system and those that combine an MIS text with hands-on software, projects, or case studies. This exceptionally practical text prepares students for the constantly changing demands of using information systems as managers in today's fast-paced organizations. Drawing extensively on examples from real businesses, the authors focus on the increasingly crucial links between information systems and

business value. They present an integrated framework that demonstrates exactly how management, organization, and technology elements interrelate. Next, they use this framework to describe and analyze a wide variety of IS problems and case studies, and to guide students through the books many projects. This Sixth Edition contains extensive new coverage reflecting the latest emerging technical and organizational trends. For example, it contains an entirely new chapter on supply chain management, CRM, enterprise systems, and the latest system platforms for delivering enterprise-wide services. capturing, distributing, and applying organizational knowledge to improve organizational performance and management decision-making. The authors introduce the latest metrics for measuring the business value of IT, and present business-focused coverage of these and other leading-edge technologies: Wi-Fi wireless networks and security; P2P, grid, and utility computing; the next-generation Internet and Semantic Web; Web services and enterprise application integration; business process management; and object oriented modeling. This edition also contains an all-new guide to helping students build structured digital portfolios that demonstrate their skills and knowledge to future employers. Also new in this edition: a Hands-On Guide to MIS providing how-to instructions for designing and normalizing relational databases, using entity-relationship diagrams, constructing SQL queries, modeling business processes, and solving business case studies. software exercises, e-commerce and e-business projects, and four comprehensive projects that require students to solve

demanding problems that arise as firms become more digitally integrated and Internet enabled.

This book highlights the production of green composites from various sustainable raw materials. We now live in an environmentally conscious era, in which sustainable raw materials (renewable, biodegradable, recycled), sustainable processing sequences, the production of recyclable and biodegradable products, and avoiding the depletion of renewable resources are key considerations with regarding to producing any product. The textile sector is no exception. Accordingly, this book addresses these aspects in connection with textiles, and discusses how they can be actively practiced.

With increasing demands for efficiency and product quality plus progress in the integration of automatic control systems in high-cost mechatronic and safety-critical processes, the field of supervision (or monitoring), fault detection and fault diagnosis plays an important role. The book gives an introduction into advanced methods of fault detection and diagnosis (FDD). After definitions of important terms, it considers the reliability, availability, safety and systems integrity of technical processes. Then fault-detection methods for single signals without models such as limit and trend checking and with harmonic and stochastic models, such as Fourier analysis, correlation and wavelets are treated. This is followed by fault detection with process models using the relationships between signals such as parameter estimation, parity equations,

observers and principal component analysis. The treated fault-diagnosis methods include classification methods from Bayes classification to neural networks with decision trees and inference methods from approximate reasoning with fuzzy logic to hybrid fuzzy-neuro systems. Several practical examples for fault detection and diagnosis of DC motor drives, a centrifugal pump, automotive suspension and tire demonstrate applications.
