In recent years there has been growing interest in identifying the social and cultural attributes that

define the Metis as a distinct people. In this groundbreaking study, Brenda Macdougall employs the concept of wahkootowin ♦ the Cree term for a worldview that privileges family and values interconnectedness ♦ to

trace the emergence of a Metis community in northern Saskatchewan. Wahkootowin describes how relationships worked and helps to explain how the Metis negotiated with local economic and religious institutions while nurturing a society that

emphasized family obligation and responsibility. This innovative exploration of the birth of Metis identity offers a model for future research and discussion. *Sacred Books of the Buddhists* Routledge

Public land managers are confronted with an ever-growing & diversifying set of demands for providing recreation opportunities. Coupled with a variety of trends & reduced organizational capacity, these demands represent a significant & complex challenge to public land

mgmt. One way of dealing with this situation is to use a framework to assist in working through this complexity. A framework is a process using a set of steps that assists managers in framing a particular problem, working through it, & arriving at a set of defensible decisions. This report traces the development of each of these frameworks, describes the fundamental premises & concepts used within them, & provides an assessment of the

experience with their use. Illus.

This book reviews the latest research on bioproducts from various economically important insects, such as silkworms, honey bees, lac and drosophila, and termites, and discusses their general, biomedical and industrial applications in detail. It includes chapters focusing on insects as a food source, probiotics, silk-based biomaterials, insect

pheromones, insects as biomedicine source, pupa oil chemistry, non-protein compounds from Lepidopteran insects, insect chitin and chitosan, polyphenols and flavonoids. Model insects like Bombyx mori or bees were domesticated in Asian countries thousands of years ago. Over time, natural products from these animals became industrialized and today they attracting increasing attention thanks to their sustainability and their manifold applications in agriculture and

biomedicine. The book is intended for entomologists, material scientists, natural product researchers and biotechnologists.

Ramsar Wetlands: Values, Assessment, Management

addresses the

approaches, successes

and limitations of the Ramsar Convention in a changing world, how recent approaches to wetland monitoring and management can contribute to improving wetland state, what the future holds for wetlands and their wise use, and what the Ramsar Convention needs to do to achieve future successes. The book presents a unique outlook on a range of issues, addressing considerable advances in our understanding of wetlands, their great environmental, social,

cultural and economic importance, their role in maintaining the global water-cycle, and in mitigating and adapting to changing climates. No other book has yet taken this broad look at the past, present and future of wetlands and the Ramsar Convention. From aquatic ecologists, environmental scientists and engineers, to water resource managers, conservation agencies, and land management planners, this comprehensive guide is a beneficial tool in

understanding wetlands. - Answers questions on the responsibilities and roles of signatory nations to the Ramsar Convention, including how it may deal with ongoing and emerging causes of wetland change - Addresses ongoing challenges of reporting and managing wetland change - Provides a multidisciplinary approach and details the wise use principle that underpins the convention  
Sessional Papers of the Dominion of Canada  
Public land managers are

confronted with an ever-growing and diversifying set of demands for providing recreation opportunities. Coupled with a variety of trends (devolution of governance and decisionmaking, population growth, technological innovation, shifts in public values, economic restructuring) and reduced organizational capacity, these demands represent a significant and complex challenge to public land management. One way of dealing with this situation is to use a framework to

assist in working through this complexity. A framework, for the purpose of this report, is a process using a set of steps, based on sound science, that assists managers in framing a particular problem, working through it, and arriving at a set of defensible decisions. Several such frameworks exist for providing recreation opportunities on public lands. These include the Recreation Opportunity Spectrum, Limits of Acceptable Change, Visitor

Experience and Resource Protection, Visitor Impact Management, and Benefits-Based Management. The report traces the development of each of these frameworks, describes the fundamental premises and concepts used within them, and provides an assessment of the experience with their use. Each of the frameworks has been used with varying success, depending on the organizations will, its technical capacity, the extent to which the

process is inclusive of varying value systems, how open and deliberative the process is, the extent to which the organization is concerned with effectiveness, and the extent to which issues are confronted at the systems level.
