Describes the clinical presentation of
social phobia, discusses theoretical
perspectives on etiology, and surveys
empirically supported treatments used to
treat the disorder. Although social phobia
occurs in children and adults, its
manifestation and treatment differ in
various age groups. The authors describe

the similarities and differences in the
syndrome across all ages. Drawing from
the clinical, social, and developmental
literatures, as well as from their own
extensive clinical experience, the authors
illustrate the impact of developmental
stage on phenomenology, diagnoses, and
assessment and treatment of social
phobia. Within the different age groups,
issues of etiology, prevalence, and clinical
management are presented. The volume
includes many case illustrations and
practical information. This book will be

useful for practitioners, researchers, and
students.

Helping Your Child with Selective Mutism Routledge

IEP Goal Writing for Speech-Language Pathologists: Utilizing State Standards, Second Edition familiarizes the speech-language pathologist (SLP) with specific Early Learning Standards (ELS) and Common Core State Standards (CCSS) as well as the speech-language skills necessary for students to be successful with the school curriculum. It also describes how to write defensible Individualized Education Plan (IEP) goals that are related to the ELS and CCSS. SLPs work through a set of steps to determine a student's speech-language needs. First, an SLP needs to determine what speech-language skills are necessary for mastery of specific standards. Then, the SLP determines what prerequisite skills are involved for each targeted speech-language skill. Finally, there is a determination of which Steps to Mastery need to be followed. It is through this process that an SLP and team of professionals can appropriately develop interventions and an effective IEP. The

text takes an in-depth look at the following speech-language areas: vocabulary, questions, narrative skills/summarize, compare and contrast, main idea and details, critical thinking, pragmatics, syntax and morphology, and articulation and phonological processes. These areas were selected because they are the most commonly addressed skills of intervention for students aged 3 to 21 with all levels of functioning. For each listed area, the text analyzes the prerequisite skills and the corresponding Steps to Mastery. It provides a unique, step-by-step process for transforming the Steps to Mastery into defensible IEP goals. The key is to remember that the goal must be understandable, doable, measurable, and achievable. This text provides clear guidelines of quantifiable building blocks to achieve specific goals defined by the student's IEP. School-based SLPs are instrumental in helping students develop speech and language skills essential for mastery of the curriculum and standards. All SLPs working with school-aged children in public schools, private practice, or outpatient clinics will benefit from the information in this text. New to the Second

Edition: * Ten Speech and Language Checklists for determining speech and language needs of an individual, 3-21 years of age, as well as measuring progress. * Material on measuring progress including five performance updates. * Goal writing case studies for four students of different ages and skill levels. * A thoroughly updated chapter on writing goals with up-to-date examples. * Revised Prerequisite Skills and Steps to Mastery to reflect the current state of research. * Expanded focus on evidence-based practice. Each word is carefully chosen and the style flows with warmth, sensitivity and intelligence. I loved the respect with which the author and Psychologist Ruth Perednik treats the reader; the manual is no less than brilliant in its' ease of explanation and significant in its power as a catalyst for change; Belief and optimism, based on the author's vast clinical experience pervaded throughout. Perednik's clearly detailed program is aimed at parents, teachers and therapists. Perednik has done a wonderful job of increasing the likelihood of successful treatment even in the absence of such ideal conditions. Perednik's apparent wholehearted belief in her approach, tools and program to unravel the knot of selective mutism, leads her to spell out the rationale and implementation of an entire program, thus enabling her readers to carry out a successful treatment

Educating Children with Fragile X Syndrome Routledge

Often described as 'social phobia's cousin' and misdiagnosed as autism, selective mutism is a debilitating fear of speaking in some situations experienced by some children. The disorder usually presents in children before the age of five, but it may not be recognized until the child starts school. When requested to speak, children with selective mutism often look down, blush, or otherwise express anxiety that disrupts their engagement with people and activities. Selective mutism is related to social anxiety and social phobia, and

more than 90 percent of children with selective mutism also manifest symptoms of one of these problems. This book is the first available for parents of children with selective mutism. It offers a broad overview of the condition and reviews the diagnostic criteria for the disorder. The book details a plan you can use to coordinate professional treatment of your child's disorder. It also explains the steps you can take on your own to encourage your child to speak comfortably in school and in his or her peer group. All of the book's strategies employ a gradual, 'stepladder' approach. The techniques gently encourage children to speak more, while at the same time helping them feel safe and supported. Angela E. McHolm, Ph.D., is director of the Selective Mutism Service at McMaster Children's Hospital in Hamilton, ON. The Selective Mutism Service offers outpatient psychiatric consultation to families and professionals such as school personnel, speech and language pathologists, and mental health clinicians who support children with selective mutism. She is assistant professor in the Department of Psychiatry and Behavioural Neurosciences in the

Faculty of Health Sciences at McMaster University in Hamilton, ON.
